Basis of Report

This report has been prepared by SLR Consulting Australia (SLR) with all reasonable skill, care and diligence, and taking account of the timescale and resources allocated to it by agreement with Horizon Power (the Client). Information reported herein is based on the interpretation of data collected, which has been accepted in good faith as being accurate and valid.

This report is for the exclusive use of the Client. No warranties or guarantees are expressed or should be inferred by any third parties. This report may not be relied upon by other parties without written consent from SLR.

SLR disclaims any responsibility to the Client and others in respect of any matters outside the agreed scope of the work.

Executive Summary

Horizon Power commissioned SLR Consulting Australia Pty Ltd to undertake a detailed flora and vegetation, targeted significant flora, basic terrestrial vertebrate fauna, and targeted significant fauna survey for the proposed Atlas Ridley Magnetite Project Connection. The Survey Area covers approximately 10,363 hectares and runs in an approximate east-west alignment from just south of South Hedland to approximately 50 km east of Port Hedland airport in the Pilbara bioregion of Western Australia.

The objective of the survey was to identify key flora, vegetation, and fauna values or other environmental features within the Survey Area as part of the environmental impact assessment process. This report presents the findings of the survey.

Flora and Vegetation

The flora desktop assessment conducted prior to the survey identified 33 conservation significant species occurring within 50 km of the Survey Area. A pre-survey likelihood of occurrence assessment determined 11 species as having a high likelihood of occurrence, none as having a medium likelihood of occurrence, and the remaining 22 species as having a low likelihood of occurrence.

The detailed flora and vegetation survey recorded the floristic composition and vegetation types from 26 quadrats, 28 relevés, 250 mapping notes, and opportunistic observations. A total of 172 taxa were recorded from 94 genera across 40 families.

No Threatened flora taxa were recorded within the Survey Area. Two Priority flora taxa, both of which had a high pre-survey likelihood of occurrence, were recorded within the Survey Area. *Tephrosia rosea* subsp. Port Hedland (A.S. George 1114) (P1) was recorded at one location within a roadside drain, and *Gymnanthera cunninghamii* (P3) was recorded in two locations within a major drainage.

Nineteen specimens could not be identified to species level due to the generally sterile and dry conditions at the time of survey. Eight introduced (weed) taxa were recorded during the survey, of which one is a Declared Pest (**Calotropis procera*). Weed abundance was considered standard for the region, with common Pilbara weeds such as **Cenchrus ciliaris*, **Vachellia farnesiana*, **Malvastrum americanum* and **Aerva javanica* regularly observed.

Fourteen vegetation types were described and mapped across five broad landforms (ironstone hilltops and ridges, outcroppings, plains, low lying floodplains/flats/minor drainages and major drainages), none of which were considered analogous to Threatened or Priority Ecological Communities. Vegetation condition within the Survey Area ranged from Degraded to Very Good with the majority considered to be in Very Good condition. Disturbances were widespread in the form of pastoralism/cattle, weeds, litter and historical clearing for infrastructure.

Vertebrate Fauna

The basic and targeted terrestrial vertebrate fauna survey recorded fauna using a variety of detection methods including opportunistic observations, ground searching, and deploying Autonomous Recording Units (ARUs). Fauna habitat mapping was based on a combination of field observations, vegetation mapping, fauna habitat assessment data, and aerial imagery. Nine fauna habitats were mapped within the Survey Area, of which the Low *Acacia stellaticeps* over Triodia, Mixed Acacia Shrubs and Triodia Plains, Outcrops and Breakaways, and Stony Hills habitats represent the most value to fauna assemblages overall.

A total of 63 fauna taxa from 34 families were recorded, comprising 33 birds, 14 mammals, and 16 reptiles. Two significant taxa were recorded during the fauna survey, Western Pebble-mound Mouse (*Pseudomys chapmani*) – P4 (DBCA, and Pilbara Leaf-nosed Bat (*Rhinonicteris aurantia*) (Pilbara form) – VU (BC Act & EPBC Act).

A further seven significant fauna taxa have been recorded within the Survey Area during previous surveys, and nine significant fauna taxa were assessed as having a high likelihood, 24 significant fauna taxa were assessed as having a medium likelihood, and 33 significant fauna taxa were assessed as having have a low likelihood of occurring within the Survey Area.

Three introduced taxa were recorded during the survey, European Cattle (**Bos primigenius taurus*), Cat (**Felis catus*), and Domestic Pigeon/Rock Dove (**Columba livia*).

1.0 Introduction

1.1 The Project

Horizon Power commissioned SLR Consulting Australia Pty Ltd (SLR) to undertake a detailed flora and vegetation, targeted flora, basic terrestrial vertebrate fauna, and targeted significant fauna survey for the proposed Atlas Ridley Magnetite Project Connection. The survey was undertaken within the Pilbara bioregion of Western Australia, covering 10,363 hectares from South Hedland in the west to Pardoo Iron Ore Mine in the east (the Survey Area) (**Map 1**). All maps are provided in Appendix A.

1.2 Objectives and Scope

The specific objectives of the biological assessments were to:

- Carry out an initial desktop assessment to determine environmental values and significant flora, vegetation, fauna or other environmental features (such as riparian areas, wetlands) relating to the project area.
- Carry out an (in season) detailed flora and vegetation survey, basic fauna and targeted fauna survey focusing on suitable habitat likely to support conservation significant fauna.
- Prepare a technical combined flora and fauna survey report.
- Provide all spatial/mapping data collected during the survey in IBSA format.

2.0 Background

2.1 Statutory and Regulatory Framework

Western Australian flora, vegetation, and fauna is governed by the following legislative measures:

- *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act). (Commonwealth of Australia, 1999).
- *Biodiversity Conservation Act 2016* (WA) (BC Act) (Biodiversity Conservation Act 2016, 2016).
- *Environmental Protection Act 1986* (WA) (EP Act) (Environmental Protection Act 1986, 1986).
- *Biosecurity and Agriculture Management Act 2007* (WA) (BAM Act) (Biosecurity and Agriculture Management Act 2007, 2007).

In addition to these legislative measures, the following non-legislative lists are considered on a case-by-case basis:

- WA Department of Biodiversity Conservation and Attractions (DBCA) Priority lists for fauna, flora, and ecological communities.
- Weeds of National Significance (WoNS).
- Recognition of locally significant populations by DBCA.

The EIA process is supported by guidance documents published by the Environmental Protection Authority (EPA), DBCA and the Department of Climate Change, Energy, the Environment and Water (DCCEEW).

Western Australia

- *Environmental Factor Guideline - Flora and Vegetation* (EPA, 2016a).
- *Environmental Factor Guideline – Terrestrial Fauna* (EPA, 2016b).
- *Guidelines for surveys to detect the presence of bilbies and assess the importance of habitat in Western Australia* (DBCA, 2017).
- *Interim Guideline for Preliminary Surveys of Night Parrot (Pezoporus occidentalis) in Western Australia* (DPAW, 2017).
- *Technical Guidance – Flora and vegetation surveys for environmental impact assessment* (EPA, 2016c).
- *Technical Guidance – Terrestrial vertebrate fauna surveys for environmental impact assessment* (Environmental Protection Authority, 2020).

Commonwealth

- *EPBC Act Referral guideline for the endangered northern quoll Dasyurus hallucatus* (DoE, 2016).
- *Matters of National Environmental Significance – Significant Impact Guidelines 1.1* (DoE, 2013).
- *Survey guidelines for Australia's threatened bats* (DEWHA, 2010a).
- *Survey guidelines for Australia's threatened birds* (DEWHA, 2010b).

