

SOUTHERN CROSS WIND FARM

FLORA AND VEGETATION SURVEY

Prepared for: Southern Cross Wind Pty Ltd

Report Date: 19 January 2024

Version: 2

Report No. 2023-797

The logo for PGV Environmental is located in the bottom right corner of the page. It features the letters 'PGV' in a large, bold, white sans-serif font. Below 'PGV', the word 'ENVIRONMENTAL' is written in a smaller, white, all-caps sans-serif font. The background of the logo area is a vibrant orange with a subtle, curved white line that sweeps across the bottom of the page.

1 INTRODUCTION

1.1 Background

Southern Cross Wind Pty Ltd is proposing to construct a wind farm on farming land located near Ghooli in the Shire of Southern Cross, approximately 14km south-east of Southern Cross (Figure 1). The construction of the wind farm requires the installation of a new powerline. The power line route is shown in Figure 2 and will run alongside Glendower Road in the road reserve. The route is approximately 8km long with the western 4km running through a vegetated reserve from the Southern Cross - Marvel Loch Road and the eastern 4km running through farm land (Figure 2).

This Flora and Vegetation Survey has been commissioned by Southern Cross Wind Pty Ltd to assess the environmental values and impacts of the proposed installation of the power line. The survey also assessed the flora and vegetation at the intersection of Glendower Road and Ghooli South Road which is likely to be used as a new access way onto the site.

1.2 Scope of Works

A Detailed Flora and Vegetation Survey was undertaken in accordance with the *EPA Technical Guidance: Flora and Vegetation Surveys* (EPA, 2016). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority flora database;
- A search of Atlas of Living Australia for records of Threatened or Priority species;
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act);
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Targeted survey for orchids in accordance with *Draft Survey Guidelines for Australia's Threatened Orchids Guidelines for Detecting Orchids Listed as 'Threatened' under the Environment Protection and Biodiversity Conservation Act 1999 Australia* (Commonwealth of Australia, 2013);
- Analysis of quadrat data to ascertain the conservation significance of the vegetation;
- Recording of any significant plant species using a hand-held GPS;
- Description and mapping of vegetation types and vegetation condition; and
- Compilation of a flora list.

2 EXISTING ENVIRONMENT

2.1 Land Use

The current status of the Glendower road reserve is very similar to that shown in the earliest aerial photograph from 1999 (Plate 1) (Landgate, 2023). Glendower Road services some mining areas either side of the road and located in the reserve. The extent of the mining footprint has increased since 1999.

Plate 1: Aerial Photograph from 1999 (Landgate, 2023)

2.2 Topography

The site is gently undulating. The northern half of the site generally slopes down a high of 396m Australian Height Datum (AHD) at the northern end down from the northern extent at to 372m AHD at the southern end of the agricultural area (Figure 2). The elevation of the western half through the reserve ranges from 388m AHD to 380m AHD.

2.3 Geomorphology and Soils

The site is mapped on Big Bell Suite, made up of metagranite which is commonly foliated and includes granodiorite to monzogranite on the eastern part of the site and Youanmi Terrane greenstones which is metamorphosed mafic igneous rock (National Map, 2023). The soil phases mapped on the site are:

- Buladagie 3 Undifferentiated phase (261Bd_3u) which is described as undifferentiated (DPIRD, 2023);
- Garratt 1Qa phase (261Gt_1Qa) described as alluvial flats adjacent to salt lakes in the eaten Zone of Ancient Drainage. The soils are loamy earth (mostly calcareous), hard cracking clay and alkaline shallow duplex (DPIRD, 2023);

- Garratt 1Qc phase (261Gt_1Qc) which are the lower slopes and footslopes adjacent to salt lakes in the eastern Zone of Ancient Drainage (DPIRD, 2023);
- Greenmount 3 subsystem (261Gr_3) which are rolling low hills in the eastern Zone of Ancient Drainage and are loamy earth (mostly calcareous) and clay (DPIRD, 2023); and
- Greenmount, Perilya subsystem (261GrPE) which are on tributary valley floors on greenstone, in the Southern Cross Zone made up of calcareous loamy earths and shallow duplex (DPIRD, 2023).

2.4 Hydrology

Groundwater is at depth and there are no wetlands, permanent waterbodies or drainage channels on the alignment (National Map, 2023).

3 METHODOLOGY

3.1 Previous Surveys

A desktop Flora and Fauna Assessment of the proposed wind farm, including the eastern half of the power line route, was undertaken by Ecoscape for Yilgarn Holdings (Ecoscape, 2023). The desktop assessment included a review of DBCA databases for Threatened and Priority flora and Threatened and Priority ecological communities (TECs and PECs).

Ecoscape found that four Priority 3 plant species had been recorded within the footprint of the wind farm, but not along the eastern half of the power line route. The species were:

- *Acacia desertorum* var. *nudipes*;
- *Balaustion grandibracteatum* subsp. *grandibracteatum*;
- *Stylidium choreanthum*; and
- *Verticordia mitodes*.

No TECs or PECs were mapped in the footprint of the wind farm, however Ecoscape commented that the native vegetation remnants have not been suitably investigated for TEC composition.

3.2 Database Searches

A search of the DBCA Threatened and Priority Flora Databases including the WA Herbarium database (WAHerb) and Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 3) for a radius of 25 km that provides a list of Threatened and Priority species recorded in the area was undertaken by Ecoscape in 2023 (Appendix 1).

Additionally searches of the following databases have been undertaken:

- Atlas of Living Australia (ALA, 2023) (Appendix 2) which shows all species that have been recorded within a 10km radius of the site.
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2023) (Appendix 3) which identifies species that are listed as Endangered, Threatened or Priority under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) could potentially have habitat within a 5km radius of the site.

3.3 Detailed Survey

A Detailed Flora and Vegetation Survey including a Targeted Survey for spring flowering orchids was undertaken by PGV Environmental on 28 and 29 September 2023. The track log is shown on Plate 2.

Plate 2: Track Log

Information on flora composition and vegetation structure was recorded in ten temporary 20m x 20m quadrats located in representative vegetation types.

Where possible, plant species were identified in the field. Some specimens were photographed or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

3.4 Survey Conditions

The conditions that the survey was undertaken in are presented in Table 1 in order to assess the adequacy of the survey. Rainfall for Perth (Measured at Southern Cross Airfield, Site Number 012320) was slightly below average in June being 25.2mm compared to 26.7mm and below average in July being 12.4mm compared to an average of 34.1 mm. Rainfall was slightly below average in August and September being 25.6mm and 19.2mm compared to 34.1mm and 19.7mm (BOM, 2023). The below average rainfall from July to September meant that the spring season was short but was not dry enough to impact on germination or flowering and therefore is not considered to be a constraint on the survey.

