Executive Summary

Plantecology Consulting was commissioned by Coterra Environment to undertake a detailed flora and vegetation survey within the grounds of Carey Baptist College, Nicholson Road, Forrestdale in the City of Armadale. The site is approximately 10 ha in area and currently supports a school, surrounded by a mixture of native and non-native vegetation, as well as cleared areas.

A field survey of the site was undertaken by a botanist from Plantecology Consulting on the 17th and 18th October 2023. The site was traversed on foot and a detailed survey of the vegetation was undertaken at ten 100 m² sampling plots (10m x 10m quadrats), selected to adequately sample the flora within a stand. Plots were positioned to sample a representative and homogeneous area (i.e. not located in transitional areas between communities). The location of the NW corner of a plot was recorded with a hand-held GPS unit and a photograph of the plot taken looking inward to the quadrat. All vascular plant species were recorded and an estimate of the percentage cover was made for each species.

A total of 47 native and 48 non-native (exotic) taxa was recorded within the site, representing 36 families and 84 genera. The dominant families containing mostly native taxa were Proteaceae (5 native taxa), Myrtaceae (9 native taxa) and Fabaceae (8 native taxa, 6 exotic taxa). All but one of the taxa from the Poaceae family were exotics.

No Threatened Flora pursuant to either the Biodiversity Conservation Act (2016) (BC Act) or the Environment Protection and Biodiversity Conservation Act (1999) (EPBC Act) were recorded during the survey.

One species of Priority Flora was recorded. Eight individuals in total of *Jacksonia gracillima* (P3) were recorded at five locations, within the *Banksia attenuata* – *Kunzea glabrescens* Open Woodland and the *Eucalyptus todtiana* Open Woodland.

Six plant communities were identified within the survey area:

Melaleuca preissiana – *Kunzea glabrescens* Open Woodland

Open woodland of *Melaleuca preissiana* over tall thicket of *Kunzea glabrescens* over an exotic understorey of **Vulpia bromoides*, **Ehrharta longifolia* and **Hypochaeris glabra* on a closed depression of clayey sand.

This community type occurs in the north western section of the survey area.

Banksia attenuata – *Kunzea glabrescens* Open Woodland

Open Woodland of *Banksia attenuata* and *Banksia menziesii* over a tall thicket of *Kunzea glabrescens* and *Xanthorrhoea brunonis* over a herbland of **Hypochaeris glabra*, **Vulpia bromoides* and **Briza maxima* on a flat of clayey sand.

This community is adjacent to the *Melaleuca preissiana* – *Kunzea glabrescens* Open Woodland and the *Eucalyptus todtiana* – *Banksia attenuata* – *Banksia ilicifolia* Open Woodland described below.

Eucalyptus todtiana – *Banksia attenuata* – *Banksia ilicifolia* Open Woodland

Open woodland of *Eucalyptus todtiana* with *Banksia attenuata* or *Banksia ilicifolia* over tall shrubland of *Kunzea glabrescens*, *Xanthorrhoea brunonis* and *Acacia saligna* over tussock grassland of **Ehrharta longiflora*, **Ehrharta calycina* and **Hypochaeris glabra* on flats of clayey sand.

This woodland occupies the central part of the site adjacent to the northern boundary.

Melaleuca raphiophylla Open Forest

Open Forest of *Melaleuca raphiophylla* over a mainly exotic herbland of **Zantedeschia aethiopica*, **Lolium rigidum* and **Cotula coronopifolia* on an open depression of clayey sand.

This community occurs along the drainage system in the central part of the survey area.

Melaleuca preissiana – *Astartea scoparia* Open Forest

Open Forest of *Melaleuca preissiana* over shrubland of *Astartea scoparia* over tussock grassland of **Ehrharta longiflora*, *Dielsia stenostachya* and **Vulpia bromoides* on an open depression of clayey sand.

Banksia attenuata – *Banksia menziesii* Open Woodland

Open woodland of *Banksia attenuata* and *Banksia menziesii* with *Eucalyptus todtiana* over open shrubland of *Adenanthos cygnorum* subsp. *cygnorum* over tussock grassland of **Ehrharta calycina*, *Conostylis aculeata* and **Hypochaeris glabra* on loamy to clayey sands on low rises.

**Eragrostis curvula* Tussock Grassland

Tussock grassland of **Eragrostis curvula* with **Vulpia bromoides*, **Lotus subbiflorus*, **Carpobrotus edulis* and **Lolium rigidum* with scattered emergent *Melaleuca lateritia* on flats of clayey sands to light clays.

This community is dominated by exotic taxa and covers the majority of the site.

No Threatened Flora pursuant to either the BC Act (2016) or the EPBC Act (1999) were recorded during the survey.

One species of Priority Flora was recorded. Eight individuals in total of *Jacksonia gracillima* (P3) were recorded at five locations, within the *Banksia attenuata* – *Kunzea glabrescens* Open Woodland and the *Eucalyptus todtiana* Open Woodland.

The vegetation condition of the of the majority of the site is rated as 'Completely Degraded', with only the *Eucalyptus todtiana* – *Banksia attenuata* woodland that may be considered 'Degraded', and the *Banksia attenuata* – *Banksia menziesii* Open Woodland rated as being in 'Good' condition. The native component in the *Eragrostis curvula* tussock grassland is almost wholly absent and this community, which is the majority of the survey area, is rated as 'Completely Degraded'.

The *Banksia attenuata* – *Banksia menziesii* open woodland was determined to be part of FCT 21c 'Low-lying *Banksia attenuata* woodlands or shrublands', a Priority 3 Ecological community. FCT 21c is often found fringing seasonally-wet habitats on the Bassendean Dune System between Gingin and Bunbury.

1 Introduction

Plantecology Consulting was commissioned by Coterra Environment to undertake a detailed flora and vegetation survey within the grounds of Carey Baptist College in Nicholson Road, Forrestdale in the City of Armadale (Figure 1). The site is approximately 10 ha in area and currently supports a mixture of native vegetation and degraded wasteland.

1.1 Existing Environment

The site is located approximately 23 km SSE of the Perth CBD, and lies within the Bassendean Dune System of the Swan Coastal Plain. The site itself is only partially vegetated with native vegetation remnants, and has likely been open to grazing in the past. The site is dissected by the access track for the Dampier-Bunbury Natural Gas Pipeline (DBNGP). A drainage line separates the sandy flats in the western portion of the site from very low sandy rises in the eastern part of the site. The latter supports an open banksia woodland.

1.2 Previous Surveys

Prior to construction of Carey Baptist College, a flora and vegetation survey was undertaken over the entirety of Lot 2 Nicholson Rd, Forrestdale by Bennett Environmental Consulting Pty Ltd (BEC) (2011). The survey identified eight vegetation types including two *Banksia attenuata* woodlands and a *Eucalyptus todtiana* woodland in the uplands, as well as four wetland types dominated by either *Melaleuca preissiana* or *Melaleuca raphiophylla* and a disturbed *Eragrostis curvula* grassland. The vegetation condition ranged from 'Very Good to Good' in the banksia woodlands to 'Completely Degraded' and 'Degraded' in the lower lying areas.

BEC (2011) recorded a total of 148 taxa, 66 of which were weeds. Two of the taxa recorded were of conservation significance. Five *Jacksonia gracillima* individuals (P3) were recorded from one quadrat within a *Eucalyptus todtiana* – *Melaleuca preissiana* Woodland, with one other occurrence of about 10 plants. *Schoenus pennisetis* (P3) was recorded in the *Melaleuca preissiana* low woodland over dense thicket of *Kunzea glabrescens* in the north western section of the site.

1.3 Climate

The Forrestdale area experiences a dry Mediterranean climate of hot dry summers and cool wet winters. Long-term climatic averages indicate the site is located in an area of moderate to high rainfall, receiving 810 mm on average annually (data for Jandakot Aero, station number 9172, the nearest currently reporting station; Bureau of Meteorology 2023) with the majority of rainfall received between May and August. The area experiences rainfall on an average of 83 days per year. Mean maximum temperatures range from 18.1°C in July to 31.6 °C in February. Mean minimum temperatures range from 7.1 °C in July, to 17.2 °C in February (Bureau of Meteorology 2023).

1.4 Soils

The Atlas of Australian Soils maps the soils for the site as Map Unit Cb38, which is described as sandy dunes with intervening sandy and clayey swamp flats. The main soils are leached sands, sometimes over clay at depth (Natural Resource Information Centre 1991). On a finer scale, the western half of the survey area lies within the Bassendean B4 phase, which comprises broad, poorly drained sandplains with deep grey siliceous or bleached sands, and generally underlain by clay at depths greater than 1.5m (DPIRD 2022-). The eastern half of the site lies within the Bassendean B1 phase, which is comprised of very low relief dunes, undulating sandplain and discrete sand rises with deep bleached grey sands (DPIRD 2022-).