- *Survey guidelines for Australia's threatened frogs* (DEWHA, 2010c).
- *Survey guidelines for Australia's threatened mammals* (DSEWPaC, 2011a).
- *Survey guidelines for Australia's threatened reptiles* (DSEWPaC, 2011b).

2.2 Existing Environment

2.2.1 Climate

The closest long-term Bureau of Meteorology weather station with a complete dataset is the Port Hedland Airport Weather Station (Station 004032), located approximately 89 km west of the Survey Area.

The long-term mean minimum temperature for Port Hedland Airport ranges from 12.5˚C (July) to 25.7˚C (January) (1948 to 2024) and the long-term mean maximum temperature ranges from 27.4˚C (July) to 36.8˚C (December and March) (1948 to 2022) (**Figure 1**) (Bureau of Meteorology, 2024).

The Port Hedland Airport weather station recorded 100.6 mm of rainfall in the 12 months prior to the survey (March 2023 to February 2024), which is 217.9 mm below the long-term average of 318.5 mm (Bureau of Meteorology, 2024). In the three months prior to the survey (December 2023 to February 2024), just 24 mm of rainfall was recorded, which is 146.6 mm below the long-term average of 170.6 mm for the same time period (Bureau of Meteorology, 2024).

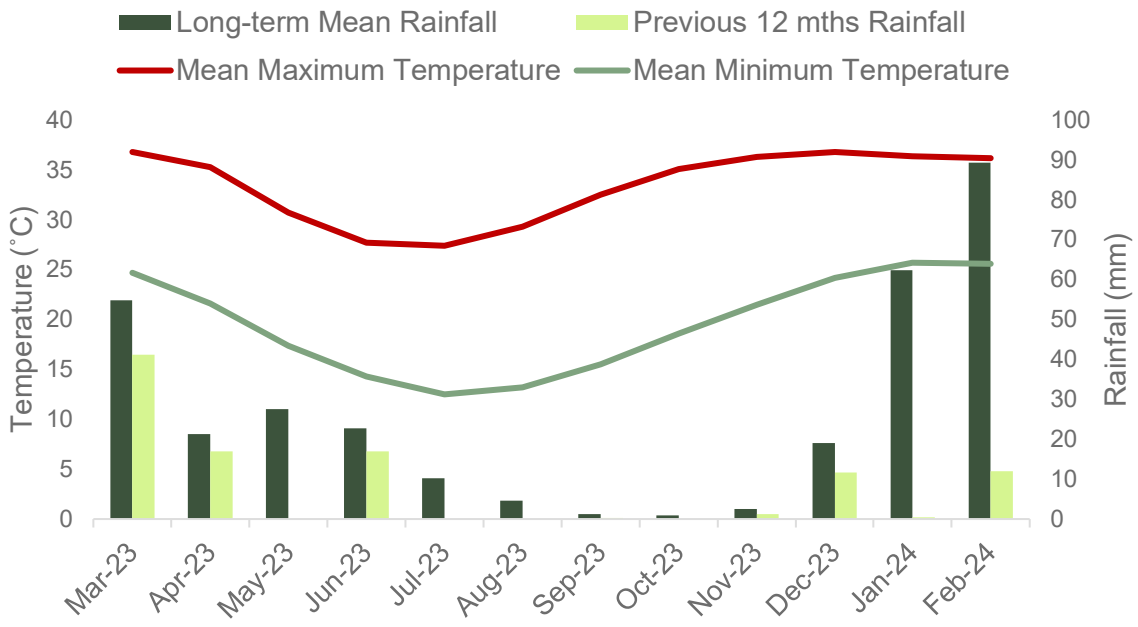

Figure 1: Climate graph of the Port Hedland Airport Weather Station

2.2.2 Interim Biogeographic Regionalisation of Australia

The Interim Biogeographic Regionalisation of Australia (IBRA) divides Australia into 89 bioregions based on major biological, geographical, and geological attributes. These bioregions are subdivided into 419 subregions as part of a refinement of the IBRA framework (DCCEEW, 2023). The Survey Area occurs within two subregions of the Pilbara bioregion: the Roebourne (PIL04) and the Chichester (PIL01) subregions (**Map 2**).

The Roebourne (PIL04) subregion is represented by quaternary alluvial and older colluvial coastal and sub-coastal plains with a grass savannah of mixed bunch and hummock grasses, and dwarf shrub steppe of *Acacia stellaticeps* or *A. pyrifolia* and *A. inaequilatera* (Kendrick & Stanley, 2001). Uplands are dominated by *Triodia* hummock grasslands. Ephemeral drainage lines support *Eucalyptus victrix* or *Corymbia hamersleyana* woodlands (Kendrick & Stanley, 2001).

The Chichester (PIL01) subregion comprises the northern section of the Pilbara Craton and is characterised by undulating Archaean granite and basalt plains include significant areas of basaltic ranges. The subregion is represented by plains supporting a shrub steppe characterised by *Acacia inaequilatera* over *Triodia wiseana* hummock grasslands, and ranges supporting *Eucalyptus leucophloia* tree steppes. The climate is Semi-desert-tropical and receives 300 mm of rainfall annually, with drainage occurring to the north via numerous rivers (e.g. De Grey, Oakover, Nullagine, Shaw, Yule, Sherlock) (Kendrick & McKenzie, 2001).

2.2.3 Soil Landscapes and Land Systems

Soil landscapes and land system mapping of Western Australia describes broad soil and landscape characteristics from regional to local scales, ranging from 1:20,000 to 1:250,000 (DPIRD, 2018). The Survey Area occurs within eight land systems (**Table 1, Map 3**).

Table 1: Land Systems within the Survey Area

Land System		Description (DPIRD, 2018)
Name	Code	
Mallina System	281Ma	Sandy surfaced alluvial plains supporting soft spinifex grasslands and minor hard spinifex and tussock grasslands.
Uaroo System	281Ua	Broad sandy plains, pebbly plains and drainage tracts supporting hard and soft spinifex hummock grasslands with scattered acacia shrubs.
River System	281Ri	Narrow, seasonally active flood plains and major river channels supporting moderately close, tall shrublands or woodlands of acacias and fringing communities of eucalypts sometimes with tussock grasses or spinifex.
Boolaloo System	281Bo	Granite hills, domes, tor fields and sandy plains supporting spinifex grasslands with scattered shrubs.
Macroy System	281Mc	Stony plains and occasional tor fields based on granite supporting hard and soft spinifex shrubby grasslands.
Capricorn System	281Cp	Rugged sandstone hills, ridges, stony footslopes and interfluves supporting low acacia shrublands or hard spinifex grasslands with scattered shrubs.
Paradise System	281Pd	Alluvial plains supporting soft spinifex grasslands and tussock grasslands.
Boolgeeda System	280Bg	Stony lower slopes and plains below hill systems supporting hard and soft spinifex grasslands or mulga shrublands.

2.2.4 Hydrography

Hydrographic features intersecting, and in the vicinity of, the Survey Area are shown in **Map 4** (DWER, 2018). Three major river systems (Turner River, King Edward and Devil Creek) with associated drainage channels intersect the Survey Area, flowing in a northerly direction before discharging into the Indian Ocean east of Port Hedland.

2.2.5 Broad Vegetation Types

Mapping of pre-European vegetation in Western Australia was completed on a broad scale (1:1,000,000) by Beard (1976). These vegetation types were later refined by Shepherd *et al.* (Shepherd, Beeston, and Hopkins, 2002) resulting in 819 vegetation types.

