5.1 Maps and/or spatial data

5.2 Size

- If you propose to clear a patch(es) of vegetation, enter a hectare value for the total size of the area (mark number of trees as zero). For example, “clearing of 5 hectares”.
- If you propose to clear only individual trees (i.e. the shrubs, grasses, groundcover plants will remain intact), provide the number of trees. For example, “clearing of 10 trees”. If any shrubs, grasses, and/or groundcover plants **may** be damaged in the clearing process, enter the total area only.
- If you propose to clear an area of native vegetation within a larger footprint, enter the hectare value for the total size of the area to be cleared (mark number of trees as zero) and the size of the footprint. For example, 5 hectares of clearing within a 10-hectare footprint. This option is only available for purpose permit applications.
- Enter values for **both** number of trees and the size of the area **only** if you are clearing individual trees in one area **and** a patch of vegetation in a different area.
- Please note the following area conversions/calculations:

1 hectare = 10,000 m²

1 acre = 0.4 hectares/4,000 m²

1 tree = 0.01 hectares/100 m²

Area of circle = 3.14 x radius²

Area of a rectangle = length x width

Area of a triangle = ½ length x perpendicular height

Total area of clearing proposed (hectares)	9.8
Footprint of clearing (hectares) (purpose permit only)	9.8
Number of individual trees to be cleared	0

Note: Calculate the area of a tree based on the area encompassed by the tree’s drip line; that being the outermost circumference of the tree’s canopy.

5.3 Purpose

<p>Provide the reason for proposed clearing (e.g. road construction, grazing and pasture, hazard reduction, horticulture, timber harvesting etc.).</p> <p>If applicable, provide any additional project overview or explain in detail the activities on the property (e.g. provide context of work proposed and describe how clearing will contribute to overall work activities onsite etc.).</p>	<p>The proposed clearing allows for constructing 24 production bores and 33 monitoring bores. The clearing areas will include access tracks and drill pads.</p> <p>The access tracks will be 4m wide and will only be required where existing historical exploration mining tracks cannot be used to access the proposed bore locations.</p> <p>The drill pad size varies depending on whether the pad will be used for monitoring or a production bore. The monitoring bore drill pad clearing area is 25 m x 25 m (or 625 m²). The production bore drill pad clearing area is 50 m long by 26 m wide (or 1,300 m²)</p> <p>The installation of these monitoring and production bores is required to support the development of the Kariyarra Water Scheme (KWS), a project being delivered in partnership between Vysarn Asset Management (VAM) and the Kariyarra Aboriginal Corporation (KAC).The KWS aims to sustainably manage the abstraction and diversion of groundwater to supply the Boodarie Strategic Industrial Area (BSIA) and the broader Port Hedland.</p> <p>The proposed clearing, specific to the drill pads and access tracks, will facilitate the completion of the KWS drilling and aquifer testing program and the associated Hydrogeological Report (Type 3) and Groundwater Operating Strategy per the requirements of DWER 5C licence to take water under the RiWI Act.</p>
<p>Specify what the final land use will be after clearing</p>	<p>Water abstraction and monitoring.</p>

5.4 Method

<p>Proposed method of clearing (i.e. burning, cutting, draining, flooding, grazing, mechanical clearing/bulldozing or other – specify)</p>	<p>Mechanical clearing – Grader, skid steer and front-end loader.</p>
--	---

5.5 Timeframe

<p>Period within which you propose to do the clearing (e.g. 1/7/2022 to 30/8/2024)</p>	<p>Start date: 03/03/2024 End date: 30/06/2024</p>
--	--

Note: The clearing referral process is not suitable for any clearing that is expected to take longer than two years.

5.6 Pre-application scoping

Historic clearing of native vegetation in the Swan Coastal Plain and Avon Wheatbelt [Interim Biogeographic Regionalisation for Australia](#) (IBRA) bioregions has been extensive.

DWER/DEMIRS strongly recommends a pre-application meeting if you propose to clear native vegetation within these bioregions.

<p>Do you propose to clear native vegetation within the Swan Coastal Plain or Avon Wheatbelt bioregions?</p>	<input type="checkbox"/> Yes – complete section below	
	<input type="checkbox"/> I have had a pre-application meeting with DWER/DEMIRS	
	Insert date of meeting and officer name(s):	
	<input type="checkbox"/> I have contacted DWER/DEMIRS in relation to a pre-application meeting and been advised that a meeting is unnecessary in this case.	
	Insert date of conversation and officer name(s):	
	<input type="checkbox"/> I have not had a pre-application meeting with DWER/DEMIRS. I understand that this may increase the likelihood of requests for further information and/or delays in assessment.	
	<input checked="" type="checkbox"/> No – proceed to next question.	