Either description is consistent with that observed within the survey area.

1.5 Conservation Significant Flora

Under the Biodiversity Conservation Act 2016 ('BC Act'), the Minister for the Environment produces a gazetted list of Threatened Flora under three categories: Critically Endangered, Endangered and Vulnerable. The Department of Biodiversity, Conservation and Attractions (DBCA) also produces a list of Priority Flora that have not been assigned statutory protection under the BC Act but may be under some degree of threat (DBCA 2023a). The DBCA recognises four Priority Flora levels. The definitions for each category of Threatened and Priority Flora are shown in Appendix E.

As well as protection under State legislation, selected flora are also afforded statutory protection at a Federal level pursuant to the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). The EPBC Act provides for the protection of Threatened species, pursuant to Schedule 1 of the Act, and are defined as "Critically Endangered", "Endangered", "Vulnerable" or "Conservation Dependent" under Section 179. Definitions of these categories are shown in Appendix E. Any action likely to have a significant impact on a species listed under the EPBC Act requires approval from the Commonwealth Minister for the Environment.

Searches of the State databases (Reference Number: 53-1023) were undertaken to identify conservation significant taxa with the potential to occur within the site and an assessment of the likelihood of each taxon was made based on the criteria listed in Table 1. Fifty taxa of conservation significance were identified from the database searches (Table 2) and those records within approximately 10 km of the site are shown in Figure 2. Of the identified taxa, 14 are listed as Threatened under the BC Act, of which seven are orchids. *Caladenia huegelii* (Grand Spider Orchid) occurs in low-lying grey or brown sands and clayey loams. It flowers between September and October. *Diuris drummondii* (Drummond's Donkey Orchid) occurs in wet habitats and flowers between November and January. *Diuris purdiei* (Purdie's Donkey Orchid) is found in swamps and damp shrublands, flowering between September and October). *Drakaea elastica* (Glossy-leafed Hammer Orchid) occurs in damp *Kunzea glabrescens* or banksia woodland. It flowers between September and October. *Drakaea micrantha* (Dwarf Hammer Orchid) occurs in white-grey sand and flowers from September to October. *Thelymitra magnifica* (Crystal Brook Star Orchid) occurs in dense shrubland on clay soils near granite rocks and flowers between September and October. *Thelymitra variegata* (Queen of Sheba) occurs in banksia woodlands on sandy coastal plains and flowers between August and October.

Table 1: Criteria used to assess the likelihood of occurrence of significant taxa and communities.

Criterion	Definition
Recorded	The taxon has been recorded within the survey area previously or during the current survey.
Likely	The taxon is likely to occur within the survey area as suitable habitat is known to be present and there are existing records very close to the survey area (within c.a. 10km)
Possible	The taxon may occur within the survey area as there are existing records in the vicinity of the survey area, and suitable habitat is likely to be present; OR The taxon may occur within the survey area as there is insufficient information available to exclude the possibility of occurrence.
Unlikely	The taxon is unlikely to occur within the survey area as suitable habitat is not present or is not likely to be present; OR Suitable habitat is present within the survey area, but the taxon/community has not been recorded despite reasonable survey effort.

Table 2: Threatened and Priority Flora potentially occurring within the survey area based on database searches. (VU = Vulnerable; EN = Endangered; CR = Critically Endangered; T = Threatened; 1 - 4 = Priority Flora Category)

Taxon	DBCRA Ranking	EPBC Act Category	Flowering Period	Habitat	Likelihood of Occurrence
<i>Acacia benthamii</i>	2		Aug-Sep	Limestone breakaways	Unlikely; habitat not observed within site
<i>Acacia horridula</i>	3		May-Aug	Gravelly soils over granite	Unlikely; habitat not observed within site
<i>Acacia oncinophylla subsp. patulifolia</i>	4		Aug-Dec	Granitic soils	Unlikely; habitat not observed within site
<i>Amanita preissii</i>	3		-	Sandy, lateritic soils	Possible
<i>Aponogeton hexatepalus</i>	4		Aug-Sep	Freshwater	Unlikely; habitat not observed within site
<i>Austrostipa jacobiana</i>	T	CR	Oct-Nov	Grey, white sandy soil	Possible
<i>Banksia kippistiana var. paenepeccata</i>	3		Oct-Nov	Lateritic gravelly soils	Unlikely; habitat not observed within site
<i>Byblis gigantea</i>	3		Sep-Dec	Sandy peat swamps	Unlikely; habitat not observed within site
<i>Caladenia huegelii</i>	T	EN	Aug-Oct	Grey, brown sand or clay loam	Possible
<i>Calectasia grandiflora</i>	2		Jun-Nov	Swampy areas, outcrops, flats, slopes	Possible
<i>Calytrix simplex subsp. simplex</i>	1		Oct-Nov		
<i>Cyathochaeta teretifolia</i>	3		-	Swamps, creek edges	Unlikely; habitat not observed within site
<i>Diuris drummondii</i>	T	VU	Nov-Jan	Swamps; standing water	Unlikely; habitat not observed within site
<i>Diuris purdiei</i>	T	EN	Sep-Oct	Winter-wet swamps	Possible
<i>Dodonia hackettiana</i>	4		Jul-Oct	Limestone	Possible
<i>Drakaea elastica</i>	T	EN	Oct-Nov	Low-lying near winter-wet swamps	Possible
<i>Drakaea micrantha</i>	T	VU	Sep-Oct	White, grey sand	Possible
<i>Drosera occidentalis</i>	4		Oct-Dec		Possible

Taxon	DBCA Ranking	EPBC Act Category	Flowering Period	Habitat	Likelihood of Occurrence
<i>Drosera oreopodion</i>	T		Sep-Oct	Clayey-sand, laterite	Unlikely; habitat not observed within site
<i>Drosera patens</i>	1		Dec, Feb	Swamp margins	Possible
<i>Eucalyptus x balanites</i>	T	EN	Oct-Feb	Sand over laterite	Unlikely; habitat not observed within site
<i>Haloragis aculeolata</i>	2		Dec	Winter-wet, clay over limestone	Unlikely; habitat not observed within site
<i>Jacksonia gracillima</i>	3		Oct-Nov	Sands	Recorded
<i>Jacksonia sericea</i>	4		Dec-Feb	Calcareous and sandy soils	Possible
<i>Johnsonia pubescens subsp. cygnorum</i>	2		Sep	Seasonally wet	Possible
<i>Kennedia beckxiana</i>	4		Sep-Dec	Granite outcrops	Unlikely; habitat not observed within site
<i>Lasiopetalum glutinosum subsp. glutinosum</i>	3		Sep-Dec	Banksia woodland	Possible
<i>Lepidosperma rostratum</i>	T	EN		Peaty sand, clay	Unlikely; habitat not observed within site
<i>Levenhookia preissii</i>	1		Sep-Dec	Swamps	Unlikely; habitat not observed within site
<i>Meionectes tenuifolia</i>	3		Nov-Dec	-	-
<i>Microtis quadrata</i>	4		Dec-Jan	Seasonally wet	Possible
<i>Morelotia australiensis</i>	T		Dec	Grey sand over clay, winter-wet depressions	Unlikely; habitat not observed within site
<i>Ornduffia submersa</i>	4		Sep-Oct	Wetlands	Unlikely; habitat not observed within site
<i>Phlebocarya pilosissima subsp. pilosissima</i>	3		Aug-Oct	White, grey sand, lateritic gravel	Unlikely; habitat not observed within site
<i>Poranthera moorokatta</i>	2		Sep-Nov	Banksia woodland	Possible
<i>Ptilotus sericostachyus subsp. roseus</i>	T		Sep-Oct	-	Unlikely
<i>Schoenus benthamii</i>	3		Oct-Nov	Winter-wet flats, swamps	Possible
<i>Schoenus capillifolius</i>	3		Sep-Nov	Brown mud	Unlikely; habitat not observed within site
<i>Schoenus pennisetis</i>	3		Aug-Sep	Peaty sand. Winter-wet	Recorded
<i>Stenanthemum sublineare</i>	2		Oct-Dec	Litterd white sand	Possible