Four broad vegetation system associations are mapped over the Survey Area (**Map 5**). Representation of the system associations at a local, regional, and state level is shown in **Table 2**.

- Abydos Plain (Abydos Plain 589): Short bunch-grass savanna / Grass-steppe
- Abydos Plain (Abydos Plain 93): Hummock grasslands, shrub steppe; kanji over soft spinifex
- Abydos Plain (Abydos Plain 619): Wheatbelt; York gum, salmon gum etc. *Eucalyptus loxophleba*, *E. salmonophloia*. Goldfields; gimlet, redwood etc. *E. salubris*, *E. oleosa*. Riverine; rivergum *E. camaldulensis*.
- Abydos Plain (Abydos Plain 647): Shrub-steppe - hummock grassland with scattered shrubs or mallee *Triodia* spp. *Acacia* spp., *Grevillea* spp. *Eucalyptus* spp.

Table 2: Broad Vegetation Associations within the Survey Area and their Representation at the State, Regional and Local Levels (Government of Western Australia, 2019)

Vegetation Association	Extent			
	Pre-European (ha)	Current (ha)	Remaining (%)	Managed in DBCA Lands (%)
Representation across Western Australia				
Abydos Plain 589	807,698.58	802,713.40	99.38	1.91
Abydos Plain 619	119,373.78	118,205.01	99.02	0.2
Abydos Plain 647	195,860.89	191,711.41	97.88	0
Abydos Plain 93	3,044,309.52	3,040,640.98	99.88	1.96
Representation across the Pilbara Bioregion				
Abydos Plain 589	728,768.20	724,695.82	99.44	2.11

Abydos Plain 647	180,908.49	176,759.02	97.71	n/a
Abydos Plain 93	1,015,339.22	1,014,599.99	99.93	n/a

*as a portion of the current extent

2.2.6 Environmentally Sensitive and Conservation Areas

Environmentally Sensitive Areas (ESAs) are declared by the Department of Water and Environmental Regulation (DWER) to prevent the degradation of important environmental values such as Threatened flora, Threatened Ecological Communities (TECs) or significant wetlands.

The Survey Area is not identified within a conservation area (**Map 6**). The closest mapped ESAs to the Survey Area is the De Grey River located approximately 9.5 kms to the east of the north-eastern end of the Survey Area and the Leslie Saltfields System located approximately 8 kms to the north at its closest point (**Map 6**) (DWER, 2023).

2.2.7 Land Use

Pastoral stations and mining tenements cover almost the entirety of the Survey Area, excluding the far western end. Pippingarra pastoral station occupies majority of the western half of the Survey Area, Strelley pastoral station occupies most of the eastern half, while the far eastern end is occupied by De Grey station (DMIRS, 2024; DPLH, 2023).

3.0 Methods

The surveys documented in this report were undertaken in accordance with relevant EPA and DAWE guidelines (see **Section 2.1**).

3.1 Desktop Assessment

3.1.1 Literature Review

Background information on the Survey Area and surrounds (the Desktop Study Area) was compiled prior to the field survey. The literature review considered a selection of relevant reports detailing assessments undertaken in the region that were either publicly available from sources such as the Index of Biodiversity Surveys for Assessments (IBSA) website, the EPA Consultation Hub, or internet searches, or provided by the client. These reports are listed below and summarised in **Appendix B**.

- De Grey South Borefield Biological Surveys (SLR Consulting, 2023), 10 km east of the Survey Area.
- Detailed Flora and Vegetation Assessment, Ridley Magnetite Project (Focused Vision, 2023), encompassing current Survey Area.
- Flora and Vegetation Assessment, Port Hedland Regional, directly west of the survey area (ENV Australia Pty Ltd, 2011)

- Flora and Vegetation Assessment, Corunna Downs Intersection Works (Woodman Environmental, 2017), approximately 90 km southeast of the survey area.
- Corunna Downs Project, Level 2 Flora, and Vegetation Assessment (Woodman Environmental, 2016), approximately 90 km southeast of the survey area.
- Wodgina Gas Pipeline, Detailed Flora, and Vegetation Survey (360 Environmental Pty Ltd, 2018a), approximately 30 km southeast of the survey area.
- Roy Hill Port Facility Power Line Port Hedland, Ecological Assessment (GHD, 2016), approximately 15 km north of the survey area.
- Flora and Fauna survey Port Hedland International Airport – Highway Precinct 2 (Emerge Associates, 2019), approximately 10 km north of the survey area.
- Flora and Vegetation Reconnaissance Survey of Spoilbank Marina Project Area(Strategen JBS&G, 2020), approximately 15 km north of the survey area.
- Ridley Detailed Terrestrial Vertebrate Fauna Survey (Biota, 2024), overlapping with the eastern section of the survey area.
- Ridley Services Corridors Basic and Targeted Fauna Survey (Biota, 2023), overlapping the survey area.
- Detailed terrestrial fauna and targeted Bilby survey for the Port Hedland Solar Farm Project (Phoenix Environmental, 2022), overlapping the western section of the survey area.
- Wodgina Gas Pipeline targeted Fauna Survey (360 Environmental Pty Ltd, 2018b), 20 km southwest of the Survey Area.
- Wodgina Project: Level 1 Fauna Survey, Targeted Conservation Significant Fauna Survey and Desktop Assessment (Stantec Australia Pty Ltd, 2018), 80 km south of the Survey Area.
- Pardoo Stage 3 Irrigation Project and 80 Mile Beach Ramsar Site Fauna Assessment (Bamford Consulting Ecologists, 2017b), 100 km east of the Survey Area.
- Assessment of the Bilby *Macrotis lagotis* Pardoo Station; Stage 2 areas (Bamford Consulting Ecologists, 2017a), 100 km east of the Survey Area.
- Assessment of the Bilby *Macrotis lagotis* Pardoo Station; Stage 2 and 3 project areas (Bamford Consulting Ecologists, 2016), 100 km east of the Survey Area.
- Supplementary Flora and Vegetation Survey and Terrestrial Fauna Survey for the Balla Balla Infrastructure Group Ltd (Phoenix Environmental, 2018), 100 km west of the Survey Area.
- Terrestrial Fauna Surveys for the Balla Balla Railway Project (Phoenix Environmental, 2014), 100 km west of the Survey Area.

3.1.2 Database Searches

Database searches were undertaken to compile a list of flora and fauna known to occur in the Desktop Study Area and identify significant flora, fauna, and ecological communities with potential to occur within the Survey Area (Table 3).

Table 3: Database Search details

Database name	Date received	Search target	Buffer around the Survey Area
Threatened and Priority Ecological Communities database search (DBCA, 2024c)	26 February 2024	TECs and PECs	50 km
Threatened and Priority Flora (TPFL) database search (DBCA, 2024e)	15 January 2024	Threatened and Priority flora	50 km
Western Australian Herbarium Flora database search (DBCA, 2024f)	15 January 2024	Threatened and Priority flora	50 km
Threatened and Priority Fauna database search (DBCA, 2024d)	15 January 2024	Threatened and Priority fauna	50 km
Protected Matters Search Tool (PMST) (DCCEEW, 2024a)	16 January 2024	Threatened flora, fauna, and ecological communities	50 km
NatureMap (DBCA, 2024b)	22 January 2024	Flora and fauna	50 km

3.1.3 Likelihood of Occurrence

Significant flora and fauna taxa identified during the desktop assessment were assessed to determine the likelihood of their occurrence within the Survey Area before and after the field survey. The assessment used the likelihood of occurrence criteria presented in Table 4.