Table 1: Statement of Botanical Survey Conditions

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has botanical survey experience in the Goldfields area including around Southern Cross.
Proportion of the flora identified [^]	No	The timing of the survey in late September was optimal to identify most flora species on the site including all potential Threatened and Priority Flora. No follow-up survey required.
Sources of information (historic/recent or new data)	No	The flora of the Goldfields area is fairly well documented.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The mid-spring survey was optimal for most flora species. 2023 was a good year for ephemeral species early in the season. The late dry spring did not impact on the potential recording of any conservation significant species.
Disturbances (Fire)	No	The site has not been burnt for many years
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	The time spent on site, approximately 15 hours was considered adequate to sample a high proportion of the flora given the relatively small size of the site.
Completeness (e.g. was relevant area fully surveyed)	No	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook most plant identifications on site.
Remoteness and/or access problems	No	Easily accessible site along Glendower Road. Road reserve vegetation very open and easily walked through.
Availability of contextual (e.g. bioregional) information for the study area.	No	WALGA statistics on remnant bushland

*Constraints have been rated as Significant, Moderate or No constraints

[^]Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

4 RESULTS

4.1 Desktop Studies

4.1.1 Flora Database Searches

The results of the database searches and their likelihood to occur on the site is outlined in Table 2.

In summary, habitat for the following species has been identified as possibly being on the site:

- *Eucalyptus crucis* subsp. *crucis* (Silver Mallee), Endangered;
- *Chamelaucium* sp. Parker Range (B.H. Smith 1255), Priority 1;
- *Eucalyptus calycogona* subsp. *miraculum* (Marvel Mallee), Priority 1;
- *Eucalyptus* sp. Dunbar Road (D. Nicolle & M. French DN 5466), Priority 1;
- *Goodenia heatheriana*, Priority 1;
- *Millotia newbeyi*, Priority 1;
- *Balaustion grandibracteatum* subsp. *junctura*, Priority 1;
- *Eutaxia lasiocalyx*, Priority 2;
- *Acacia desertorum* var. *nudipes*, Priority 3;
- *Acacia filifolia*, Priority 3;
- *Balaustion grandibracteatum* subsp. *grandibracteatum*, Priority 3;
- *Rinzia triplex* (Triad Rinzia), Priority 3; and
- *Grevillea neodissecta*, Priority 4.

None of the species identified have been previously recorded on the site and all species were identifiable at the time of the survey.