Taxon	DBCRA Ranking	EPBC Act Category	Flowering Period	Habitat	Likelihood of Occurrence
<i>Stylidium aceratum</i>	3		Oct-Nov	Sandy soils, swamp	Possible
<i>Stylidium longitubum</i>	4		Nov	Sandy clay. Wetlands	Possible
<i>Stylidium paludicola</i>	3		Oct-Dec	Peaty sand. Winter-wet.	Possible
<i>Styphelia filifolia</i>	3		Mar-May	Sandy soils. Banksia woodland	Possible
<i>Synaphea sp. Serpentine (G.R. Brand 103)</i>	T	CR	Aug-Nov	Sandy loams. Seasonally wet.	Possible
<i>Thelymitra magnifica</i>	T			Stony ridges	Unlikely; habitat not observed within site
<i>Thelymitra variegata</i>	T		Aug-Oct	Sandy clay. Laterite	Possible
<i>Thysanotus glaucus</i>	4		Nov-Feb	White, grey sand	Possible
<i>Tripterococcus sp. Brachylobus (A.S. George 14234)</i>	4		Feb		
<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i>	4		Nov-Jan	Sandy clay. Winter-wet	Possible

1.6 Conservation Significant Communities

The DBCA defines an ecological community as “a naturally occurring assemblage that occurs in a particular type of habitat” (DBCA 2023b). A Threatened Ecological Community (TEC) is one that has declined in area or was originally limited in distribution. Uncommon ecological communities that do not strictly meet TEC defined criteria, or are inadequately defined, are listed by the DBCA as a Priority Ecological Community (PEC). Definitions of the categories of Threatened and Priority Ecological Communities are given in Appendix E.

As well as protection under State legislation, select ecological communities are also afforded statutory protection at a federal level pursuant to the EPBC Act. The EPBC Act provides for the protection of TECs, which are listed under section 181 of the Act, and are defined as “Critically Endangered”, “Endangered” or “Vulnerable” under Section 182. Similar to flora listed under the EPBC Act, any action likely to have a significant impact on a TEC listed under the EPBC Act requires Commonwealth approval.

Eight terrestrial TECs endorsed under State legislation are recorded as occurring within 25 km of the site:

- SCP10a – ‘Shrublands on dry clay flats’, listed as Endangered under State legislation and as Critically Endangered pursuant to the EPBC Act;
- SCP 20b – ‘*Banksia attenuata* and/or *Eucalyptus marginata* woodlands of the eastern side of the Swan Coastal Plain’, listed as Critically Endangered under State legislation and as Endangered pursuant to the EPBC Act;
- ‘Communities of Tumulus Springs (Organic Mound Springs, Swan Coastal Plain)’, listed as Critically Endangered under State legislation and as Endangered pursuant to the EPBC Act;
- SCP 3a – ‘*Corymbia calophylla* – *Kingia australis* woodlands on heavy soils’, listed as Critically Endangered under State legislation and as Endangered pursuant to the EPBC Act;
- SCP 3b – ‘*Corymbia calophylla* — *Eucalyptus marginata* woodlands on sandy clay soils of the southern SCP’, listed as Endangered under State legislation;
- SCP 3c – ‘*Corymbia calophylla* – *Xanthorrhoea preissii* woodlands and shrublands, Swan Coastal Plain’, listed as Endangered under both State legislation and pursuant to the EPBC Act;
- SCP 8 – ‘Herb rich shrublands in clay pans’, listed as Endangered under State legislation and Critically Endangered pursuant to the EPBC Act (as part of ‘Claypans of the Swan Coastal Plain’); and
- ‘Shrublands and Woodlands on Muchea Limestone of the Swan Coastal Plain’, listed as Endangered under State legislation and as Critically Endangered pursuant to the EPBC Act.

Seven other terrestrial FCTs listed as PECs are recorded as occurring within 25 km of the site:

- *Casuarina obesa* association (Priority 1);
- Claypans with mid dense shrublands of *Melaleuca lateritia* over herbs (Priority 1);
- SCP 22 ‘*Banksia ilicifolia* woodlands’ (Priority 3);
- SCP 24 – Northern Spearwood shrublands and woodlands’ (Priority 3);
- SCP 21c ‘Low lying *Banksia attenuata* woodlands or shrublands’ (Priority 3);
- ‘Tuart (*Eucalyptus gomphocephala*) woodlands and forests of the Swan Coastal Plain’ (Priority 3); and
- ‘*Banksia* dominated woodlands of the Swan Coastal Plain IBRA Region’ (Priority 3).

The ‘Banksia-dominated woodlands of the Swan Coastal Plain IBRA Region’, ‘*Banksia ilicifolia* woodlands’ and ‘Low-lying *Banksia attenuata* woodlands or shrublands’ are listed as ‘Endangered’ by the Commonwealth under the EPBC Act, while both the ‘Tuart woodlands’ and the ‘Claypans with mid dense shrublands’ are listed as Critically Endangered by the Commonwealth.

All of the site lies within the buffer zone of occurrences of the ‘Banksia-dominated woodlands of the Swan Coastal Plain IBRA Region’ (Figure 3).

1.7 Vegetation Complexes

Vegetation complexes are a series of plant communities forming a regularly repeating pattern associated with a particular soil unit (Government of Western Australia 2000). There are two vegetation complexes mapped as occurring within the site (Figure 4). Bassendean Complex – Central and South is mapped as occurring over in the western part of the site and is described as ranging from *Eucalyptus marginata* – *Allocasuarina fraseriana* – *Banksia* spp. woodlands to *Melaleuca* woodlands over sedges in the moister sites (Government of Western Australia 2017). This complex has approximately 25.7% of its original 87 500 ha pre-European extent remaining, and 1.86% of its original extent occurs on lands with some level of protection (Government of Western Australia 2017).

The Southern River Complex consists of *Corymbia calophylla* – *Eucalyptus marginata* – *Banksia* spp. woodlands with *Eucalyptus rudis* and *Melaleuca raphiophylla* along creek beds. This complex is mapped as occurring over the eastern portion of the site and has approximately 18.4% of its original 58 800 ha extent remaining, 1.18% of which is afforded some level of protection (Government of Western Australia 2017).

In the defined constrained area of the Perth Metropolitan Area, a vegetation complex with less than 10% of its original extent remaining is considered a ‘Critical Asset’ (DER 2014). Both vegetation complexes mapped over the site currently retain over 10% of their original extent.

1.8 Geomorphic Wetlands

Hill et al. (1996) has mapped all wetlands of the Swan Coastal Plain using the classification system of Semeniuk (1987). This classification system is based on the geomorphic setting and hydrological processes associated with a wetland. The classification allocates individual wetlands with shared characteristics to wetland suites. According to the geomorphic classification system of Semeniuk (1987), the wetland within the site is classified as a palusplain, which is an ephemeral or seasonally waterlogged wetland on flats. Table 3 below indicates the wetland types and their geomorphic setting.

Table 3: Geomorphic Wetland Classification, adapted from Semeniuk (1987)

	Basin	Flat	Channel	Slope
Permanently inundated	Lake	River		
Seasonally inundated	Sumpland	Floodplain	Creek	
Seasonally waterlogged	Dampland	Palusplain		Paluslope

The Hill et al. (1996) wetland mapping was digitised by the Department of Biodiversity, Conservation and Attractions (DBCA) to create the Geomorphic Wetland Swan Coastal Plain dataset (the dataset), which is managed and maintained by the DBCA. Each classified wetland listed in the dataset has a Unique Feature Identifier (UFI), however in the case of many large wetlands that have sustained a degree of disturbance, a separate management category may be assigned to parts of the wetland in order to reflect the current values. The description and management objectives of each management category are listed in Table 4. The wetland management category is important as it categorises wetlands on their significance, based on hydrological, biological and human use features. This

dynamic dataset is continually updated with site-specific wetland surveys providing new and relevant information.

Table 4: Wetland Management Categories and Objectives (Western Australian Planning Commission 2005)

Management Category	Description of Wetland	Management Objectives
Conservation Category Wetland (CCW)	Wetlands that support high levels of attributes and functions.	To preserve wetland attributes and functions through reservation in national parks, crown reserves, state owned land and protection under environmental protection policies.
Resource Enhancement Wetland (REW)	Wetlands that have been partly modified but still support substantial functions and attributes.	To restore wetlands through maintenance and enhancement of wetland functions and attributes by protection in crown reserves, state or local government owned land and by environmental protection policies, or in private property by sustainable management.
Multiple Use Wetland (MUW)	Wetlands with few attributes, which still provide important wetland functions.	Use, development and management should be considered in the context of water, town and environmental planning through landcare.

