### 5.2 Size

- If you propose to clear a patch(es) of vegetation, enter a hectare value for the total size of the area (mark number of trees as zero). For example, “clearing of 5 hectares”.
- If you propose to clear only individual trees (i.e. the shrubs, grasses, groundcover plants will remain intact), provide the number of trees. For example, “clearing of 10 trees”. If any shrubs, grasses, and/or groundcover plants **may** be damaged in the clearing process, enter the total area only.
- If you propose to clear an area of native vegetation within a larger footprint, enter the hectare value for the total size of the area to be cleared (mark number of trees as zero) and the size of the footprint. For example, 5 hectares of clearing within a 10-hectare footprint. This option is only available for purpose permit applications.
- Enter values for **both** number of trees and the size of the area **only if** you are clearing individual trees in one area **and** a patch of vegetation in a different area.
- Please note the following area conversions/calculations:

1 hectare = 10,000 m<sup>2</sup>

1 acre = 0.4 hectares/4,000 m<sup>2</sup>

1 tree = 0.01 hectares/100 m<sup>2</sup>

Area of circle = 3.14 x radius<sup>2</sup>

Area of a rectangle = length x width

Area of a triangle = ½ length x perpendicular height

Total area of clearing proposed (hectares)	0.05 ha
Footprint of clearing (hectares) (purpose permit only)	0
Number of individual trees to be cleared	0

Note: Calculate the area of a tree based on the area encompassed by the tree’s drip line; that being the outermost circumference of the tree’s canopy.

### 5.3 Purpose

<p>Provide the reason for proposed clearing (e.g. road construction, grazing and pasture, hazard reduction, horticulture, timber harvesting etc.).</p> <p>If applicable, provide any additional project overview or explain in detail the activities on the property (e.g. provide context of work proposed and describe how clearing will contribute to overall work activities onsite etc.).</p>	<p><b>Reason:</b> Drain maintenance and establishing drain access for future maintenance</p> <p>A drain was installed to service the Halifax development between 1995 – 2000, which has not been regularly maintained. Silt (from bank erosion) and aquatic vegetation now impede the drain function. Water is unable to move past the northern outlet which is leading to flooding in the Halifax Drive area.</p> <p>The work to be carried out involves excavation of a 135 m section of the drain to remove aquatic vegetation and silt, and to re-establish an approximate 4 m drain width.</p> <p>Regrowth vegetation which has established along the southern bank of the drain will be required to be cleared to allow access for the excavator. The excavator requires a 5 m corridor from the southern boundary of the drain. The intent is for the 5 m corridor to remain clear, so that a permanent access way for machinery can be retained to allow drain maintenance in future years.</p> <p><b>Additional project context:</b> The 5 m corridor from the southern drain edge was marked out on-site by a City surveyor, and is shown as the 'Project Area' in the aerial map provided. Regrowth vegetation sparsely occurs over bare ground within the Project Area. The majority of regrowth is proposed to be cleared, with the areas and species outlined on the aerial map. Some of the regrowth will be retained, which is not included in the mapping but is outlined in Section 6.1.</p> <p>The sedges to be removed are primarily <i>Lepidosperma tetraquetrum</i>, with some <i>Juncus</i> sp. interspersed. The majority of regrowth within the dry portion of the Project Area is <i>Melaleuca lateritia</i>, with some <i>Agonis flexuosa</i> saplings, <i>Kunzea glabrescens</i> and <i>Calothamnus</i> sp.. There is also a stand of dead <i>Acacia saligna</i>. It is considered that the majority of the regrowth is less than 5 years old.</p> <p>Approximately 50% of the site is degraded regrowth vegetation, with no understorey present. The remaining 50% is completely degraded (cleared), comprising of sand and patches of dried sedges stockpiled from</p>

	previous maintenance. A range of weeds occur within the Project Area, including bridal creeper, Flinders Range wattle, grasses and broadleaf weeds.
Specify what the final land use will be after clearing	No change  Lot 216 will remain Light Industry (LPS8), and Industrial (GBRS). Lot 6092 will remain Regional Open Space (GBRS) with no proposed change to the Special Control Area (Flood Prone Area).

#### 5.4 Method

Proposed method of clearing (i.e. burning, cutting, draining, flooding, grazing, mechanical clearing/bulldozing or other – specify)	Mechanical clearing, levelling and excavation, using a 11 tonne or 20 tonne excavator.
---	--

#### 5.5 Timeframe

Period within which you propose to do the clearing (e.g. 1/7/2022 to 30/8/2024)	Start date: 03/03/2025 End date: 03/03/2027
---	--

Note: The clearing referral process is not suitable for any clearing that is expected to take longer than two years.

#### 5.6 Pre-application scoping

Historic clearing of native vegetation in the Swan Coastal Plain and Avon Wheatbelt [Interim Biogeographic Regionalisation for Australia](#) (IBRA) bioregions has been extensive.