Conservation codes are in Appendix 4

Table 2: Identified Significant Flora Species and Likelihood of Occurring on the Site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Acacia leptoneura</i>		Critically Endangered	Critically Endangered	<i>Acacia leptoneura</i> is currently known from a single area northeast of Dowerin on a low rise on grey/white sandy loam over laterite and low lateritic ridge on brown sandy loam over laterite (DEC, 2012).	No – not in species range and record in error
<i>Dasymalla axillaris</i>	Native Foxglove	Critically Endangered	Critically Endangered	The Native Foxglove is known from sandy soils in the Yalgoo area of the northern area of the Avon Wheatbelt.	Highly Unlikely – not in species range and recorded within 10km
<i>Daviesia microcarpa</i>	Norseman Pea	Critically Endangered	Endangered	The Norseman Pea occurs in weathered gravel.	Possible – habitat may occur on the site
<i>Isopogon robustus</i>	Robust Coneflower	Critically Endangered	Critically Endangered	Robust Coneflower prefers skeletal grey sandy loam, laterite on ridges.	Unlikely – not typical habitat
<i>Eremophila viscida</i>	Varnish Bush	Endangered	Endangered	Varnish Bush occurs in granitic soils, sandy loam in stony gullies, sandplains.	Unlikely – not typical habitat
<i>Eucalyptus crucis</i> subsp. <i>crucis</i>	Silver Mallee	Endangered	Vulnerable	The Silver Mallee occurs in sand, loam with granite outcrops.	Possible – habitat may occur on the site
<i>Frankenia parvula</i>	Short-leaved Frankenia	Endangered	Endangered	The Short-leaved Frankenia occurs on sandy rises near saline drainage lines and salt lake edges	Highly Unlikely – not suitable habitat
<i>Philotheca falcata</i>	Sickle-leaved Waxflower	Endangered	Critically Endangered	Sickle-leaved Waxflower occurs in Mulga (<i>Acacia aneura</i>) shrubland on rocky slopes of red skeletal laterite.	Unlikely – not typical habitat
<i>Banksia dolichostyla</i> (listed as <i>Banksia sphaerocarpa</i> var. <i>dolichostyla</i> under the EPBC Act)	Ironcaps Banksia, Ironcap Banksia	Vulnerable	Vulnerable	Ironcaps Banksia occurs in lateritic gravel, grey sand.	Highly Unlikely – not suitable habitat
<i>Daviesia elongata</i>	Long-leaved Daviesia	Vulnerable	Vulnerable	Long-leaved Daviesia prefers sandy soils.	No – record in error – species occurs in the south-west
<i>Chamaelaucium</i> sp. Parker Range (B.H. Smith 1255)		Priority 1		<i>Chamaelaucium</i> sp. Parker Range occurs in dry yellow gravelly sand over laterite (Western Australian Herbarium, 2011).	Possible – habitat may occur on the site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Eucalyptus calycogona</i> subsp. <i>miraculum</i>	Marvel Mallee	Priority 1		Marvel Mallee occurs in mallee and mixed mallee-mallet vegetation on pale orange to red clay-loams to thin stony loams with ironstone gravel (Nicolle and French, 2009).	Possible – habitat may occur on the site
<i>Eucalyptus</i> sp. Dunbar Road (D. Nicolle & M. French DN 5466)		Priority 1		<i>Eucalyptus</i> sp. Dunbar Road occurs in calcareous red to grey loams with <i>Eucalyptus salubris</i> .	Possible – habitat may occur on the site
<i>Goodenia heatheriana</i>		Priority 1		<i>Goodenia heatheriana</i> occurs in red crumbly clay, greenstone gravel and cobbles on lower slopes, moderately exposed gently undulating plain, roadsides.	Possible – habitat may occur on the site
<i>Grevillea lissopleura</i>		Priority 1		<i>Grevillea lissopleura</i> occurs in stony loam on banded ironstone on ridges.	Highly Unlikely – no banded ironstone habitat
<i>Grevillea phillipsiana</i>		Priority 1		<i>Grevillea phillipsiana</i> grows in red sand, stony loam on granite hills.	Highly Unlikely – no suitable habitat
<i>Hemigenia</i> sp. Newdegate (E. Bishop 75)		Priority 1		<i>Hemigenia</i> sp. Newdegate occurs in clay loam on disturbed sites.	Unlikely – not typical habitat
<i>Hydrocotyle corynophora</i>		Priority 1		<i>Hydrocotyle corynophora</i> occurs in red-brown cracking clay loam on a network of wet depressions on flat hill top (Western Australian Herbarium, 2015).	Highly Unlikely – not suitable habitat
<i>Lepidosperma</i> sp. Mt Caudan (N. Gibson & M. Lyons 2081)		Priority 1		<i>Lepidosperma</i> sp. Mt Caudan was recorded in skeletal grey sandy loam, over massive ironstone with ironstone gravel and cobbles (Western Australian Herbarium, 1994).	Highly Unlikely – not suitable habitat
<i>Lepidosperma</i> sp. Parker Range (N. Gibson & M. Lyons 2094)		Priority 1		<i>Lepidosperma</i> sp. Parker Range is recorded from a ridge/slope in well-drained dry brown clay loam over granite (Western Australian Herbarium, 2013).	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Leucopogon</i> sp. Yellowdine (M. Hislop & F. Hort MH 3194)		Priority 1		<i>Leucopogon</i> sp. Yellowdine was recorded on a flat in moist yellow sand that has been burnt >5 years (Western Australian Herbarium, 2015).	Highly Unlikely – not suitable habitat
<i>Leucopogon validus</i>		Priority 1		<i>Leucopogon validus</i> occurs in dry, brown, rocky sandy loam, brown-orange sandy clay, gravel, ironstone, sandstone on low ranges, on and around exposed breakaways.	Highly Unlikely – not breakaway habitat
<i>Melichrus</i> sp. Coolgardie (K.R. Newbey 8698)		Priority 1		<i>Melichrus</i> sp. Coolgardie is recorded from a flat in yellow sand (Western Australian Herbarium, 2009).	Highly Unlikely – not yellow sand habitat
<i>Millotia newbeyi</i>		Priority 1		<i>Millotia newbeyi</i> occurs in red/brown loam, red clay on undulating plains.	Possible – habitat may occur on the site
<i>Rinzia fimbriolata</i>	Wheatbelt Rinzia	Priority 1		Wheatbelt Rinzia is recorded from sandy soil in mallee shrubland or woodland, also with one record from 'clay soil with quartz pieces' (Rye, 2017).	Unlikely – not typical habitat
<i>Rinzia medifila</i>	Parker Range Rinzia	Priority 1		Parker Range Rinzia Recorded in yellowish or reddish sandy soils, sometimes with laterite or greenstone, in Eucalyptus woodlands, often with <i>Melaleuca</i> (Rye, 2017).	Unlikely – not typical habitat
<i>Verticordia elizabethiae</i>	Elizabeth's Featherflower	Priority 1		Elizabeth's Featherflower growing on flats surrounding salt lakes, with halophytic heath (e.g. <i>Maireana</i> , <i>Gunnipopsis</i> and <i>Frankenia</i>) and fringing <i>Callitris</i> (Rye and Barrett, 2020)..	Highly Unlikely – not saline habitat
<i>Balaustion grandibracteatum</i> subsp. <i>junctura</i>		Priority 1		<i>Balaustion grandibracteatum</i> subsp. <i>junctura</i> occurs in sandy soils, sometimes with lateritic gravel or granite cobbles, in shrublands commonly dominated by <i>Acacia</i> , <i>Allocasuarina</i> or <i>Eucalyptus</i> species (Rye, 2022).	Possible – habitat may occur on the site