The Geomorphic Wetlands of the Swan Coastal Plain (GWSCP) dataset indicates that there is one wetland wholly or partially within the site (Figure 5). The Dampland UFI 7088 is categorised as a Multiple Use Wetland (MUW), which is a wetland with few natural attributes but may still provide important functions.

1.9 Purpose

The purpose of the survey was to assess the botanical values within the site by:

- Undertaking a detailed flora and vegetation survey in accordance with the Environmental Protection Authority’s (EPA) Technical Guidance: Flora and Vegetation Survey for Environmental Impact Assessment (2016).
- Identifying the presence of any Threatened Ecological Communities (TECs) and Priority Ecological Communities (PECs);
- Undertaking a systematic search for all vascular plant taxa present; and
- Recording the locations and numbers present of any Threatened Flora and Priority Flora identified at the time of the field survey.

2 Methods

2.1 Field Survey

A field survey of the site was undertaken by a botanist from Plantecology Consulting on the 17th and 18th October 2023. The site was traversed on foot and a detailed survey of the vegetation was undertaken at ten 100 m² sampling plots (10m x 10m quadrats), selected to adequately sample the flora within a stand (Figure 5). Plots were positioned to sample a representative and homogeneous area (i.e. not located in transitional areas between communities). The location of the NW corner of a plot was recorded with a hand-held GPS unit and a photograph of the plot taken looking inward to the quadrat. All vascular plant species were recorded and an estimate of the percentage cover was made for each species.

Environmental data recorded included topographic position, aspect, slope, soil colour and texture class, rock outcropping, litter cover as well as the degree of disturbance and an estimate of the time since the last fire event. The condition of the vegetation of the site was assessed to assist in determining the conservation values of the site. The vegetation condition was rated according to Keighery (1994), a vegetation condition scale commonly used in the metropolitan and southwest regions. The categories are listed and defined in Table 5. Data on the vegetation structure was also recorded and included the height of the three main strata and the dominant species within each stratum. The vegetation structural description follows that of Thackway et al. (2006).

Table 5: Vegetation Condition Scale (Keighery 1994)

Vegetation Condition	Definition
Pristine (1)	Pristine or nearly so, no obvious signs of disturbance.
Excellent (2)	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

All plant specimens collected during the field survey were dried, pressed and then sorted in accordance with requirements of the Western Australian Herbarium. Identification of specimens occurred through comparison with named material and through the use of taxonomic keys. Taxonomic determinations were made using reference material at the Western Australian State Herbarium. Taxa names utilise the current terminologies from the Western Australian Herbarium (1998-). Family names utilise the revised phylogeny of the Angiosperm Phylogeny Group - APGIII Western Australian Herbarium (1998-).

2.2 Data Analysis

2.2.1 Hierarchical Clustering

To place the vegetation of the site in a regional context and determine its conservation significance, the Carey Baptist College data was analysed against the data from the Swan Coastal Plain survey (Gibson et al. 1994). All analyses were undertaken using R packages cluster (Maechler et al. 2022), labdsv (Roberts 2019), optpart (Roberts 2020), fossil (Vavrek 2011) and Vegan (Oksanen et al. 2020).

For the comparison of the site data and that of the Swan Coastal Plain, the floristic data from this survey was transformed to presence/absence and the two datasets were merged into one. The transformed dataset was added to the Swan Coastal Plain dataset and the combined dataset was then analysed calculating the Bray-Curtis distance coefficient (or resemblance measure) and the flexible beta linkage method (beta = -0.1). Assignment of the Carey Baptist College plots was to the nearest distinct group by inspection of the resulting dendrogram. To remove any effect of spatial correlation between the new plots, data was added to the matrix one plot a time and the analysis re-run.

2.3 Survey Limitations

Various factors can limit the effectiveness of a vegetation survey. Pursuant to EPA Technical Guidance: Flora and Vegetation Survey for Environmental Impact Assessment (EPA 2016), these factors have been identified and their potential impact on the effectiveness of the survey has been assessed (Table 6).

The survey was undertaken in October 2023 and would likely have intercepted the flowering period of most taxa of conservation concern with the potential to occur within the site, in particular the Threatened annual and geophytic taxa. The minimum and maximum temperatures from July through October were approximately 1-2°C above average for the region. Rainfall during the period was considerably below average, with August (59.6 mm compared to an average of 127.4 mm) and October (6.8 mm against 46.1 mm) particularly dry. It is expected that the range of climatic conditions in the months prior to the survey may have affected the local species' phenology, in particular the annual taxa.

Table 6: Potential limitations affecting the vegetation survey

Potential limitations	Constraint	Comment
Availability of contextual information	No	Sufficient regional and local information was available to place the survey site in its environmental context.
Competency and experience of the botanists	No	The survey was undertaken by botanists with a comprehensive knowledge of South West vegetation, with at least 20 years' experience in vegetation surveys in Western Australia.
Seasonality	Moderate	The rainfall in the period prior was below average, particularly August and October. Maximum and minimum temperatures were above and below average, respectively, in the 3 months prior to the survey.
Adequate coverage and intensity of survey	No	The survey area was traversed on foot. It is considered the survey quadrats and mapping points provided adequate coverage of the site.
Proportion of Flora identified	No	It is estimated that 76% of taxa present within the site at the time of the survey were recorded (Chao2 estimator).
Disturbance	No	The vegetation was mostly intact, with past disturbance apparent from the presence of weeds.
Resources	No	Adequate resources were available to conduct the survey.
Access restrictions	No	All parts of the site were accessible.

3 Results

3.1 Flora

3.1.1 Floristic Summary

A total of 47 native and 48 non-native (exotic) taxa was recorded within the site, representing 36 families and 84 genera. The dominant families containing mostly native taxa were Proteaceae (5 native taxa), Myrtaceae (9 native taxa) and Fabaceae (8 native taxa, 6 exotic taxa). All but one of the taxa from the Poaceae family were exotics. For a complete species list and the individual site data refer to Appendix A and Appendix B, respectively.

3.1.2 Conservation Significant Flora

No Threatened Flora pursuant to either the Biodiversity Conservation Act (2016) or the EPBC Act (1999) were recorded during the survey.

One species of Priority Flora was recorded. Eight individuals in total of *Jacksonia gracillima* (P3) were recorded at five locations, within the *Banksia attenuata* – *Kunzea glabrescens* Open Woodland and the *Eucalyptus todtiana* Open Woodland (Table 7; Figure 6). Four plants were recorded within Plot 2 and one within Plot 3, with one individual each recorded at three other locations.

Table 7: Location of Priority flora within the survey area at Carey Baptist College, Forrestdale

Taxon	DBCA Ranking	Population Count	Latitude	Longitude
<i>Jacksonia gracillima</i>	P3	1	-32.16004983	115.9153297
<i>Jacksonia gracillima</i>	P3	1	-32.16021082	115.9155088
<i>Jacksonia gracillima</i>	P3	1	-32.1597537	115.9150520
<i>Jacksonia gracillima</i>	P3	4	-32.160224	115.914962
<i>Jacksonia gracillima</i>	P3	1	-32.159803	115.91517

3.2 Vegetation

3.2.1 Plant Associations

Six plant communities were identified within the survey area (Figure 6):

Melaleuca preissiana – *Kunzea glabrescens* Open Woodland (Plate 1)

Open woodland of *Melaleuca preissiana* over tall thicket of *Kunzea glabrescens* over an exotic understorey of **Vulpia bromoides*, **Ehrharta longifolia* and **Hypochaeris glabra* on a closed depression of clayey sand.

This community type occurs in the north western section of the survey area and is part of the *Melaleuca preissiana* Woodland described by BEC (2011).

Banksia attenuata – *Kunzea glabrescens* Open Woodland (Plate 2)

Open Woodland of *Banksia attenuata* and *Banksia menziesii* over a tall thicket of *Kunzea glabrescens* and *Xanthorrhoea brunonis* over a herbland of **Hypochaeris glabra*, **Vulpia bromoides* and **Briza maxima* on a flat of clayey sand.

This community is adjacent to the *Melaleuca preissiana* – *Kunzea glabrescens* Open Woodland and the *Eucalyptus todtiana* – *Banksia attenuata* – *Banksia ilicifolia* Open Woodland described below. It was previously mapped as part of the *Melaleuca preissiana* Woodland by BEC (2011) but has been separated due to the presence of *Banksia attenuata* and *Banksia menziesii* in the overstorey.