DWER/DEMIRS strongly recommends a pre-application meeting if you propose to clear native vegetation within these bioregions.

Do you propose to clear native vegetation within the Swan Coastal Plain or Avon Wheatbelt bioregions?	<input type="checkbox"/> Yes – complete section below	
	<input type="checkbox"/> I have had a pre-application meeting with DWER/DEMIRS	
	Insert date of meeting and officer name(s):	
	<input type="checkbox"/> I have contacted DWER/DEMIRS in relation to a pre-application meeting and been advised that a meeting is unnecessary in this case.	
	Insert date of conversation and officer name(s):	

	<input checked="" type="checkbox"/> I have not had a pre-application meeting with DWER/DEMIRS. I understand that this may increase the likelihood of requests for further information and/or delays in assessment.  <input type="checkbox"/> No – proceed to next question.

## Part 6 – Mitigation hierarchy

### 6.1 Avoidance and mitigation

Explain how you have, or will, put avoidance and mitigation measures in place to eliminate, reduce, or otherwise mitigate the need for and scale of the proposed clearing of native vegetation.

Attach supporting documents to substantiate your explanation.

Your explanation should demonstrate you have planned the project so that the least clearing possible is to be undertaken. The following questions may help you frame your explanation:

- Why did you select this location and amount of clearing?
- What alternatives to clearing – e.g. engineering solutions – did you consider? (Attach design drawings where applicable)
- What changes, if any, did you make to the location or amount of clearing to reduce the impacts of the clearing?

Note: If you do not demonstrate adequate efforts to avoid and mitigate clearing, DWER/DEMIRS will ask you to do so during the validation of this application. Offsets will only be considered by DWER/DEMIRS as a last resort, once avoidance and minimisation measures have been clearly demonstrated.

Provide the avoidance details (e.g. retention of vegetation on property)	<p>All works are to be completed from the southern side of the drain, to avoid impacts to the heavily vegetated northern side. The southern side of the drain has many bare areas, and is already highly degraded.</p> <p>Several trees were identified and flagged on site as being able to be retained as the excavator can work around them. Every effort was made to retain peppermint trees in particular, with 4 individual peppermint trees identified for retention. The majority of peppermint trees to be retained are saplings (&lt;5 years old), but will be retained into maturity. One mature peppermint tree was retained, just outside of the Project Area (western extent). In addition, 4 Melaleuca saplings were flagged for retention.</p>
Provide the mitigation details (e.g. management of weed spread, rehabilitation)	<p>Existing weeds within the Project Area will be removed, and machinery will be clean on entry (to reduce the risk of introducing more weeds). Following the works, the area will managed for weeds on an ongoing basis.</p> <p>Clearing will be progressive and one-directional towards existing vegetation (east to west), to allow fauna to move away from the works as they occur.</p> <p>Sedges will be removed from site and the existing stockpiles of dried sedges will also be removed, to reduce the potential for fire (fuel load) and the potential for silt run-off to be captured in these areas and allow for weeds to reestablish.</p> <p>The intent of the work is to establish a permanent access way for machinery to</p>

	maintain the drain. Therefore, no rehabilitation is proposed within the project area.

Please provide the IBSA number(s) – or submission number(s) if the IBSA number has not yet been issued – in the space provided. Note that a submission number is not confirmation that a biodiversity survey has been accepted and is not the same as an IBSA number. IBSA numbers are only issued once a survey has been accepted. Once an IBSA number is issued, please notify DWER/DEMIRS. Please note DWER/DEMIRS will suspend the assessment timeframes for your application until you provide the IBSA number(s).

## Part 8 – Assessment bilateral agreement

The native vegetation clearing processes under Part V of the EP Act have been accredited by the Commonwealth of Australia under the EPBC Act and so can be assessed under an assessment bilateral agreement.

To be assessed this way, the proposed clearing action must have been referred to the Commonwealth under the EPBC Act and deemed a '**controlled action**' before you submit this form. DWER/DEMIRS will decline to deal with your application without the proposed clearing first being deemed a controlled action.

For further information, see DWER's [guidance on the assessment bilateral agreement](#).

## Part 9 – Other approvals

### 9.1 Environmental impact assessment (Part IV of the EP Act)

Clearing may be referred to the EPA if it is considered to be part of a 'significant proposal', as defined by section 37B(1) of the EP Act, or will likely to be part of a larger development. An example is when the clearing is for a road to a future mine.

Section 37B(1) of the EP Act defines a 'significant proposal' as "a proposal likely, if implemented, to have a significant effect on the environment". If a decision-making authority (e.g. DWER/DEMIRS) considers the proposal in this form is likely to constitute a 'significant proposal', under section 38(5) of the EP Act they must refer the proposal to the EPA under Part IV, if such a referral has not already been made.