<i>Calectasia grandiflora</i>	Blue Tinsel Lily	Priority 2		Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges.	No – record is in error species occurs on the Swan Coastal Plain
<i>Eutaxia lasiocalyx</i>		Priority 2		<i>Eutaxia lasiocalyx</i> grows in red sandy loam, laterite and quartz gravel on gentle lower slopes.	Possible – habitat may occur on the site
<i>Lissanthe scabra</i>		Priority 2		<i>Lissanthe scabra</i> grows in dry, white to orange-brown clay, sandy gravel loams, granite on breakaways, uplands.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Rinzia rubra</i>	Red-based Rinzia	Priority 2		Red-based Rinzia occurs in Frank Hann National Park and Bremer Range, in sandy soils with vegetation dominated by Eucalyptus mallee scrublands or woodlands (Rye, 2017).	No – record in error and outside of species range
<i>Verticordia dasystylis</i> subsp. <i>dasystylis</i>		Priority 2		<i>Verticordia dasystylis</i> subsp. <i>dasystylis</i> grows in granitic sand or clay loam near granite rocks.	No – record in error and outside of species range
<i>Verticordia multiflora</i> subsp. <i>solox</i>		Priority 2		<i>Verticordia multiflora</i> subsp. <i>solox</i> grows in yellow sand over gravel, sand over granite.	Highly Unlikely – not suitable habitat
<i>Verticordia pulchella</i>		Priority 2		<i>Verticordia pulchella</i> grows in sandy soils over granite in massive granite areas.	Highly Unlikely – not suitable habitat
<i>Acacia desertorum</i> var. <i>nudipes</i>		Priority 3		<i>Acacia desertorum</i> var. <i>nudipes</i> grows in yellow sand, lateritic gravel on sandplains, flats.	Possible – habitat may occur on the site
<i>Acacia filifolia</i>		Priority 3		<i>Acacia filifolia</i> grows in yellow sand, gravelly lateritic sand on sandplains.	Possible – habitat may occur on the site
<i>Acacia formidabilis</i>		Priority 3		<i>Acacia formidabilis</i> grows in yellow or red/brown sand on undulating plains, hillsides.	Unlikely- not typical habitat
<i>Balaustion grandibracteatum</i> subsp. <i>grandibracteatum</i>		Priority 3		<i>Balaustion grandibracteatum</i> subsp. <i>grandibracteatum</i> grows in yellow-brown sand, laterite, gravel on moderately exposed flat sand plains (Rye, 2022).	Possible – habitat may occur on the site
<i>Bossiaea</i> sp. Jackson Range (G. Cockerton & S. McNee LCS 13614)		Priority 3		<i>Bossiaea</i> sp. Jackson Range is recorded from low banded ironstone hill, growing on duricrust (Western Australian Herbarium, 2006).	Highly Unlikely- not banded ironstone habitat
<i>Cryptandra crispula</i>		Priority 3		<i>Cryptandra crispula</i> grows in brown sandy clay, yellow loamy sand, red soil, pebbles on dune ridges, hills, near salt lakes.	Highly Unlikely – no salt lake habitat
<i>Eucalyptus polita</i>	Parker Range Mallee	Priority 3		Parker Range Mallee occurs in loam and sand around salt lakes on flats.	Highly Unlikely – no salt lake habitat
<i>Eutaxia rubricarina</i>		Priority 3		<i>Eutaxia rubricarina</i> grows in gravelly sand, grey to pinkish-white sandy clay, red loam on flats, slopes, valley floors, road verges.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Hakea pendens</i>		Priority 3		<i>Hakea pendens</i> occurs in stony loam on ironstone ridges.	Highly Unlikely – no ironstone ridge habitat
<i>Lepidium genistoides</i>		Priority 3		<i>Lepidium genistoides</i> occurs in sandy loam.	Unlikely – not typical habitat
<i>Microseris walteri</i>		Priority 3		<i>Microseris walteri</i> grows in sandy soils on margins of salt lakes, granite rock areas, samphire flats.	Highly Unlikely – no salt lake habitat
<i>Notisia intonsa</i>	Shaggy Gnephosis	Priority 3		Shaggy Gnephosis grows in red/brown clay, stony saline loam.	Unlikely – not saline habitat
<i>Phlegmatospermum eremaeum</i>		Priority 3		Phlegmatospermum eremaeum occurs in stony loam.	
<i>Prostanthera nanophylla</i>		Priority 3		<i>Prostanthera nanophylla</i> grows in yellow sand over laterite, rocky loam on sandplains.	Unlikely – not typical habitat
<i>Rinzia torquata</i>	Necklace Rinzia	Priority 3		Necklace Rinzia occurs in yellow sand or lateritic habitats, sometimes with some clay, often in vegetation dominated by mallees, <i>Acacia</i> , <i>Allocasuarina</i> and <i>Melaleuca</i> (Rye, 2017).	Unlikely – not typical habitat
<i>Rinzia triplex</i>	Triad Rinzia	Priority 3		Triad Rinzia occurs on sandy plains in yellow to red, often gravelly or lateritic soils, with one record mentioning fragments of banded ironstone, dominated by <i>Acacia</i> , <i>Eucalyptus</i> or <i>Allocasuarina</i> , often with <i>Baeckea eldieriana</i> present (Rye, 2017).	Possible – habitat may occur on the site
<i>Stylidium choreanthum</i>	Dancing Triggerplant	Priority 3		Dancing Triggerplant grows in white/yellow or red sand on plains.	Unlikely – not typical habitat
<i>Stylidium pulviniforme</i>		Priority 3		<i>Stylidium pulviniforme</i> grows in white sand on winter-wet areas.	Highly Unlikely – not suitable habitat
<i>Teucrium diabolicum</i>	Devil's Germander	Priority 3		Devil's Germander grows in red cracking clay or clay loam, usually in shallow depressions or on low undulating plains that support low scrub or heath, or in association with low open woodland (e.g. with <i>Eucalyptus tenuis</i>) (Wege and Davis, 2020).	Unlikely – not typical clay habitat
<i>Verticordia mitodes</i>		Priority 3		<i>Verticordia mitodes</i> grows in yellow sand on undulating plains.	Highly Unlikely – not suitable habitat
<i>Verticordia stenopetala</i>		Priority 3		<i>Verticordia stenopetala</i> grows in yellow sand, sometimes with gravel on undulating plains.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Acacia merrickiae</i>		Priority 4		<i>Acacia merrickiae</i> occurs in sandy loam, clay, yellow sand.	No – record in error, no records within 100km
<i>Eremophila inflata</i>	Swollen-flowered Eremophila	Priority 4		Swollen-flowered Eremophila grows in clay loam with ironstone gravel on flats, disturbed sites.	Highly Unlikely – not suitable habitat
<i>Grevillea neodissecta</i>		Priority 4		<i>Grevillea neodissecta</i> occurs in sand over laterite, clay loam.	Possible – habitat may occur on the site
<i>Microcorys</i> sp. Forrestania (V. English 2004)		Priority 4		<i>Microcorys</i> sp. Forrestania grows in yellow sandy clay or red-brown clay in open woodland or cleared areas.	Unlikely – not typical clay habitat
<i>Stenanthemum bremerense</i>		Priority 4		<i>Stenanthemum bremerense</i> grows in orange-brown sandy loam, orange-red gravelly loam, skeletal red loam, laterite, ironstone on top or sides of outcrops and breakaways.	Highly Unlikely – not suitable habitat