Eucalyptus todtiana – *Banksia attenuata* – *Banksia ilicifolia* Open Woodland (Plates 3 & 4)

Open woodland of *Eucalyptus todtiana* with *Banksia attenuata* or *Banksia ilicifolia* over tall shrubland of *Kunzea glabrescens*, *Xanthorrhoea brunonis* and *Acacia saligna* over tussock grassland of **Ehrharta longiflora*, **Ehrharta calycina* and **Hypochaeris glabra* on flats of clayey sand.

This woodland occupies the central part of the site adjacent to the northern boundary and is approximately equivalent to the *Banksia attenuata* and *Banksia ilicifolia* Low Forest described by BEC (2011).

Melaleuca raphiophylla Open Forest (Plate 5)

Open Forest of *Melaleuca raphiophylla* over a mainly exotic herbland of **Zantedeschia aethiopica*, **Lolium rigidum* and **Cotula coronopifolia* on an open depression of clayey sand.

This community occurs along the drainage system in the central part of the survey area and is equivalent to the *Melaleuca raphiophylla* Low forest described by BEC (2011).

Melaleuca preissiana – *Astartea scoparia* Open Forest (Plate 6)

Open Forest of *Melaleuca preissiana* over shrubland of *Astartea scoparia* over tussock grassland of **Ehrharta longiflora*, *Dielsia stenostachya* and **Vulpia bromoides* on an open depression of clayey sand.

This community was considered part of the *Melaleuca raphiophylla* Low Forest by BEC (2011) but has been separated due to the dominance of *Melaleuca preissiana* in this area.

Banksia attenuata – *Banksia menziesii* Open Woodland (Plates 7 & 8)

Open woodland of *Banksia attenuata* and *Banksia menziesii* with *Eucalyptus todtiana* over open shrubland of *Adenanthos cygnorum* subsp. *cygnorum* over tussock grassland of **Ehrharta calycina*, *Conostylis aculeata* and **Hypochaeris glabra* on loamy to clayey sands on low rises.

This community occupies the south eastern part of the survey area and is part of the *Banksia attenuata* – *Banksia menziesii* Low Woodland described by BEC (2011).

**Eragrostis curvula* Tussock Grassland (Plates 9 & 10)

Tussock grassland of **Eragrostis curvula* with **Vulpia bromoides*, **Lotus subbiflorus*, **Carpobrotus edulis* and **Lolium rigidum* with scattered emergent *Melaleuca lateritia* on flats of clayey sands to light clays.

This community is dominated by exotic taxa and covers the majority of the site.

3.2.2 Vegetation Condition

The vegetation condition of the of the majority of the site is in ‘Completely Degraded’ condition, with only the *Eucalyptus todtiana* – *Banksia attenuata* woodland considered ‘Degraded’, and the *Banksia attenuata* – *Banksia menziesii* Open Woodland in ‘Good’ condition. The native component in the *Eragrostis curvula* tussock grassland is almost wholly absent and this community, which is the majority of the survey area, is ‘Completely Degraded’.

The *Melaleuca preissiana* open woodland in the north western part of the site retains a native overstorey, with the shrub layer dominated by *Kunzea glabrescens* with low native shrub diversity. The ground layer consists mainly of weed taxa with only a sporadic occurrence of native taxa. Past disturbance has severely altered the structure and native diversity of these woodlands and they are in ‘Completely Degraded’ condition.

Similarly, the ground layer within the *Melaleuca raphiophylla* and *Melaleuca preissiana* open forests associated with the drainage line consists almost entirely of weed taxa such as **Zantedeschia aethiopica*, with only small patches of native taxa such as *Dielsia stenostachya*. The shrub layer is also diminished and consists of either *Kunzea glabrescens* or *Astartea scoparia*. The open forests are also 'Completely Degraded'.

While past disturbance has reduced the density of native taxa in the ground and shrub layers within the *Eucalyptus todtiana* -*Banksia attenuata* and *Banksia attenuata* - *Kunzea glabrescens* open woodlands, some native diversity has been retained and these communities are in 'Degraded' condition.

Only the *Banksia attenuata* - *Banksia menziesii* open woodland is in 'Good' condition. Some patches of this community have dense infestations of weeds such as **Ehrharta calycina* and the tree and shrub density is lower than would be expected in undisturbed vegetation, but enough native taxa remain in the ground layer for the stand to be considered 'Good' condition.

3.2.3 Conservation Significant Communities

No TECs are inferred to occur within the site. The results of the hierarchical clustering analysis showed that most plots were assigned either FCT 6 'Weed-dominated wetlands on heavy soils' or FCT 11 'Wet forests and woodlands'. These FCTs contain a high proportion of weeds and such results are often seen when the vegetation is in poor condition. The only assignments with some reliability were for Plots 8 and 9 in the *Banksia attenuata* - *Banksia menziesii* open woodland. Plot 8 was assigned to FCT 21c 'Low-lying *Banksia attenuata* woodlands or shrublands', while Plot 9 was assigned to FCT 22 '*Banksia ilicifolia* woodlands'. The assignment to FCT 21c is reasonable given the landscape position and composition of the overstorey, but the assignment to FCT 22 is unlikely and may be due to the higher weed presence in Plot 9. While *Adenanthos cygnorum*, *Banksia menziesii* and *Banksia attenuata* occur in both FCTs, *Banksia ilicifolia* is usually found in FCT 22 yet is absent from Plots 8 and 9. Therefore, assignment to FCT 21c is considered the more robust result.

FCT 21c is listed as a Priority 3 community under State policy, and also forms part of the 'Banksia-woodlands of the Swan Coastal Plain IBRA Region', which is listed as an 'Endangered' TEC pursuant to the EPBC Act. However, to meet the criteria for inclusion as part of the Banksia woodlands TEC, a vegetation stand must be in 'Good' or better condition according to the definitions in Table 2. Also, for a patch in 'Good' condition, the area of the patch must be at least 2 ha. The area of the *Banksia attenuata* - *Banksia menziesii* open woodland within the survey area is 1.79 ha, of which 1.50 ha is in 'Good' condition and 0.29 ha is 'Degraded'. Therefore, this vegetation type does not meet the criteria for inclusion as part of the 'Banksia-dominated woodlands of the Swan Coastal Plain IBRA Region' TEC.

3.3 Weeds

Forty-eight of the taxa recorded during the survey are exotics (weeds), which demonstrates the overall degraded condition of the vegetation within the site. The **Eragrostis curvula* tussock grassland consists mostly of exotic grasses and herbs, with only occasional emergent native shrubs.

Three taxa are Declared Pests under the *Biosecurity and Agriculture Management Act 2007*, with restrictions on their sale and movement. **Zantedeschia aethiopica* (Arum Lily) occurs in dense infestations within the *Melaleuca raphiophylla* and *Melaleuca preissiana* open forests, while **Asparagus asparagoides* (Bridal Creeper) also occurs in the *Melaleuca preissiana* open woodland. **Moraea flaccida* (Cape Tulip) was recorded from the **Eragrostis curvula* tussock grassland.

4 Discussion

The condition of the vegetation within the site is mostly poor and in 'Completely Degraded' condition, with around half of the taxa recorded being introduced (weeds). Three of the weeds are Declared Pests - **Zantedeschia aethiopica*, **Asparagus asparagoides* and **Moraea flaccida*.

Most of the site is covered by the **Eragrostis curvula* tussock grassland and reflects the previous agricultural land use of the property. In the wetter habitats that support a *Melaleuca* spp. overstorey, and the native ground layer has almost entirely been replaced by weeds such as **Zantedeschia aethiopica*, **Ehrharta longiflora* and **Vulpia bromoides*. In the slightly drier habitats that support a banksia overstorey, the native component of the ground layer is more evident but is still dominated by weeds. These areas are rated as 'Degraded', or 'Good' where a basic native diversity is still evident. The condition ratings are mainly lower than that reported by BEC (2011) and this may in part reflect variances between observers, but is also likely to be a reflection of a continued drying in the intervening years.

Eight plants of one species of Priority Flora were recorded at five locations within the site. *Jacksonia gracillima* (P3) is a prostrate shrub to approximately 1.5 m high that is often found in damp, sandy soils on the Swan Coastal Plain. The species was recorded in the previous survey of the Carey Baptist College site by BEC (2011) although not all previously recorded plants were within the current survey area.

Also recorded by BEC (2011) was *Schoenus pennisetis* (P3) in the *Melaleuca preissiana* – *Kunzea glabrescens* Open Woodland in the north western part of the site. This species was not observed in this survey. Precise coordinates were not given by BEC (2011) and so a location could not re-checked but, as stated by BEC (2011), the species is difficult to observe when its normally damp habitat dries out. The weeks prior to the survey were unusually dry and may have affected observability, and the general decline in rainfall in the south west region may mean the taxon is no longer present.