Taxa listed as Marine only under the EPBC Act were not considered to be significant taxa because the Marine listing does not constitute MNES under the EPBC Act. Additionally, erroneous records (i.e. records that occur well outside a taxon's known distribution) were excluded from consideration. Only taxa that have been recorded within the Survey Area or were assessed as having a high or medium likelihood of occurrence are discussed in detail.

Table 4: Likelihood of occurrence criteria

Rank	Criteria
Recorded	The taxon was recorded within the Survey Area during the current survey.
Previously Recorded	The taxon has been previously recorded within the Survey Area according to database search or literature review results.
High (Likely to occur)	There are existing records of the taxon near the Survey Area (within 20 km), suitable habitat is present within the Survey Area, and, for fauna, the taxon has been recorded within the Desktop Study Area in the last 15 years.
Medium (May occur)	There are existing records of the taxon within the Desktop Study Area, however, the taxon does meet the criteria for high likelihood, or suitable habitat within the Survey Area is marginal or limited in extent, or, for fauna, the taxon has not been recorded within the Desktop Study Area in the last 15 years.
Low (Unlikely to occur)	Suitable habitat is not present within the Survey Area, or the taxon is very infrequently recorded in the locality despite reasonable previous search effort, or the taxon is believed to be extinct or locally extinct.

3.2 Field Survey

3.2.1 Survey Timing

The biological assessments were undertaken during one trip from 1st to 10th March 2024 **Table 5**.

Table 5: Survey Timing and Personne

Trip	Scope	Date	Personnel	Person Field Days
1. Flora and Fauna	• Establishment of flora sites • Preliminary vegetation and condition mapping • Inventory of vascular flora • Targeted flora searches during traverses between flora sites • Targeted fauna survey • Basic fauna survey	01/03/2024-10/03/2024	Lukas Geidans Grant Buller Jack Hardie Lewis Berry	40

3.2.2 Field Personnel and Licences

The flora and vegetation surveys were undertaken by Senior Botanist Grant Buller and Botanist Jack Hardie under flora licences FB62000321-2 and FB62000389-02, respectively. The flora field team has a combined 5.5 years' experience conducting surveys of similar scope in the Pilbara region of Western Australia.

The basic terrestrial vertebrate fauna survey was undertaken by Associate Ecologist Lukas Geidans, who has 4.5 years' experience, and Zoologist Lewis Berry who has 2 years' experience, conducting surveys of similar scope in the Pilbara. The fauna fieldwork was completed under Fauna Taking (Biological Assessment) License – Regulation 27 (BA27000816) and an authorisation to take or disturb threatened species under Section 40 of the BC Act (TFA 2223-0222). Animal ethics approval was obtained under scientific use licence number U336 / 2023 - 2025 and permit number WAEC 24-02-11.

During the survey, SLR personnel were accompanied by Traditional Owners from the Kariyarra group to the west of the King Edward River, and to the east by traditional owners from the Wanparta group.

3.2.3 Weather Conditions

Weather conditions during the fauna survey are presented in Table 6. Daily temperature and rainfall data is from the Port Hedland Weather Station (Station 004032) (BoM, 2024). Weather conditions can impact potential detection of fauna taxa during a survey.

Table 6: Field survey weather conditions

Date	Temperature (°C)		Rainfall (mm)
	Min	Max	
01/03/2024	28.7	35.0	0
02/03/2024	27.8	33.7	1.8
03/03/2024	26.4	34.4	0
04/03/2024	26.5	34.1	0

Date	Temperature (°C)		Rainfall (mm)
	Min	Max	
05/03/2024	25.2	34	8.4
06/03/2024	28.3	34.7	0
07/03/2024	27.1	35.5	0
08/03/2024	27.4	36.2	8
09/03/2024	27.9	35.2	0
10/03/204	28	34.5	0

3.3 Flora and Vegetation

3.3.1 Field Survey

The detailed flora and vegetation survey was undertaken from 1 - 10 March 2024. A handheld Fulcrum mobile data collection device was used to record data, and mapping notes, opportunistic flora collections and photographs were also taken where required. The survey effort showing flora site locations and GPS track logs is shown in **Map 7**.

Vegetation types were described based on their structure and species composition, and condition was assessed according to the Eremaean and Northern Botanical Provinces vegetation condition scale (EPA, 2016c). Broad vegetation and condition mapping was conducted in the field, with boundaries delineated over aerial photography, at a scale of 1:2,000. Broad vegetation units were refined based on taxonomic identification of flora collections, and mapping notes taken during the field survey. Vegetation condition mapping was refined based on site data and mapping notes. Finalised polygons were digitised and produced as electronic mapping data using GIS software.

3.3.2 Establishment of Flora Sites

Indicative site selection was undertaken prior to the survey based on aerial photography and available literature. The number and locations of flora sites were then adjusted on site to achieve sites most representative of the vegetation present. Where possible, at least three flora sites were established in each vegetation type within the Survey Area. In instances where vegetation types were not large enough to accommodate three flora sites, one or two sites were established.

Flora sites consisted of either quadrats or relevés. Quadrats were 50 x 50 m with corners aligned to northwest, northeast, southeast and southwest, and were measured out using measuring tapes. Fence droppers are generally used as standard practice for marking north-west corners, however these were not used to avoid ground disturbance in accordance with traditional owner requirements. Relevés comprised unbounded sites of approximately 50 x 50 m where possible, or alternate configurations approximating 2500 m^2 (as required in linear areas such as drainage lines, gullies, and narrow ridge lines). A comprehensive list of the flora present at the time of sampling was recorded for both quadrat and relevé sites.

Flora site locations were recorded using a GPS-enabled handheld device, with points recorded at each corner of a quadrat, the start and finish point of linear relevés, and the central point of circular relevés. The following information was recorded at each flora site:

- Site code.
- Date and personnel.
- Landform and soil description.

- Relevant site descriptors including, slope, aspect, litter cover, bare ground cover, and fire history.
- Inventory of vascular flora including the approximate average height and percentage foliar cover for each taxon.
- Vegetation description in accordance with the National Vegetation Information System (NVIS) Level 5 'association' whereby the dominant growth form, height, cover, and species (three species) for the three traditional strata (upper, mid, and ground) are described.
- Vegetation condition in accordance with the Eremaean and Northern Botanical Provinces vegetation condition scale (EPA, 2016c).
- Evidence of disturbance (for example clearing, rubbish, feral animals, weed incursion, and evidence of feral animals and dieback) where present.
- Photograph of the vegetation occurring within the site.

A total of 54 flora sites comprising 26 quadrats and 28 relevés were established within the Survey Area. An additional approximately 250 mapping notes were completed to aid vegetation mapping. Flora site locations are shown in **Map 7.**

3.3.3 Opportunistic Flora

Flora taxa observed outside flora sites were recorded opportunistically. When significant flora, Declared Pests (DPs), or WoNS were encountered opportunistically, a GPS location and count of the individuals present was recorded.

3.3.4 Targeted Searching

Prior to the survey a list of significant flora taxa with the potential to occur within the Survey Area was compiled (see Section 3.1.3). Field personnel familiarised themselves with photographs, reference samples, and descriptions of these taxa before conducting the survey.