* sourced from Florabase as well as the DBCA database searches unless otherwise denoted

4.1.2 TEC/PEC Database Searches

Table 3 outlines the State and Commonwealth listed TECs and PECs that have been recorded in the vicinity of the site (Ecoscape, 2023).

Table 3: Recorded Threatened and Priority Ecological Communities

Ecological Community	Conservation Status WA	Status under the EPBC Act
Highclere Hills (Mayfield) vegetation complex (banded ironstone formation)	Priority 1	
Koolyanobbing vegetation complex (banded ironstone formation)	Priority 1	
Duladgin Quartzite Ridge	Priority 3	
Eucalypt woodlands of the Western Australian Wheatbelt	Priority 3	Critically Endangered
Granite outcrop pools with endemic aquatic fauna	Priority 3	
Plant assemblages of the Parker Range System	Priority 3	

The site does not contain banded ironstone, quartzite ridges, granite outcrop pools or is on the Parker Range System, therefore five of the six PECs do not occur on the site. Further investigation into the potential for the *Eucalypt woodlands of the Western Australian Wheatbelt* to occur on the site is in Section 4.4.3.

4.2 Flora

A total of 70 plant species were recorded during the flora survey (Appendix 5). The total consisted of 63 native species and 7 (10%) introduced species.

The plant Families with the highest representation of species were the Myrtaceae (Myrtle family – 13 species, all native), Asteraceae (Daisy family – 10 species, 7 native, 3 introduced), Chenopodiaceae (Chenopod family – 8 species, all native), Fabaceae (Wattle and Pea family – 7 species, all native) and Poaceae (Grass family – 6 species, 4 native and 2 introduced).

No Threatened or Priority species were recorded on the site.

Species richness in the ten quadrats ranged from 7-13 (av. 9.9). The average number of weeds in the ten quadrats was 0.2 (with eight quadrats recording no weeds and two quadrats recording one weed species) and averaged 1.8% of species in the quadrats (Appendix 6).

4.3 Vegetation

4.3.1 Biogeographic Region

Biogeographic regions of Western Australia are defined in the Interim Biogeographical Regionalisation for Australia (IBRA) and are defined on the basis of climate, geology, landform, vegetation and fauna.

The site is located in the Coolgardie IBRA region (C002 Southern Cross subregion).

4.3.2 Pre-European Vegetation Association

The Pre-European vegetation of Western Australia was mapped by Beard in the 1970s at a very broad scale of 1:1,000,000 in remote areas of the State. The vegetation association mapped on the site is:

Yilgarn_1068 which is described as *Medium woodland; salmon gum, morrel, gimlet & Eucalyptus sheathiana*

4.3.3 Vegetation Types

Seven vegetation types were described and mapped on the site (Figure 3).