Much of the dryland habitat within the site would originally have supported stands of the Commonwealth-listed TEC 'Banksia-dominated woodlands of the Swan Coastal Plain IBRA Region'. To be considered a part this community, a vegetation patch must be in 'Good' or better condition and, for patches in 'Good' condition, must be 2 ha or more in size. The *Eucalyptus tottiana* – *Banksia attenuata* – *Banksia ilicifolia* open woodland is in 'Degraded' condition and therefore does not meet the criteria for inclusion. The *Banksia attenuata* – *Banksia menziesii* open woodland is mostly in 'Good' condition, but is below the 2 ha threshold. Therefore, this patch does not meet the size criterion for inclusion as part of the 'Banksia-dominated woodlands of the Swan Coastal Plain IBRA Region'.

The *Banksia attenuata* – *Banksia menziesii* open woodland was determined to be part of FCT 21c 'Low-lying *Banksia attenuata* woodlands or shrublands', a Priority 3 Ecological community. FCT 21c is often found fringing seasonally-wet habitats on the Bassendean Dune System between Gingin and Bunbury.

A dampland (UFI 7088) with a management category of Multiple Use (MUW) has been mapped over the south west corner of the site. The vegetation within this area is part of the **Eragrostis curvula* tussock grassland community and the condition is 'Completely Degraded'. The MUW category remains appropriate for this dampland.

5 Summary

The main ecological values of the vegetation within the site at Carey Baptist College, Forrestdale is the presence of the conservation significant species *Jacksonia gracillima* (P3) and the Priority 3 community FCT 21c 'Low-lying *Banksia attenuata* woodlands or shrublands. The vegetation of the site is mostly in a 'Degraded' to 'Completely Degraded' condition and has lost much of its botanical value from past land uses in those areas. Approximately half of the taxa recorded within the site were weeds, with three Declared Pests, **Zantedeschia aethiopica*, **Asparagus asparagoides* and **Moraea flaccida* present.

Appendix A

List of flora recorded within the survey area, including opportunistically observed taxa.

NB: * indicates introduced flora

Family	Taxon
Araceae	* <i>Zantedeschia aethiopica</i>
Orchidaceae	* <i>Disa bracteata</i> <i>Thelymitra mucida</i>
Iridaceae	* <i>Gladiolus caryophyllaceus</i> * <i>Moraea flaccida</i> <i>Patersonia occidentalis</i> * <i>Romulea rosea</i>
Xanthorrhoeaceae	<i>Xanthorrhoea brunonis</i>
Asparagaceae	* <i>Asparagus asparagoides</i> <i>Lomandra micrantha</i>
Haemodoraceae	<i>Conostylis aculeata</i> subsp. <i>aculeata</i>
Dasypogonaceae	<i>Dasypogon bromeliifolius</i>
Juncaceae	* <i>Juncus bufonius</i> <i>Juncus pallidus</i>
Cyperaceae	<i>Chaetospora curvifolia</i> <i>Eleocharis acuta</i> <i>Gahnia trifida</i> * <i>Ficinia marginata</i> <i>Lepidosperma longitudinale</i>
Anarthriaceae	<i>Lyginia barbata</i>
Centrolepidaceae	<i>Aphelia cyperoides</i>
Restionaceae	<i>Desmocladus flexuosus</i> <i>Dielsia stenostachya</i> <i>Hypolaena exsulca</i>
Poaceae	<i>Austrostipa flavescens</i> * <i>Avena barbata</i> * <i>Briza maxima</i> * <i>Briza minor</i> * <i>Bromus diandrus</i> * <i>Cynodon dactylon</i> * <i>Ehrharta calycina</i> * <i>Ehrharta longiflora</i> * <i>Eragrostis curvula</i> * <i>Holcus setiger</i> * <i>Hordeum leporinum</i> * <i>Lanatus ovatus</i> * <i>Lolium rigidum</i> * <i>Pennisetum clandestinum</i>

Family	Taxon
Poaceae	* <i>Phalaris aquatica</i> * <i>Poa annua</i> * <i>Vulpia bromoides</i>
Proteaceae	<i>Adenanthos cygnorum</i> subsp. <i>cygnorum</i> <i>Banksia attenuata</i> <i>Banksia ilicifolia</i> <i>Banksia menziesii</i> <i>Stirlingia latifolia</i>
Dilleniaceae	<i>Hibbertia subvaginata</i>
Crassulaceae	<i>Crassula colorata</i>
Fabaceae	<i>Acacia huegelii</i> * <i>Acacia longifolia</i> subsp. <i>longifolia</i> <i>Acacia pulchella</i> <i>Acacia saligna</i> <i>Aotus gracillima</i> <i>Euchilopsis linearis</i> <i>Gompholobium tomentosum</i> <i>Jacksonia furcellata</i> <i>Jacksonia gracillima</i> * <i>Lotus subbiflorus</i> * <i>Lupinus cosentinii</i> * <i>Medicago polymorpha</i> * <i>Ornithopus compressus</i> * <i>Trifolium campestre</i>
Moraceae	* <i>Ficus carica</i>
Casuarinaceae	<i>Allocasuarina fraseriana</i>
Geraniaceae	* <i>Erodium botrys</i> * <i>Pelargonium capitatum</i>
Lythraceae	* <i>Lythrum hyssopifolia</i>
Myrtaceae	<i>Astartea scoparia</i> <i>Calytrix</i> sp. <i>Eucalyptus marginata</i> <i>Eucalyptus todtiana</i> <i>Hypocalymma angustifolium</i> <i>Kunzea glabrescens</i> <i>Melaleuca preissiana</i> <i>Melaleuca raphiophylla</i> <i>Scholtzia involucrata</i>
Anacardiaceae	* <i>Schinus terebinthifolia</i>

Family	Taxon
Polygonaceae	* <i>Rumex crispus</i>
Aizoaceae	* <i>Carpobrotus edulis</i>
Primulaceae	* <i>Lysimachia arvensis</i>
Ericaceae	<i>Styphelia conostephioides</i>
Loganiaceae	<i>Phyllangium paradoxum</i>
Apocynaceae	* <i>Gomphocarpus fruticosus</i>
Boraginaceae	* <i>Echium plantagineum</i>
Solanaceae	* <i>Solanum nigrum</i>
Campanulaceae	* <i>Monopsis debilis</i> var. <i>depressa</i> * <i>Wahlenbergia capensis</i>
Stylidiaceae	<i>Stylidium repens</i>
Asteraceae	* <i>Arctotheca calendula</i> * <i>Cotula coronopifolia</i> * <i>Hypochaeris glabra</i> <i>Podotheca gnaphalioides</i> * <i>Sonchus oleraceus</i> * <i>Ursinia anthemoides</i>
Araliaceae	<i>Trachymene pilosa</i>

Appendix B

Site x species matrix of flora recorded within plots in the survey area.

Taxon	Plot 1	Plot 2	Plot 3	Plot 4	Plot 5	Plot 6	Plot 7	Plot 8	Plot 9	Plot 10
<i>Acacia huegelii</i>			0.2							
<i>Acacia pulchella</i>								0.3	0.2	
<i>Acacia saligna</i>				12						
<i>Adenanthos cygnorum</i> subsp. <i>cygnorum</i>								12	3	
<i>Arctotheca calendula</i>				0.1						
<i>Asparagus asparagoides</i>	0.3						0.2			
<i>Astartea scoparia</i>							35			
<i>Austrostipa flavescens</i>								0.1		
<i>Banksia attenuata</i>		10	30					20	8	
<i>Banksia ilicifolia</i>				5						
<i>Banksia menziesii</i>		4						10	5	
<i>Briza maxima</i>	0.2	1	1				0.2	1	0.1

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 29-Dec-2023

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar)	2
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	7
Listed Threatened Species:	42
Listed Migratory Species:	22

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	52
Commonwealth Heritage Places:	None
Listed Marine Species:	29
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	15
Regional Forest Agreements:	None
Nationally Important Wetlands:	4
EPBC Act Referrals:	106
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands) [\[Resource Information \]](#)

Ramsar Site Name	Proximity	Buffer Status
Forrestdale and thomsons lakes	Within Ramsar site	In feature area
Peel-yalgorup system	30 - 40km upstream from Ramsar site	In buffer area only

Listed Threatened Ecological Communities [\[Resource Information \]](#)