Targeted searching was undertaken within habitat suitable for Threatened and Priority flora as per standard practice in the Pilbara. The entire Survey Area was not systematically searched. Potential habitat within the proposed footprint was prioritised over areas outside the proposed footprint.

When Threatened or Priority flora were encountered in the field a GPS location was taken and a count of individuals was recorded, followed by a search in the local vicinity to determine if any other individuals were present nearby and delineate population boundaries where relevant and possible. Specimens of potential significant flora that could not be identified in the field were collected for identification and lodgement at the Western Australian Herbarium (WAH).

3.3.5 Vegetation Type and Condition Mapping

Vegetation type and condition mapping was initially conducted in the field with boundaries delineated over aerial photography at a scale of 1:5,000. Vegetation types were refined based on taxonomic identification of flora collections and mapping notes taken during the field survey. Further validation of vegetation types was undertaken using multivariate analysis of data collected from the quadrats and relevés. Vegetation condition mapping was refined based on site data and mapping notes. Polygons were digitised using GIS software.

3.3.6 Taxonomy and Nomenclature

Where field identification of plant taxa was not possible, specimens were collected for identification using resources of the WAH. Identification of flora collections was completed by SLR Principal Botanist Simon Colwill and WAH taxonomist Mike Hislop.

The finalised species list was checked against FloraBase (Department of Biodiversity Conservation and Attractions, 2023) to determine the conservation status and known distribution of each taxon. Introduced species were compared against the current BAM Act Declared Plants list the WoNS list to determine their control status (DAWE, 2023; DPIRD, 2023). FloraBase (DBCA, 2024a) was used to determine the conservation status and known distribution of each taxon. The control status of introduced flora was sourced from the WoNS list and declared plants list (CISS, 2024; DPIRD, 2024).

Any significant flora taxa, including potential Threatened and Priority taxa, range extensions, and potential new taxa, were submitted to the WAH for verification and lodgement. Where relevant, Threatened and Priority Flora Report Forms (TPFRFs) were submitted to DBCA.

3.3.7 Statistical Analyses

3.3.7.1 Vegetation Type Validation

Multivariate analysis to validate vegetation types was undertaken using PRIMER version 7. A comparison of the similarity of floristic composition between flora sites based on species presence or absence was undertaken using the Bray-Curtis similarity index. Vegetation types were defined based on approximately 40-80% similarity and distinguished visually in a dendrogram cluster analysis. The analysis was undertaken on a data matrix comprising 80 vascular flora taxa and 54 flora sites. Quadrats and relevés were included in the analysis as comprehensive species presence or absence was recorded at both site types. Singletons (flora taxa recorded at only one site) were excluded from the analysis as they can result in bias due to the Bray-Curtis coefficient and grouping properties. Unidentified or partially identified flora taxa were removed based on their ambiguity; exceptions were made for taxa that could not be identified but were confirmed to be the same across multiple sites. Introduced taxa (with the exception of dominant species, primarily Buffel Grass, *Cenchrus ciliaris) were also excluded as their presence is typically associated with a disturbance rather than representative of a vegetation type.

3.3.7.2 Species Accumulation Curve

A species accumulation curve was plotted using Primer v7 to determine the adequacy of the survey. The treatments comprised Sobs (Mao Tao), which effectively smooths the curve of observed species by simulating an infinite number of randomisations of the sample order, and richness estimators Chao 1, Chao 2, Jacknife 1, Bootstrap, and Michaelis-Menton to predict the theoretical maximum number of species that could potentially be recorded. The species accumulation curve was calculated using systematic sampling data from flora sites and does not include opportunistic flora records. All identified flora taxa, including annual and perennial, within each flora site was used to generate the species accumulation curve. Unknown flora taxa that could not be identified to a species level was excluded.

3.4 Fauna

3.4.1 Habitat Assessment and Mapping

Habitat assessments were undertaken in representative areas of fauna habitat within the Survey Area to record habitat values. Where possible, at least one habitat assessment was recorded within each habitat type. Habitat assessment locations are shown in **Map 7.**

The following information was collected at each habitat assessment locations using a GPS-enabled handheld device:

- Site photo.
- Landform.
- Soil type and colour.
- Rock types, surface stone cover, and size classes.
- Key habitat and microhabitat features including leaf litter, logs, burrows, rocky outcrops, rock crevices, hollows, and water sources.
- Habitat quality, fire history, and evidence of disturbance.
- General description of vegetation structure.

Fauna habitat mapping was based on a combination of field observations, habitat assessment data, aerial imagery, and, if available, vegetation type mapping. Polygons were digitised using GIS software.

3.4.2 Camera Traps

A total of 49 motion sensitive camera traps were set up during the targeted survey. Site selection was based on suitable habitat features targeting the Northern Quoll. Cameras were baited with universal bait (rolled oats and peanut butter and sardines). **Table 7** shows the total camera trap survey effort, and camera trap locations are shown in **Map 7**.

Table 7: Camera trap survey effort

3.4.3 Acoustic Surveys

Autonomous recording units (ARUs) were used to passively record animal calls during the field survey.

3.4.3.1 Bats

Song Meter SM4BAT ultrasonic ARUs were used to target bats with a particular focus on the Pilbara Leaf-nosed Bat and Ghost Bat. SM4BAT ARUs were deployed in habitats likely to be used by significant bat species, such as water sources or rocky areas, for a minimum of four nights at each location. The number and time of significant bat species calls was documented, whereas non-significant bat species were simply recorded as present or absent per night at each location. **Table 8** shows the total SM4BAT ARU survey effort, and locations are shown in **Map 7**.

Table 8: SM4BAT ARU survey effort

Habitat	Site number	Trap nights
Outcrops and Breakaways	675.072189-BAT-1	9
Outcrops and Breakaways	675.072189-BAT-2	6
Low *Acacia stellaticeps* over Triodia Plains	675.072189-BAT-3	5
Outcrops and Breakaways	675.072189-BAT-4	4
Major Drainage	675.072189-BAT-5	6
	Total	**30**

3.4.3.2 Night Parrot

Song Meter SM4 ARUs were used to target Night Parrot (*Pezoporus occidentalis*). SM4 ARUs were deployed in habitats likely to be used by Night Parrot, such as water sources or long unburnt spinifex, for a minimum of six nights at each location. **Table 9** shows the total SM4 ARU survey effort, and locations are shown in **Map 7**.

Table 9: SM4 ARU survey effort

3.4.4 Opportunistic Observations

Opportunistic observations of fauna were recorded throughout the Survey Area, including primary evidence (direct sightings, calls) and secondary evidence (tracks, scats, diggings, remains).

3.4.5 Bilby Searches

Targeted Bilby searches were undertaken throughout the Survey Area in areas of suitable Bilby habitat and consisted of personnel conducting transect searches searching for evidence of Bilby activity, such as burrows, diggings, scats, and tracks. A total of 44 targeted Bilby searches were undertaken. **Table 10** shows the total survey effort for Bilby searches, and locations are shown in **Map 7**.

Table 10: Targeted Bilby search effort

Search Number	Habitat	Habitat Site Sheet	Search length (Kms)
Bilby Search 1	Low *Acacia stellaticeps* over Triodia Plains	675.072189-CAM-59	0.26

3.4.6 Identification and Taxonomy

Terrestrial vertebrate fauna taxa were identified in the field and released on site. Bat and bird calls were analysed by Robert Bullen from Bat Call WA.

Where there was doubt on a species name (through subsequent name changes or taxonomic reviews), an effort was made to determine the current scientific name for each taxon. Taxonomy and nomenclature in this report follows the Checklist of the Terrestrial Vertebrate Fauna of Western Australia (WAM, 2024) where relevant.