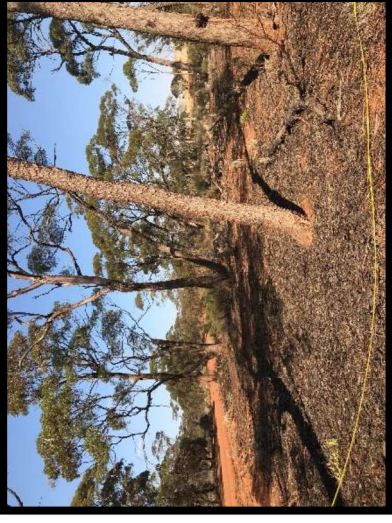

The vegetation types are described in Table 4. Quadrat Data are in Appendix 6.

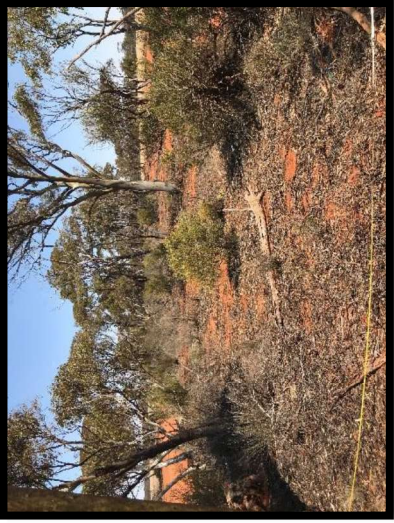

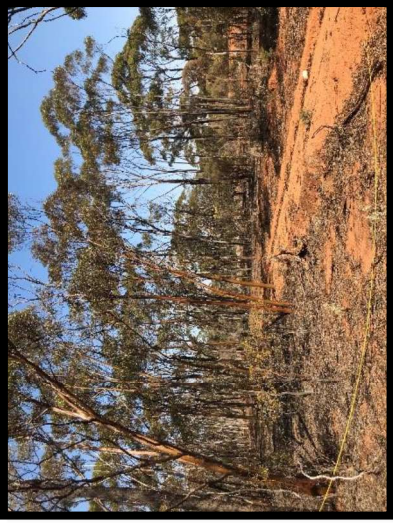

The vegetation at the southern end of the Glendower Road and Ghooli South Road intersection was found to be mostly grassy weeds and a few native shrubs and grasses with no trees (Plate 3). Native species observed were *Olearia muelleri*, *Austrostipa elegantissima*, *Ptilotus obovatus*, *Atriplex vesicaria* and *Accia merrallii*. None of these species is a Threatened or Priority species. The condition is Completely Degraded.

Plate 3: Intersection of Glendower and Ghooli South Road

Table 4: Vegetation Types on the Site

Vegetation Type	Description	Photograph
<p>Es <i>Eucalyptus salmonophloia</i> Low Woodland over <i>Eremophila scoparia</i>/<i>E. oppositifolia</i> Low Shrubland</p>	<p>A short section of this vegetation type occurs at the northern end of the site. <i>Eucalyptus salmonophloia</i> (Salmon Gums) are sparse and up to 15m high over an open, low understory with common species being <i>Eremophila scoparia</i>, <i>Eremophila oppositifolia</i>, <i>Atriplex vesicaria</i> and <i>Acacia merrallii</i>. The soils are orange sandy loam. Quadrat SC1 is representative of this vegetation type.</p>	
<p>EIEs <i>Eucalyptus loxophleba</i>/<i>E. salmonophloia</i> Woodland</p>	<p>This is the dominant vegetation type on the site, occurring in the western area through the reserve. <i>Eucalyptus loxophleba</i> is usually more dominant than <i>E. salmonophloia</i> with both species ranging from 15-25m high. The understory is low and open with common species <i>Eremophila scoparia</i>, <i>Olearia muelleri</i>, <i>Acacia merrallii</i> and occasionally <i>Melaleuca lanceolata</i>. The soils are orange-brown sandy loam. Quadrats SC5, SC6, SC8 and SC9 are representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
<p>EsEley <i>Eucalyptus salmonophloia</i> /<i>E. loxophleba</i>/<i>E. yilgarnensis</i> Woodland</p>	<p>A short section of this vegetation type occurs at the southern end of the route through the farmland area. Similar to the EIEs vegetation type but with the mallee species <i>Eucalyptus yilgarnensis</i> also common to 5m high. Species in the low, open understorey include <i>Phebalium</i> sp, <i>Austrostipa elegantissima</i>, <i>Exocarpos aphyllus</i>, <i>Eremophila scoparia</i> and <i>Acacia merrallii</i>.</p> <p>The soils are orange-brown sandy loam.</p> <p>Quadrat SC10 is representative of this vegetation type.</p>	
<p>EIEsp <i>Eucalyptus loxophleba</i>/<i>Eucalyptus spathulata</i> Woodland</p>	<p>This vegetation type occurred in the middle section through the reserve. <i>Eucalyptus spathulata</i> was more common than <i>E. loxophleba</i> but smaller at 12m high. Mid-storey shrubs included <i>Melaleuca lanceolata</i> and <i>Santalum acuminatum</i>. The lower shrubs and ground cover were very sparse.</p> <p>The soils are orange-brown sandy loam.</p> <p>Quadrat SC7 is representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
<p>Ey <i>Eucalyptus yilgarnensis</i> Low Woodland over <i>Melaleuca hamata</i> Tall Open Shrubland</p>	<p>Similar to the EsEIEy vegetation type but with only <i>Eucalyptus yilgarnensis</i> mallees present. Occurs in the southern half of the section of the route through the agricultural land. Shrubs are almost absent, with the native grass <i>Bromus arenarius</i> the most common species.</p> <p>The soils are orange sandy loam.</p> <p>Quadrat SC4 is representative of this vegetation type.</p>	
<p>EspAa <i>Eucalyptus spathulata</i> Low Woodland over <i>Acacia acuminata</i> Tall Shrubland</p>	<p>This vegetation type occurs in the northern part of the site on shallow loam over granite soils. <i>Eucalyptus spathulata</i> trees are up to 10m high and around 20% canopy cover over a prominent tall shrub cover of <i>Acacia acuminata</i> (Jam) 4-5m high. The lower shrub and groundcover is almost absent with <i>Austrostipa elegantissima</i> fairly common.</p> <p>The soils are orange-brown sandy loam over granite.</p> <p>Quadrat SC3 is representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
<p>Aa <i>Acacia acuminata</i> Tall Shrubland</p>	<p>Recorded near the northern part of the site on soils with some fine granite at the surface. <i>Acacia acuminata</i> shrubs are 3-4m high and moderately dense at around 30%. Ephemeral species recorded on this soil type but nowhere else on the site included <i>Siemssenia capillaris</i>, <i>Brachycome ciliaris</i>, <i>Waitzia acuminata</i> subsp. <i>acuminata</i> and <i>Borya sphaerocephala</i>.</p> <p>The soils are orange sandy loam with granite at the surface. Quadrat SC2 is representative of this vegetation type.</p>	

4.3.4 Vegetation Condition

The condition of the vegetation was assessed according to the system devised by Keighery and described in Bush Forever (Government of Western Australia, 2000) (Table 5).