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area	In feature area
Clay Pans of the Swan Coastal Plain	Critically Endangered	Community likely to occur within area	In buffer area only
Corymbia calophylla - Kingia australis woodlands on heavy soils of the Swan Coastal Plain	Endangered	Community known to occur within area	In buffer area only
Corymbia calophylla - Xanthorrhoea preissii woodlands and shrublands of the Swan Coastal Plain	Endangered	Community known to occur within area	In buffer area only
Empodisma peatlands of southwestern Australia	Endangered	Community may occur within area	In buffer area only
Honeymyrtle shrubland on limestone ridges of the Swan Coastal Plain Bioregion	Critically Endangered	Community may occur within area	In buffer area only
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area	In feature area

Listed Threatened Species [\[Resource Information \]](#)

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			

Scientific Name	Threatened Category	Presence Text	Buffer Status
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area	In buffer area only
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area	In feature area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area	In feature area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Zanda baudinii listed as Calyptorhynchus baudinii Baudin's Cockatoo, Baudin's Black-Cockatoo, Long-billed Black-cockatoo [87736]	Endangered	Roosting known to occur within area	In feature area
Zanda latirostris listed as Calyptorhynchus latirostris Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding known to occur within area	In feature area

INSECT

Scientific Name	Threatened Category	Presence Text	Buffer Status
Leioproctus douglasiellus a short-tongued bee [66756]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Neopasiphae simplicior A native bee [66821]	Critically Endangered	Species or species habitat known to occur within area	In feature area
MAMMAL			
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pseudocheirus occidentalis Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Setonix brachyurus Quokka [229]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
OTHER			
Westralunio carteri Carter's Freshwater Mussel, Freshwater Mussel [86266]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
PLANT			
Andersonia gracilis Slender Andersonia [14470]	Endangered	Species or species habitat likely to occur within area	In feature area
Anthocercis gracilis Slender Tailflower [11103]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Austrostipa jacobiana [87809]	Critically Endangered	Species or species habitat known to occur within area	In buffer area only
Banksia mimica Summer Honey-pot [82765]	Endangered	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Caladenia huegelii King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat known to occur within area	In feature area
Calytrix breviseta subsp. breviseta Swamp Starflower [23879]	Endangered	Species or species habitat may occur within area	In buffer area only
Conospermum undulatum Wavy-leaved Smokebush [24435]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diuris drummondii Tall Donkey Orchid [4365]	Vulnerable	Species or species habitat known to occur within area	In feature area
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat known to occur within area	In feature area
Diuris purdiei Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat known to occur within area	In feature area
Drakaea elastica Glossy-leaved Hammer Orchid, Glossy- leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat known to occur within area	In feature area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat known to occur within area	In feature area
Eleocharis keigheryi Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Eremophila glabra subsp. chlorella [84927]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Eucalyptus x balanites Cadda Road Mallee, Cadda Mallee [87816]	Endangered	Species or species habitat known to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Goodenia arthrotricha [12448]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Grevillea curviloba subsp. incurva Narrow curved-leaf Grevillea [64909]	Endangered	Species or species habitat may occur within area	In buffer area only
Lepidosperma rostratum Beaked Lepidosperma [14152]	Endangered	Species or species habitat known to occur within area	In feature area
Macarthuria keigheryi Keighery's Macarthuria [64930]	Endangered	Species or species habitat may occur within area	In buffer area only
Synaphea sp. Fairbridge Farm (D.Papenfus 696) Selena's Synaphea [82881]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Synaphea sp. Pinjarra Plain (A.S.George 17182) [86878]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Synaphea sp. Serpentine (G.R.Brand 103) [86879]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Thelymitra stellata Star Sun-orchid [7060]	Endangered	Species or species habitat likely to occur within area	In buffer area only

SHARK

Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In buffer area only
--	------------	--	---------------------

Listed Migratory Species

[[Resource Information](#)]

Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area

Migratory Marine Species

Scientific Name	Threatened Category	Presence Text	Buffer Status
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Migratory Terrestrial Species			
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area	In feature area
Migratory Wetlands Species			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area	In buffer area only
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area	In feature area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area	In buffer area only
Calidris subminuta Long-toed Stint [861]		Roosting known to occur within area	In buffer area only
Charadrius dubius Little Ringed Plover [896]		Roosting known to occur within area	In buffer area only
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area	In feature area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area	In buffer area only
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area	In buffer area only
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area	In buffer area only
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area	In buffer area only
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area	In feature area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area	In buffer area only

Commonwealth Lands

[\[Resource Information \]](#)

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area	In feature area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area	In buffer area only
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area	In feature area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area overfly marine area	In buffer area only
Calidris subminuta Long-toed Stint [861]		Roosting known to occur within area overfly marine area	In buffer area only
Charadrius dubius Little Ringed Plover [896]		Roosting known to occur within area overfly marine area	In buffer area only
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Charadrius ruficapillus Red-capped Plover [881]		Roosting known to occur within area overfly marine area	In buffer area only
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area	In buffer area only
Gallinago stenura Pin-tailed Snipe [841]		Roosting likely to occur within area overfly marine area	In buffer area only
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area	In feature area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area	In buffer area only
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area	In buffer area only
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area	In feature area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area	In buffer area only
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area	In buffer area only
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting known to occur within area overfly marine area	In buffer area only
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area	In buffer area only
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area overfly marine area	In buffer area only
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area	In feature area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area	In buffer area only

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Definitions of Threatened and Priority Flora and Communities

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018*.

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of ‘Specially Protected Fauna’ listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be “*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be “*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be “*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of ≤ 100 ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤ 10 occurrences or a total area of ≤ 200 ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

Categories of Threatened Species pursuant to the Environment Protection and Biodiversity Conservation Act 1999

EPBC Act Category	Department of Environment and Energy Definition
Extinct	A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.
Extinct in the wild	A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:
	(a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or (b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.
Critically endangered	A native species is eligible to be included in the critically endangered category at a particular time if, at that time, it is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.
Endangered	A native species is eligible to be included in the endangered category at a particular time if, at that time
	(a) it is not critically endangered; and (b) it is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.
Vulnerable	A native species is eligible to be included in the vulnerable category at a particular time if, at that time:
	(a) it is not critically endangered or endangered; and (b) it is facing a high risk of extinction in the wild in the medium term future, as determined in accordance with the prescribed criteria.
Conservation dependent	A native species is eligible to be included in the conservation dependent category at a particular time if, at that time: (a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or (b) the following subparagraphs are satisfied: (i) the species is a species of fish; (ii) the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised; (iii) the plan of management is in force under a law of the Commonwealth or of a State or Territory; (iv) cessation of the plan of management would adversely affect the conservation status of the species.

CONSERVATION CATEGORY DEFINITIONS

for Western Australian Ecological Communities

GENERAL DEFINITIONS

An **ecological community** is a naturally occurring assemblage of organisms that occurs in a particular habitat, as defined in the *Biodiversity Conservation Act 2016* (BC Act). Ecological communities may comprise various life forms including plants, animals and microorganisms.

Note: The scale at which ecological communities are defined will often depend on the level of detail in the information source, therefore no particular scale is specified.

A **threatened ecological community** (TEC) means an ecological community that is listed under section 27(1) of the BC Act as a critically endangered, endangered or vulnerable ecological community, or is a rediscovered ecological community to be regarded as a threatened ecological community under section 33 of the BC Act.

An **assemblage** is a defined group of biological entities.

Habitat, as defined in the BC Act, means the biophysical medium or media —

- a) occupied (continuously, periodically or occasionally) by an organism or group of organisms, or
- b) once occupied (continuously, periodically or occasionally) by an organism, or group of organisms, and into which organisms of that kind have the potential to be reintroduced.

An **occurrence** is a discrete example of an ecological community, separated from other examples of the same community by more than 20 metres with, for example: a different ecological community, a sealed road, a building, a water body (for terrestrial communities), or a terrestrial body (for aquatic communities). There is no minimum size of an occurrence of a threatened or priority ecological community. By ensuring that every discrete occurrence is recognised and recorded, future changes in status can be readily monitored.

Adequately surveyed is defined as an ecological community that has been searched for thoroughly in most likely habitats, by relevant experts.

Community structure is defined as the spatial organisation, construction and arrangement of the biological elements comprising a biological assemblage. For example, the vegetation structure (e.g., *Eucalyptus salmonophloia* woodland over scattered small shrubs over dense herbs) or the trophic structure in a faunal assemblage (e.g., dominance by feeders on detritus as distinct from feeders on live plants).