3.5 Limitations

Limitations and constraints of the flora, vegetation, and fauna survey are detailed below in **Table 11**.

Table 11: Limitations and constraints associated with the survey

Variable	Degree of limitation	Potential constraints on survey outcomes
Availability of data and information	None	Sufficient data and information, including regional and local contextual information, was available to complete the scope of the survey.
Competency and experience of the survey team	None	The survey was undertaken by a team with the following extensive experience undertaking similar scopes within the Pilbara bioregion. • Associate Ecologist Lukas Geidans – 4.5 years' experience • Zoologist Lewis Berry – 2.5 years' experience • Botanist Jack Hardie – 2.5 years' experience • Senior Botanist Grant Buller – 3 years' experience
The proportion of flora and fauna identified, recorded, or collected	None	Of the 172 flora taxa recorded, 19 specimens (11%), could not be identified to species level because they were sterile at the time of the survey. The unidentified flora specimens were not analogous to significant flora taxa. All of the fauna recorded during the field survey were identified on site.
Scope of the survey	None	The scope of the survey was limited to vascular plants and terrestrial vertebrate fauna. No further exclusions were made within these groups.
Adequacy of the survey intensity and proportion of survey achieved	None	A minimum of three flora sites were installed within most vegetation types, apart from two vegetation types which were restricted in distribution, and a minimum of two fauna habitat assessment were made within each habitat type. Additional survey effort may yield additional flora and fauna taxa, however,

Variable	Degree of limitation	Potential constraints on survey outcomes
		sufficient time and effort was allocated to the survey given the size and complexity of the Survey Area and the expected level of survey intensity.
Access problems	None	The different vegetation types and habitats within the Survey Area were sufficiently accessed by vehicle and on foot.
Timing, weather, and season	Partial	The recommended primary survey period Eremaean Botanical Province as per the EPA Technical Guidance occurs 6-8 weeks post wet season (March to June). The flora and vegetation survey was undertaken within the recommended primary survey period, however rainfall in the 3 and 12-month periods prior to the survey was well below average. The recommended primary periods for fauna surveys in the Pilbara region are: • Amphibians – immediately following rainfall • Birds – immediately following rainfall • Mammals – no preferred time • Reptiles – September to April The fauna survey was undertaken within the recommended primary survey period for all vertebrate species.
Disturbance that may have affected the results of survey	None	Areas of disturbance associated with weeds and livestock/pastoralism were present within the Survey Area but were not a limitation on the results of the survey.
Problems with data and analysis, including sampling biases	None	Survey effort for significant flora and fauna taxa was concentrated in preferred habitats. This may introduce a bias where the use of non-preferred habitat is underrepresented, however, this is not considered a limitation on the survey outcomes.

4.0 Results

4.1 Flora and Vegetation

4.1.1 Desktop Assessment

4.1.1.1 Database Searches

The database searches and literature review identified 33 significant flora taxa occurring within the Desktop Study Area, comprising:

- One Threatened taxa
- Eight Priority 1 taxa
- Two Priority 2 taxa
- 20 Priority 3 taxa
- Two Priority 4 taxa

Key findings of the literature review and database search results are summarised in **Appendix B** and presented in **Map 8**.

Three PECs were identified within the Desktop Study Area:

- Eighty Mile Land System (Priority 3), approximately 19 km north of the Survey Area.
- Gregory Land System (Priority 3), approximately 49 km south-south-west of the Survey Area.
- Horseflat Land System of the Roebourne Plains (Priority 3) approximately 75 km south west of the Survey Area.

The PECs identified by database searches are presented in **Map 8**.

4.1.1.2 Likelihood of Occurrence

The pre-survey likelihood of occurrence assessment identified that of the 33 significant flora species identified by the desktop assessment:

- None had previously been recorded within the Survey Area
- 11 were considered to have a high likelihood of occurrence
- None were considered to have a medium likelihood of occurrence
- 22 were considered to have a low likelihood of occurrence.

Following the survey, the likelihood of occurrence assessment identified that:

- Two taxa were recorded within the Survey Area
- Two taxa were considered to have a high likelihood of occurrence
- Six taxa were considered to have a medium likelihood of occurrence
- 23 taxa were considered to have a low likelihood of occurrence.

The likelihood of occurrence assessment is provided in **Appendix C**.

4.1.2 Field Survey

4.1.2.1 Floristic Composition

The survey recorded a total of 172 taxa from 94 genera across 40 families (**Appendix D**). The dominant families were Fabaceae (45 species), Poaceae (19 species) and Malvaceae (14 species). The dominant genera were *Acacia* (18 species), *Corymbia* and *Ptilotus* (6 species each). Of the 172 taxa recorded, 15 were identified to genus and two were identified to family, however these specimens are unlikely to represent conservation significant flora.

4.1.2.2 Significant Flora

Threatened and Priority Flora Recorded Within the Survey Area

No Threatened flora species pursuant to the Environment Protection and Biodiversity Conservation (EPBC) Act 1999 and/or gazetted as Threatened pursuant to the Biodiversity Conservation (BC) Act 2016 were recorded during the survey.

Two DBCA-listed Priority species, *Gymnanthera cunninghamii* (P3) and *Tephrosia rosea* subsp. Port Hedland (A.S. George 1114) (P1), were recorded within the Survey Area (Map 9). Six individuals of *Gymnanthera cunninghamii* (Plate 1) was recorded opportunistically in Devil Creek (vegetation type MaEc), while two individuals of *Tephrosia rosea subsp*. Port Hedland (A.S. George 1114) (Plate 2) were recorded opportunistically within vegetation type AsTe adjacent to Great Northern Highway at the western end of the survey area.

Threatened and Priority Flora Report Forms have been submitted to DBCA and are provided in **Appendix E**.

Plate 1. *Gymnathera cunninghamii* (P3) (Source: SLR Consulting).

Plate 2: *Tephrosia rosea* subsp. Port Hedland (A.S. George 1114) (Source: SLR Consulting)

Significant Flora Potentially Occurring Within the Survey Area

No significant flora taxa have been recorded within the Survey Area during previous surveys.

4.1.3 Introduced Flora

A total of eight introduced taxa were recorded within the Survey Area, representing 4.7% of the total taxa recorded (**Table 12; Map 10**). None are listed as WoNS. One taxon (**Calotropis procera*) is listed as a Declared Pest under the BAM Act, of which approximately 144 individuals were recorded opportunistically, and another four individuals within flora sites.

One individual of **Azadirachta indica* (Neem Tree) was recorded opportunistically in the King Edward River drainage; this record was determined to be a range extension as its current distribution according to Florabase is within the Kimberley region (DBCA, 2024a). The specimen collected was vouchered at the request of Mike Hislop from WAH (pers. com. M Hislop, 2024). The remaining six weed species recorded are commonly found throughout the Pilbara.