Table 5: Vegetation Condition Rating Scale.

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: Government of Western Australia, 2000.

The vegetation condition in the road reserve through the cleared agricultural areas was rated as Very Good as although there were very few weeds the understorey has been impacted by grazing. The areas through bushland reserve were rated as Excellent as there were very few signs of disturbance (Figure 4).

4.4 Conservation Significance of Flora and Vegetation

4.4.1 Flora

No Threatened or Priority species were recorded on the site or are expected to occur in any other season.

4.4.2 Vegetation Association

The area remaining in the Shire of Southern Cross of the vegetation association on the site is outlined in Table 6 (DBCA, 2014).

Table 6: Vegetation Association Statistics

Vegetation Association	Pre-European Extent	Remaining		Remaining in Secure Tenure	
	Area (ha)	Area (ha)	%	Area (ha)	%
Yilgarn 1068	67,865.16	21,412.37	31.55	41.23	0.06

The percentage remaining is above EPA's 30% minimum criteria for vegetation complexes.

4.4.3 Threatened and Priority Ecological Communities

The TEC/PEC database search ruled out five of the six ecological communities that were identified in the search on the basis that either the soil type or landform were not present on the site. The search considered there was a possibility that the Eucalypt woodlands of the Western Australian Wheatbelt TEC could occur on the site.

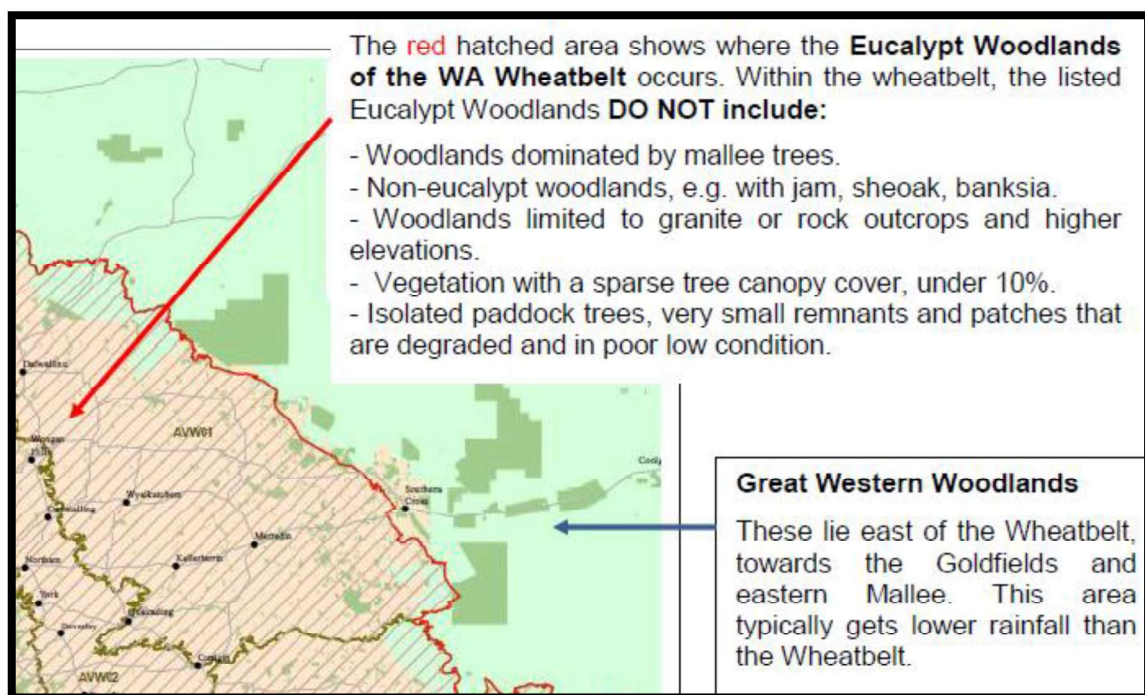

The Eucalypt woodlands of the Western Australian Wheatbelt ecological community was listed as Critically Endangered under the EPBC Act in December 2015.

According to the Key Diagnostic Characteristics for the Ecological Community contained within the Approved Conservation Advice for the Eucalypt woodlands of the Western Australian Wheatbelt (TSSC, 2015), a patch of the ecological community is limited to the following IBRA bioregions and subregions:

- Avon Wheatbelt (subregions AVW01 and AVW02);
- Mallee (MAL02 Western Mallee only); and
- Jarrah Forest (JAF01 and JAF02 eastern parts that are off the Darling Range and adjacent to the Avon Wheatbelt).

The power line route is within the Coolgardie C002 IBRA sub-region and therefore does not meet the first key diagnostic characteristic to be the Eucalypt woodlands of the Western Australian Wheatbelt TEC. Plate 4 taken from the Commonwealth Government information guide for the Eucalypt woodlands of the Western Australian Wheatbelt (TSSC, 2015) shows that Southern Cross and the linear strip of bushland reserve that the power line route traverses is outside the mapped area for the TEC and is within the area mapped as Great Western Woodlands.

Plate 4: Map of the Eucalypt woodlands of the Western Australian Wheatbelt

Furthermore, while the Eucalypts on the site are similar to those listed as occurring in the Eucalypt woodlands of the Western Australian Wheatbelt TEC, the Conservation Advice for the TEC states that:

Woodlands that have the same key eucalypt species but occur in adjacent bioregions, notably the Coolgardie, Esperance Sandplains, Yalgoo and Geraldton Sandplains bioregions are not part of the national ecological community. All woodlands that occur in bioregions outside the wheatbelt, as defined in this conservation advice, are not part of the WA Wheatbelt Woodland ecological community (TSSC, 2015).