Part 6 – Mitigation hierarchy

6.1 Avoidance and mitigation

Explain how you have, or will, put avoidance and mitigation measures in place to eliminate, reduce, or otherwise mitigate the need for and scale of the proposed clearing of native vegetation.

Attach supporting documents to substantiate your explanation.

Your explanation should demonstrate you have planned the project so that the least clearing possible is to be undertaken. The following questions may help you frame your explanation:

- Why did you select this location and amount of clearing?
- What alternatives to clearing – e.g. engineering solutions – did you consider? (Attach design drawings where applicable)
- What changes, if any, did you make to the location or amount of clearing to reduce the impacts of the clearing?

Note: If you do not demonstrate adequate efforts to avoid and mitigate clearing, DWER/DEMIRS will ask you to do so during the validation of this application. Offsets will only be considered by DWER/DEMIRS as a last resort, once avoidance and minimisation measures have been clearly demonstrated.

Provide the avoidance details (e.g. retention of vegetation on property)	<p>Bores have been located adjacent to existing historical exploration mining tracks wherever possible to avoid and minimise the clearing area.</p> <p>To reduce the size of drill pads where possible, and therefore minimise the clearing area, the drill pads have been separated into two sizes for production bores and monitoring bores.</p> <p>New access tracks will be limited to 4 m in width to allow access for the required vehicles/plants, such as drill rigs and test pumping plants and to minimise the clearing area.</p>
Provide the mitigation details (e.g. management of weed spread, rehabilitation)	<p>The following management measures will be implemented during the clearing and the construction of the production and monitoring bore pads and access tracks:</p> <ul style="list-style-type: none"> • No clearing is permitted outside the approved NVCP area. • Clearing will be minimised by placing the bore assets and access tracks in existing cleared locations. • Works will be undertaken systematically to minimise re-run and compaction of access tracks. • The clearing locations are to be demarcated with flagging tape, GPS or similar before clearing activities are commenced. • An environmental specialist or Site Supervisor must check clearing areas before clearing to ensure no more than 9.8 ha of clearing is undertaken. • A pre-clearing environmental toolbox will be held so all staff know their responsibilities under the approved clearing permit. • Native vegetation will be cleared slowly and progressively in one direction, allowing fauna to move away from the clearing area. • Vehicles and machinery will be moved in convoy along access tracks/routes and will not enter adjacent vegetation. • Representative(s) from the KAC will be present for the duration of the clearing and bore construction program.

Please provide the IBSA number(s) – or submission number(s) if the IBSA number has not yet been issued – in the space provided. Note that a submission number is not confirmation that a biodiversity survey has been accepted and is not the same as an IBSA number. IBSA numbers are only issued once a survey has been accepted. Once an IBSA number is issued, please notify DWER/DEMIRS. Please note DWER/DEMIRS will suspend the assessment timeframes for your application until you provide the IBSA number(s).

Part 8 – Assessment bilateral agreement

The native vegetation clearing processes under Part V of the EP Act have been accredited by the Commonwealth of Australia under the EPBC Act and so can be assessed under an assessment bilateral agreement.

To be assessed this way, the proposed clearing action must have been referred to the Commonwealth under the EPBC Act and deemed a ‘**controlled action**’ before you submit this form. DWER/DEMIRS will decline to deal with your application without the proposed clearing first being deemed a controlled action.

For further information, see DWER’s [guidance on the assessment bilateral agreement](#).

Part 9 – Other approvals

9.1 Environmental impact assessment (Part IV of the EP Act)

Clearing may be referred to the EPA if it is considered to be part of a 'significant proposal', as defined by section 37B(1) of the EP Act, or will likely to be part of a larger development. An example is when the clearing is for a road to a future mine.

Section 37B(1) of the EP Act defines a 'significant proposal' as "a proposal likely, if implemented, to have a significant effect on the environment". If a decision-making authority (e.g. DWER/DEMIRS) considers the proposal in this form is likely to constitute a 'significant proposal', under section 38(5) of the EP Act they must refer the proposal to the EPA under Part IV, if such a referral has not already been made.