Table 12: Introduced Flora Taxa Recorded within the Survey Area

Taxon	Common name	Status under BAM Act	WoNS
**Aerva javanica*	Kapok	Permitted – s11	No
**Azadirachta indica*	Neem tree	Permitted – s11	No
**Calotropis procera*	Calotrope	Declared Pest - s22(2)	No
**Cenchrus ciliaris*	Buffel grass	Permitted – s11	No
**Indigofera oblongifolia*		Permitted – s11	No
**Malvastrum americanum*	Spiked Malvastrum	Permitted – s11	No
**Passiflora foetida*	Stinking Passion Flower	Permitted – s11	No
**Vachellia farnesiana*	Mimosa Bush	Permitted – s11	No

4.1.4 Unconfirmed Flora

Nineteen specimens (11% of the taxa recorded) could not be identified to species level because the taxa were too sterile and/or in poor condition at the time of the survey (Flora Inventory, **Appendix D**). Of these specimens, three were identified to family level, 15 were identified to genus level, and one was tentatively identified to species level. None of the unconfirmed flora taxa were analogous to significant flora taxa identified by the desktop assessment and may represent duplicates of taxa that were confirmed within the Survey Area. One of the three taxa identified to Family level (i.e. Violaceae) was only tentatively assigned a genus (i.e. ?*Afrohybanthus*) (refer to Discussion, Section **5.1.2.1**).

4.1.5 Vegetation Types

Fourteen vegetation types were described and mapped across five broad landforms within the Survey Area (**Table 13**; **Map 9**).

Detailed site sheets for each quadrat are provided in **Appendix F**.

Table 13: Vegetation types recorded within the Survey Area

Vegetation type and description*	Local landform	Total area, percentage of Survey Area	Sites	Vegetation condition	Representative photograph
Vegetation Type Code: **AiTe:** *Triodia epactia* low hummock grassland	Ironstone hilltops and ridges	30 ha, 0.29%	AR10, AR13, AR45	Very Good	
Vegetation Type Code: **AoTe:** *Acacia orthocarpa* tall open shrubland over *Triodia epactia* low open hummock grassland	Granite and quartz outcroppings	53 ha, 0.51%	AR05, AR36, AR38, AR40	Very Good	

Vegetation type and description*	Local landform	Total area, percentage of Survey Area	Sites	Vegetation condition	Representative photograph

Vegetation Type Code: **MaEc:** *Eucalyptus camaldulensis* subsp. *refulgens* (*E.victrix*), *Melaleuca argentea* low sparse woodland over tall sparse shrubs *Acacia trachycarpa*, *M. glomerata* over *Eulalia aurea* low sparse tussock grasses and *Triodia epactia* low sparse hummock grasses	Major drainages	165.7 ha, 1.6%	AR28, AR39, AR41, AR47	Good	

Vegetation type and description*	Local landform	Total area, percentage of Survey Area	Sites	Vegetation condition	Representative photograph
Vegetation Type Code: **Sh**: *Sclerolaena hostilis* low sparse forbland	Low lying colluvial flats,	9.6 ha, 0.09%	AR11	Degraded	
Vegetation Type Code: **TsTe:** *Triodia secunda* and *T. epactia* low hummock grassland	Flats, floodplain	848.4 ha, 8.19%	AR01, AR19, AR24, AR43, AR51	Very Good	
*Brackets indicate species that may or may not be present, but were observed as dominant at some of the sites that make up the vegetation type

4.1.6 Vegetation Condition

Vegetation condition within the Survey Area ranged from Degraded to Very Good, with the majority (95.2%) being in Very Good condition (**Table 14**; **Map 10**).

The remainder of the Survey Area comprised previously cleared areas (i.e. for roads, tracks, pastoralism infrastructure) and were not assigned a vegetation condition (206.3 ha / 2 %).

Evidence of disturbance included historical clearing for access tracks, cattle grazing, trampling and scats, weeds, and frequent burning.

Table 14: Summary of Vegetation Condition within the Survey Area

Vegetation Condition	Area (ha)	Percentage of Survey Area (%)
Degraded	52.1	0.5
Good	232.4	2.2
Poor	3.3	0.03
Very Good	9868.9	95.2

4.1.7 Significant Vegetation

4.1.7.1 Threatened and Priority Ecological Communities

None of the vegetation types within the Survey Area were considered analogous to TECs or PECs.

4.1.8 Groundwater Dependent Ecosystems

One vegetation type, MaEc, is likely to represent groundwater dependent ecosystems (GDE) associated with some of the major drainages intersecting the survey area (i.e. King Edward River, Turner River and Devil Creek). This vegetation type supports known phreatophytic tree species such as *Melaleuca argentea* and *Eucalyptus camaldulensis* subsp. *refulgens*, which are reliant on access to the groundwater table.

4.1.9 Statistical Analysis

4.1.9.1 Floristics

Data was modified in accordance with the methodology in Section **3.3.7.1.** Selected inputs and outputs of the floristic analysis are presented in **Appendix G**. The following observations were made from the floristic analysis and the dendrogram output (**Figure 2**):

- Acacia dominated vegetation types on plains (At, AspTe, AoTe, AsTe and FspTe) grouped broadly together; these groups largely represented the Acacia plains which dominated the majority of the Survey Area (approximately 83%). While FspTe was included in this grouping, this was largely based on the shared presence of common Acacia shrubs which exist across a range of habitats and landforms (e.g. *A. inaequilatera* and *A. ancistrocarpa*). Vegetation mapping from the flora survey, however, determined the FspTe vegetation type to be separate based on the presence of *Ficus brachypoda* which is often associated with these landforms (i.e. granite outcroppings) and less so on the plains. These granite outcroppings also often represent a different suite of species to the surrounding plains, despite often sharing some common Acacias.

- The major drainage sites (MaEc) were grouped together with a shared similarity of 40 %, sharing dominant drainage/GDE-associated species such as *Melaleuca argentea*, *M. glomerata*, *Eucalyptus camaldulensis* subsp. *refulgens*, *Acacia trachycarpa*, *Cyperus vaginata* and *Eulalia aurea*. This grouping was generally consistent with mapping from the field survey.
- Low lying flats and floodplain sites associated with vegetation type TsTe grouped together, which was consistent with mapping from the survey. TsTe was often in close proximity to the widespread Acacia plains, and the analysis also grouped some AspTe sites with the four TsTe sites; this was due to some crossover of common Acacia species (e.g. *A. ancistrocarpa, A. acradenia, A. bivenosa, A. colei, A. inaequilatera*).
- One of the TsTe sites, AR19, grouped separately from the others due to the absence of *Triodia epactia*, however it was retained in TsTe by the survey vegetation mapping due to the dominant presence of *T. secunda*.
- Sites within the FspAh and AiTe vegetation types were associated with the ironstone ridge, hilltop and slopes landforms, and were generally grouped together by the analysis based on shared presence of Ficus spp. The ironstone ridge sites (FspAh) were separated from the nearby hilltop sites (AiTe) by the survey vegetation mapping due to the absence of *Ficus* spp. and *Atalaya hemiglauca* in these hilltop sites, however the close proximity of these landforms still resulted in the crossover of common species (e.g. *Acacia inaequilatera*) and therefore the floristic grouping of these sites by the analysis.
- Sites within the vegetation types EvAcTe and CcAcTe were grouped together, as well as some sites from EvEa. These vegetation types were associated with low lying plains, minor floodplains and minor drainages, and shared some similarities, particularly a low sparse overstorey of *Eucalyptus victrix* and a mid-storey of tall sparse to open shrubland of *Acacia colei* var. *colei*. EvEa was associated with a different landform (minor drainages) to EvAcTe and CcAcTe however was included in this grouping by the analysis due to presence of *Eulalia aurea* and *Eucalyptus victrix*; *E. victrix* is a facultative phreatophyte which often grows in minor drainages but also is common across low lying plains and minor floodplains, while *E. aurea* often inhabits watercourses, damp areas and floodplains though is commonly found across a range of habitats.