5 SUMMARY

The Flora and Vegetation Survey of the proposed alignment for the Southern Cross Wind Farm powerline, subject to the Flora and Vegetation Survey found the following:

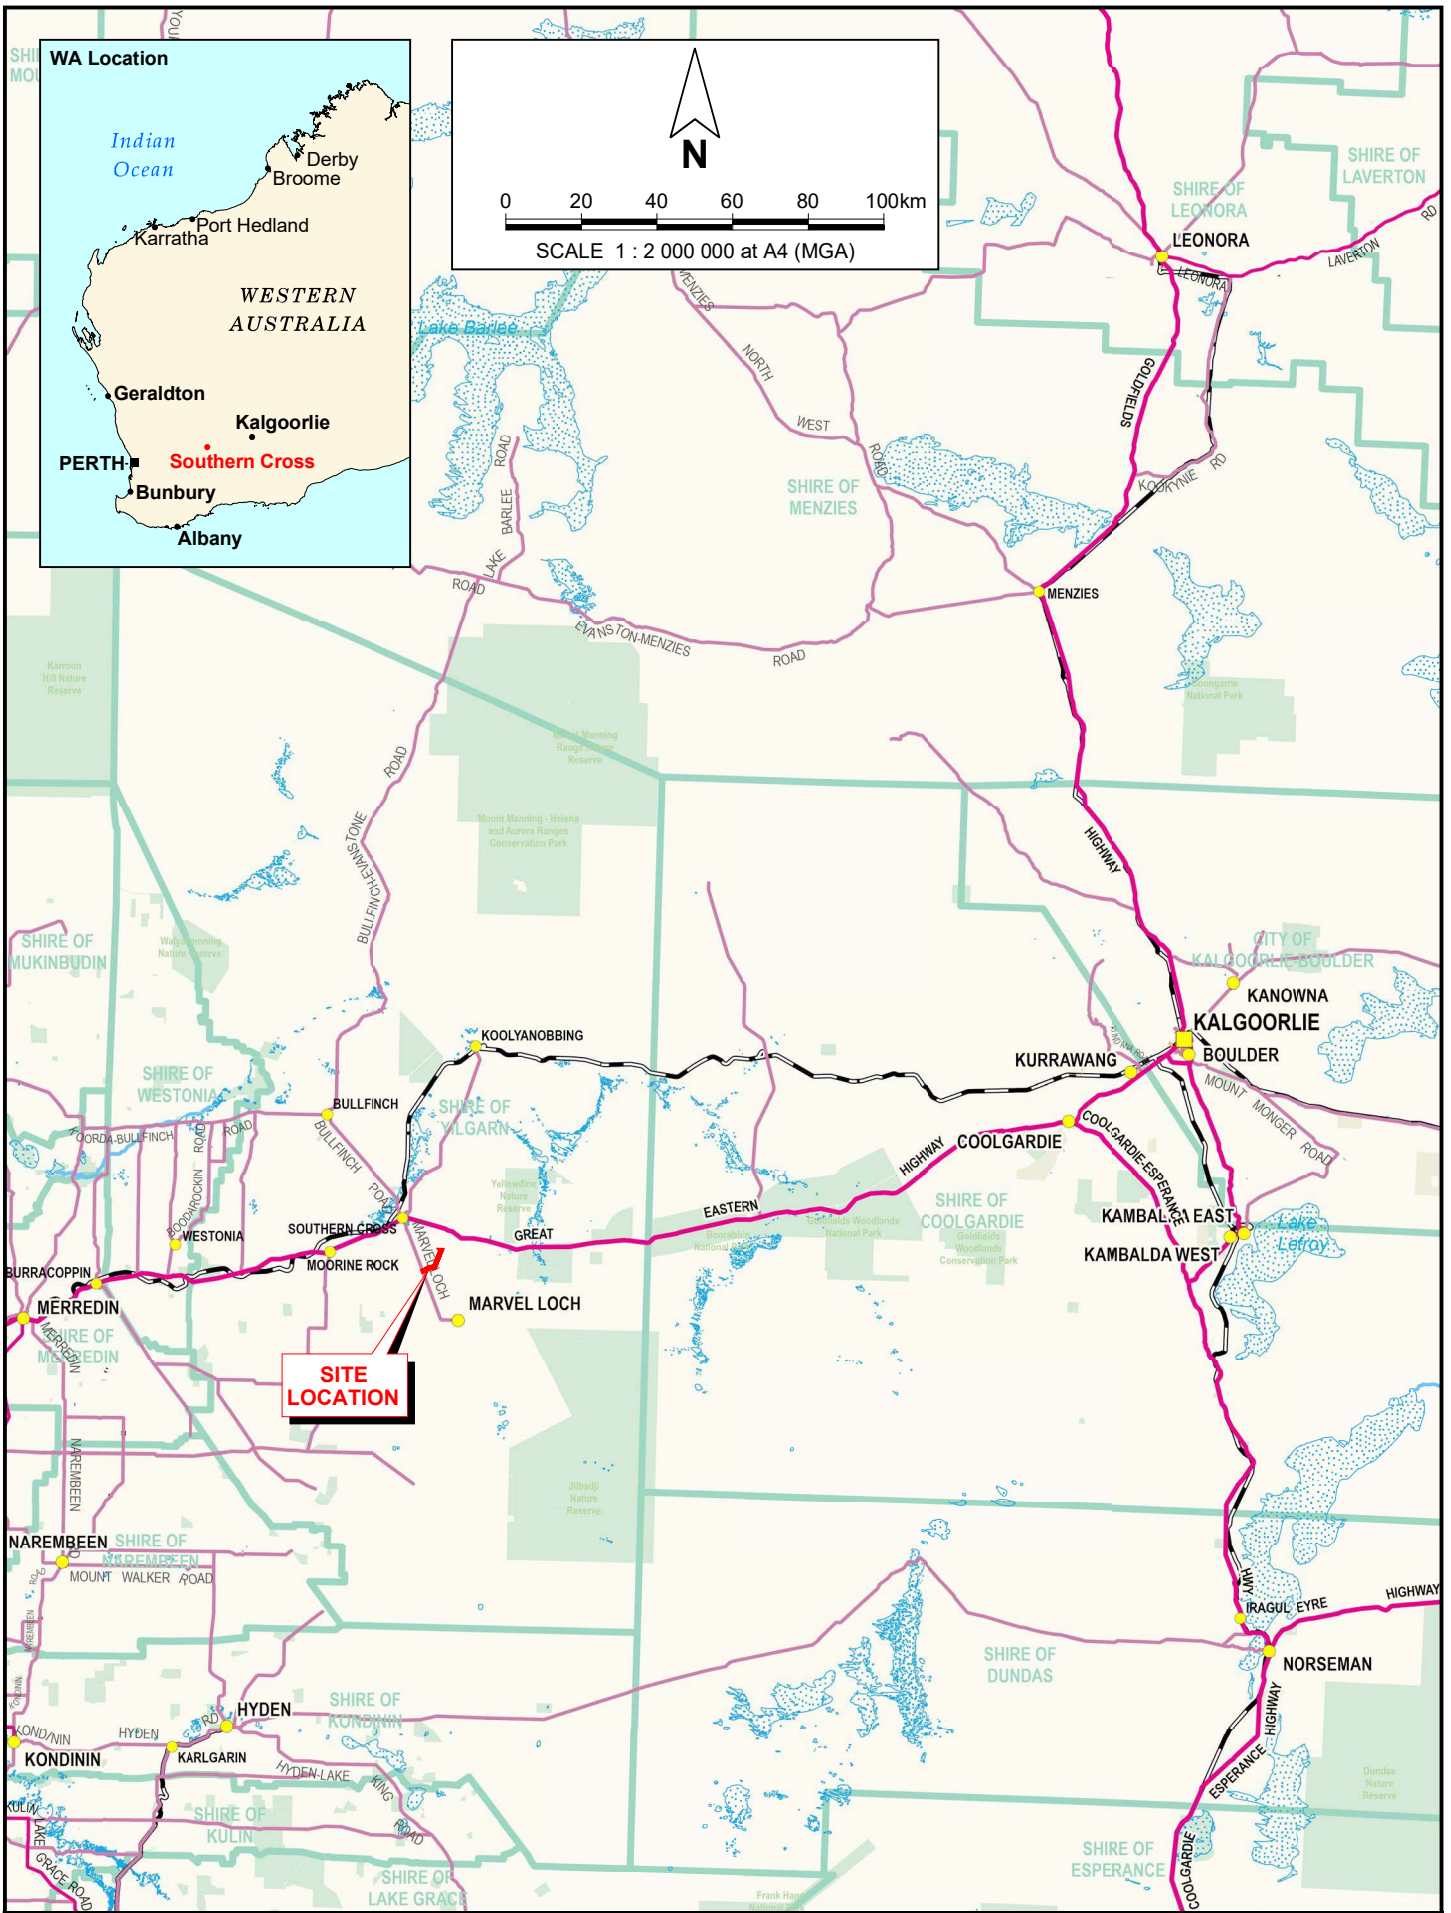

- A total of 70 plant species were recorded on the site including 63 native and 7 introduced species (10%);
- No Threatened or Priority flora species were recorded on the site;
- Seven vegetation types were described and mapped on the site; six of which were Eucalypt woodlands dominated by *Eucalyptus salmonophloia*, *Eucalyptus loxophleba*, *Eucalyptus yilgarnensis* or *Eucalyptus spathulata* and one Shrubland dominated by *Acacia acuminata*;
- The condition of the native vegetation was assessed as Very Good for areas surrounded by farmland due to an impacted understorey and Excellent in areas surrounded by native vegetation;
- The site is within the Coolgardie C002 IBRA sub-region;
- The vegetation is part of Beard vegetation association Yilgarn 1068. There is approximately 31.5% of the pre-European extent of vegetation association Yilgarn 1068 remaining. The vegetation on the site is therefore not of regional significance;
- None of the vegetation types is a Threatened or Priority Ecological Community. The vegetation has similar characteristics to the Eucalypt woodlands of the Western Australian Wheatbelt TEC, however does not meet the Key Diagnostic Characteristic as it is outside the IBRA region and sub-region in which the TEC occurs; and
- The vegetation at the southern end of the Glendower Road and Ghooli South Road intersection was found to be mostly grassy weeds and a few native shrubs and grasses with no trees. The vegetation is Completely Degraded with no Threatened or Priority plant species.

Protected Matters Search Tool Report

Australian Government

Department of Climate Change, Energy,
the Environment and Water

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 19-Dec-2023

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	1
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	10
Listed Migratory Species:	6

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	9
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	4
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Threatened, Extinct and Specially Protected fauna or flora are species which have been adequately searched for and are deemed to be, in the wild, threatened, extinct or in need of special protection, and have been gazetted as such.

The lists of Threatened, Extinct and Specially Protected species are listed under Part 2 of the Biodiversity Conservation Act 2016.

Categories of Threatened, Extinct and Specially Protected fauna and flora are:

T Threatened species

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

Threatened fauna is the species of fauna that are listed as critically endangered, endangered or vulnerable threatened species.

Threatened flora is the species of flora that are listed as critically endangered, endangered or vulnerable threatened species.

The assessment of the conservation status of threatened species is in accordance with the BC Act listing criteria and the requirements of Ministerial Guideline (Number 1) and Ministerial Guideline (Number 2) that adopts the use of the International Union for Conservation of Nature (IUCN) Red List of Threatened Species Categories and Criteria 4, and is based on the national distribution of the species.

CR Critically endangered species

Threatened species considered to be *“facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines”*.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines.

EN Endangered species

Threatened species considered to be *“facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines”*.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines.

VU Vulnerable species

Threatened species considered to be *“facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines”*.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines.

Extinct Species

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Currently only fauna are listed as species of special conservation interest.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Currently only fauna are listed as species otherwise in need of special protection.

P Priority species

Priority is not a listing category under the BC Act.

All fauna and flora are protected in WA following the provisions in Part 10 of the BC Act. The protection applies even when a species is not listed as threatened or specially protected, and regardless of land tenure (State managed land (Crown land), private land, or Commonwealth land).

Species that may possibly be threatened species that do not meet the criteria for listing under the BC Act because of insufficient survey or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of prioritisation for survey and evaluation of conservation status so that consideration can be given to potential listing as threatened.

Species that are adequately known, meet criteria for near threatened, or are rare but not threatened, or that have been recently removed from the threatened species list or conservation dependent or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of priority status is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, for example, agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation.

Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under immediate threat from known threatening processes. These species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, for example, national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation.

Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under threat from known threatening processes. These species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations and the species does not appear to be under imminent threat or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat.

Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. These species need further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as a conservation dependent specially protected species.
- (c) Species that have been removed from the list of threatened species or lists of conservation dependent or other specially protected species, during the past five years for reasons other than taxonomy.
- (d) Other species in need of monitoring.

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally

destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of ≤ 100 ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤ 10 occurrences or a total area of ≤ 200 ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

QUADRAT SC 3

50 731324 E 6532905 N

Vegetation: *Eucalyptus spathulata* Low Woodland over *Acacia acuminata* Tall Shrubland
Condition: Good
Soil Type: Orange-brown sandy loam over granite
Landform: Flat
Date: 28.9.23
Recorder: Paul van der Moezel

Quadrat (10 x 40m)

SPECIES	HEIGHT (m)	COVER (%)
<i>Eucalyptus spathulata</i>	10	20
<i>Acacia acuminata</i>	4-5	20
<i>Austrostipa elegantissima</i>	06	2
<i>Dianella revoluta</i> var. <i>divaricata</i>	0.5	1
<i>Lepidosperma</i> sp.	0.5	<1
<i>Triodia pungens</i>	0.3	<1
<i>Lomandra collina</i>	0.3	<1
<i>Sclerolaena eriacantha</i>	0.1	<1

* introduced species

QUADRAT SC 4

50 731260 E 6532836 N

Vegetation: *Eucalyptus yilgarnensis* Low Woodland over *Melaleuca hamata* Tall Open Shrubland
Condition: Good
Soil Type: Orange sandy loam
Landform: Flat
Date: 28.9.23
Recorder: Paul van der Moezel

QUADRAT (20 x 20m)

SPECIES	HEIGHT (m)	COVER (%)
<i>Eucalyptus yilgarnensis</i>	8	20
<i>Melaleuca hamata</i>	3	1