To **modify** an occurrence of an ecological community, as defined in section 44 of the BC Act, means to take action that results in —

- (a) the modification of the occurrence of the threatened ecological community to such an extent that the occurrence is unlikely to recover —
 - (i) its species composition or structure; or
 - (ii) its species composition and structure; or
- (b) the destruction of the occurrence of the threatened ecological community.

Destruction of an occurrence of an ecological community means modification such that reestablishment of ecological processes, species composition or community structure within the range of variability exhibited by the original community is unlikely within the foreseeable future even with positive human intervention.

Modification and destruction are difficult concepts to quantify, and their application will be determined by scientific judgement. Refer to the document [Guidance note – Modification of an occurrence of a threatened ecological community](#) for more information on what constitutes modification and how to determine whether an action is likely to modify an occurrence of a threatened ecological community.

Threatening process means a process that threatens, or may threaten, the survival, abundance or evolutionary development of a native species or ecological community, as defined under the BC Act. Examples of some of the continuing threatening processes in Western Australia include: vegetation clearance; competition and land degradation by introduced fauna; dieback caused by the root-rot fungus (*Phytophthora cinnamomi*); competition and displacement of native plants by introduced flora; hydrological changes (declining groundwater levels); drying climate, fire regimes that cause declines in biodiversity; direct human exploitation and disturbance of ecological communities.

Restoration is defined as returning an ecological community to its pre-disturbance or natural state in terms of abiotic conditions, community structure and species composition.

Rehabilitation is defined as the re-establishment of ecological attributes in a damaged ecological community although the community will remain modified.

LISTED ECOLOGICAL COMMUNITIES

Assessment of the conservation status of ecological communities is carried out in accordance with the BC Act listing criteria and the requirements of [Ministerial Guideline Number 1](#) and [Ministerial Guideline Number 4](#) that adopt the use of the International Union for Conservation of Nature (IUCN) [Red List of Ecosystems Categories and Criteria](#).

CO Collapsed ecological communities

An ecological community listed by order of the Minister as collapsed under section 31(1) of the BC Act. As determined by criteria set out in section 32 of the BC Act, an ecological community is eligible for listing as a collapsed ecological community at a particular time if, at that time —

- (a) there is no reasonable doubt that the last occurrence of the ecological community has collapsed; or
- (b) the ecological community has been so extensively modified throughout its range that no occurrence of it is likely to recover —
 - (i) its species composition or structure; or
 - (ii) its species composition and structure.

CR Critically endangered ecological communities

A threatened ecological community listed in the category of critically endangered under section 27(1)(a) of the BC Act, as determined by criteria set out in section 28 of the BC Act and the ministerial guidelines. A critically endangered ecological community faces an extremely high risk of becoming eligible for listing as a collapsed ecological community in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines.

Examples of use:

- ‘Assemblages of the organic springs and mound springs of the Mandora Marsh area’ is listed as a critically endangered threatened ecological community under the *Biodiversity Conservation Act 2016*.
- ‘Assemblages of the organic springs and mound springs of the Mandora Marsh area’ is listed as critically endangered under the *Biodiversity Conservation Act 2016*.
- Listing reference in a table – column heading: BC Act; row text: CR.

EN Endangered ecological communities

A threatened ecological community listed in the category of endangered ecological community under section 27(1)(b) of the BC Act, as determined by criteria set out in section 29 of the BC Act and the ministerial guidelines. A threatened ecological community faces a very high risk of becoming eligible for listing as a collapsed ecological community in the near future, as determined in accordance with criteria set out in the ministerial guidelines.

Examples of use:

- ‘Herb rich shrublands in clay pans (floristic community type 8 as originally described in Gibson *et al.* (1994))’ is listed as an endangered threatened ecological community under the *Biodiversity Conservation Act 2016*.
- ‘Herb rich shrublands in clay pans (floristic community type 8 as originally described in Gibson *et al.* (1994))’ is listed as endangered under the *Biodiversity Conservation Act 2016*.
- Listing reference in a table – column heading: BC Act; row text: EN.

VU Vulnerable ecological communities

A threatened ecological community listed in the category of vulnerable ecological community under section 27(1)(c) of the BC Act, as determined by criteria set out in section 30 of the BC Act and the ministerial guidelines. A vulnerable ecological community faces a high risk of becoming eligible for listing as a collapsed ecological community in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines.

Examples of use:

- 'Calothamnus graniticus subsp. graniticus heaths on south west coastal granites' is listed as a vulnerable threatened ecological community under the *Biodiversity Conservation Act 2016*.
- 'Calothamnus graniticus subsp. graniticus heaths on south west coastal granites' is listed as vulnerable under the *Biodiversity Conservation Act 2016*.
- Listing reference in a table – column heading: BC Act; row text: VU.

PRIORITY ECOLOGICAL COMMUNITIES

Priority is not a listing category under the BC Act. The Priority Ecological Communities list is maintained by the department and is published on the department's website.

All fauna and flora that may be present in an ecological community are protected in WA following the provisions in Part 10 of the BC Act. The protection applies even when these species occur in an ecological community that is not listed as threatened, and regardless of land tenure (State managed land (Crown land), private land, or Commonwealth land).

Possible threatened ecological communities that do not meet survey criteria or are not adequately defined to enable listing are added to the department's [Priority Ecological Communities for Western Australia list](#) under priority 1, 2 or 3. Ecological communities that are adequately known and not threatened but rare, near threatened, or have recently been removed from the threatened list are placed in priority 4. Conservation dependent ecological communities are placed in priority 5.

P1 Priority 1: Poorly known ecological communities – very few occurrences, very restricted distribution

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of ≤ 100 ha). Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g., within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Examples of use:

- 'Banded Ironstone Hills with *Dryandra arborea*' is listed as a Priority 1 ecological community by the Department of Biodiversity, Conservation and Attractions.
- 'Banded Ironstone Hills with *Dryandra arborea*' is listed as Priority 1 on the DBCA Priority Ecological Communities List.
- Listing reference in a table – column heading: DBCA; row text: P1.

P2 Priority 2: Poorly known ecological communities – few occurrences, restricted distribution

Communities that are known from few occurrences with a restricted distribution (generally ≤ 10 occurrences or a total area of ≤ 200 ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Examples of use:

- 'Aquatic invertebrate communities of peat swamps' is listed as a Priority 2 ecological community by the Department of Biodiversity, Conservation and Attractions.
- 'Aquatic invertebrate communities of peat swamps' is listed as Priority 2 on the DBCA Priority Ecological Communities List.
- Listing reference in a table – column heading: DBCA; row text: P2.

P3 Priority 3: Poorly known ecological communities – inadequately surveyed or not well defined

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them. This category includes three sub-categories:

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation.
- (ii) Communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years).
- (iii) Communities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change, etc.

Examples of use:

- 'Assemblages of gypsum dunes of the central and southern wheatbelt' is listed as a Priority 3(iii) ecological community by the Department of Biodiversity, Conservation and Attractions.
- 'Assemblages of gypsum dunes of the central and southern wheatbelt' is listed as Priority 3(iii) on the DBCA Priority Ecological Communities List.
- Listing reference in a table – column heading: DBCA; row text: P3(iii).

P4 Priority 4: Adequately known ecological communities – rare, near threatened, or recently removed from the threatened list

Ecological communities that are adequately known and either rare but not threatened, near threatened, or have recently been removed from the threatened list. These communities require regular monitoring.

- (i) Rare: ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near threatened: ecological communities that are considered to have been adequately surveyed and that do not qualify as conservation dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Examples of use:

- 'Nimalaica (Nimalarragun) claypan and associated wetland assemblages' is listed as a Priority 4(ii) ecological community by the Department of Biodiversity, Conservation and Attractions.
- 'Nimalaica (Nimalarragun) claypan and associated wetland assemblages' is listed as Priority 4(ii) on the DBCA Priority Ecological Communities List.
- Listing reference in a table: column heading: DBCA, row text: P4(ii).

P5 Priority 5: Conservation dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Categories of Threatened Communities pursuant to the Environment Protection and Biodiversity Conservation Act 1999

Category	Definition
Critically Endangered	(1) An ecological community is eligible to be included in the <i>critically endangered</i> category at a particular time if, at that time, it is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.
Endangered	(2) An ecological community is eligible to be included in the <i>endangered</i> category at a particular time if, at that time: <ul style="list-style-type: none"> (a) it is not critically endangered; and (b) it is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.
Vulnerable	(3) An ecological community is eligible to be included in the <i>vulnerable</i> category at a particular time if, at that time: <ul style="list-style-type: none"> (a) it is not critically endangered nor endangered; and (b) it is facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with the prescribed criteria.