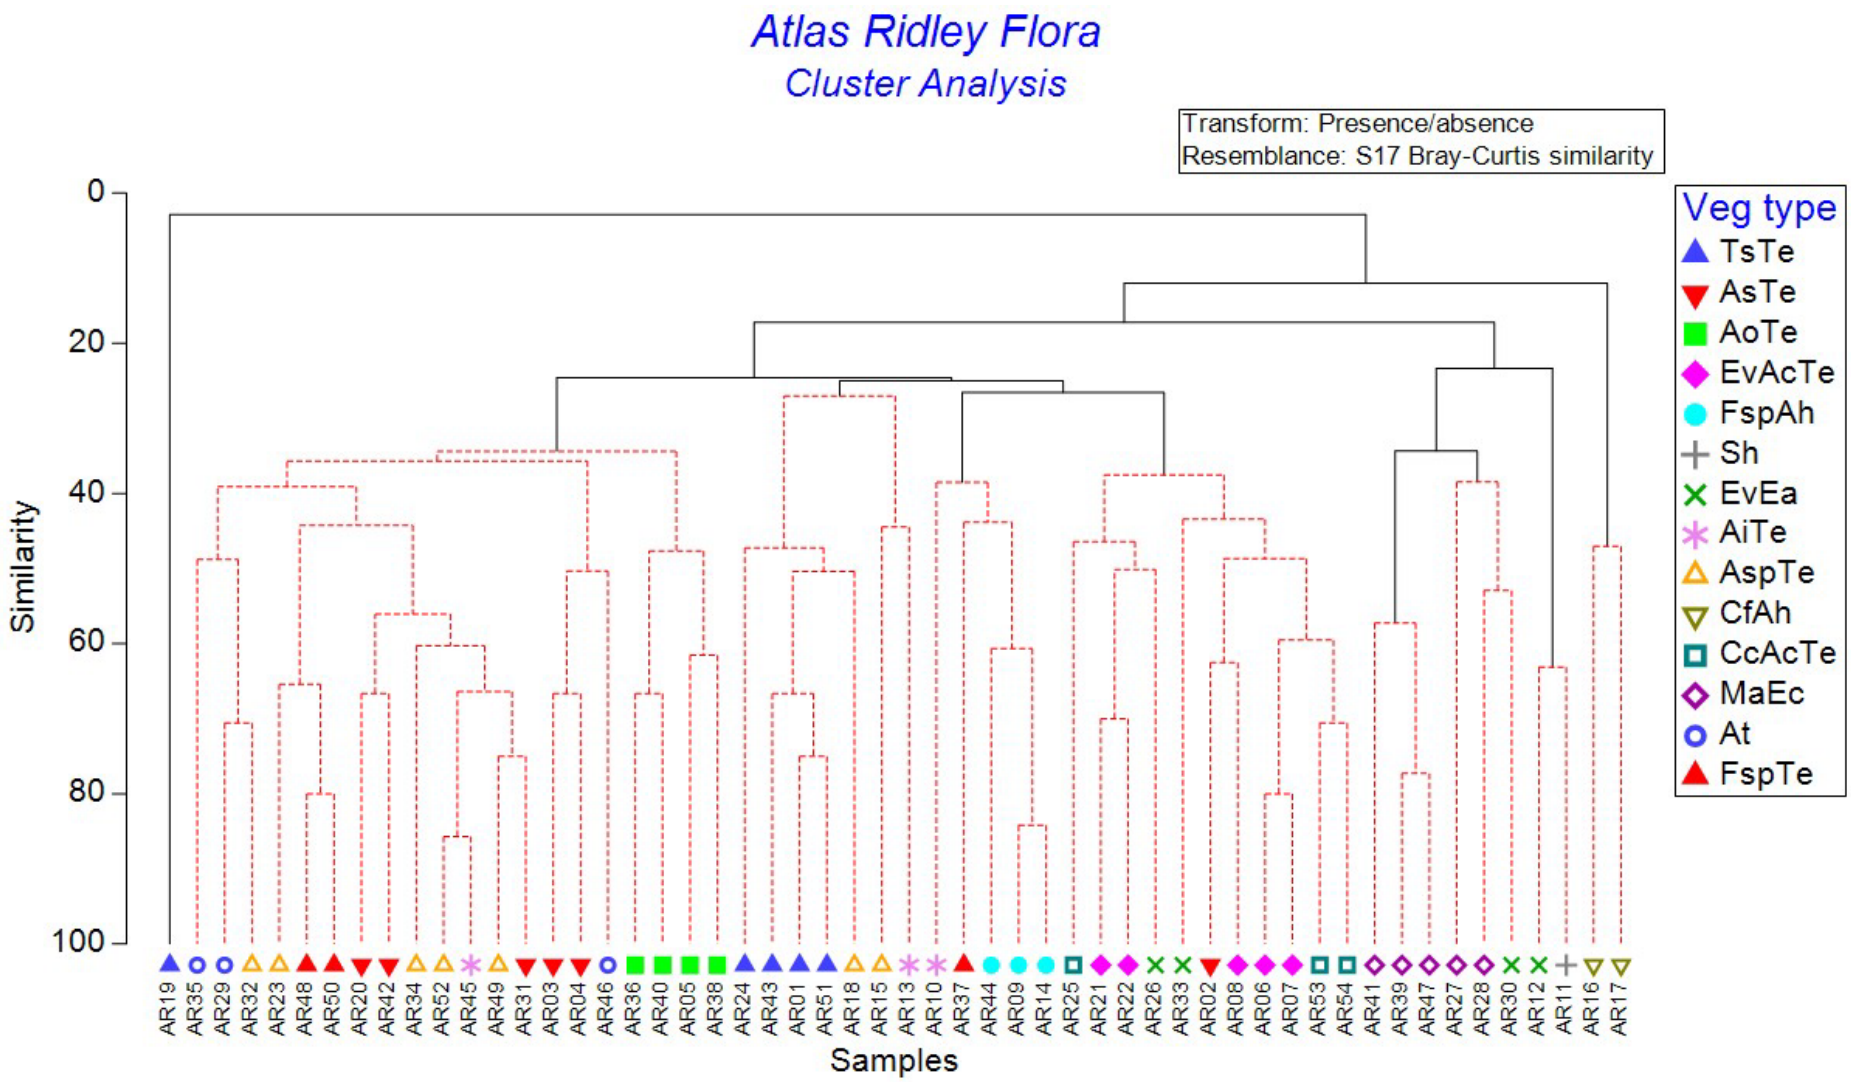

Figure 2: Cluster analysis (dendrogram) showing floristic groupings of sites for each vegetation type.

4.1.9.2 Flora Species Accumulation

Analysis of systematic flora data for the Survey Area Analysis of systematic flora data for the Survey Area produced a Sobs curve that is approaching an asymptotic plateau (**Figure 3**). All richness estimators were at or greater than the Sobs curve, indicating that the observed species richness was lower than, or equal to, that predicted by the analysis. The observed species richness for the Survey Area was 121, whereas estimated species richness ranged from 121 (Chao 1 and 2, Jacknife 1) to 157 (MM), which suggests that approximately 77 to 100% of the theoretical maximum number of flora species was recorded during the field survey (**Table 15**).

The data used to produce the species accumulation curve was conservative because opportunistic species (which are not associated with a site), and unconfirmed flora were not included. With opportunistic and unconfirmed flora included, the number of flora taxa recorded during the survey was 153, which is 98.0% of the highest expected species richness, and 126.4% of the lowest expected species richness.

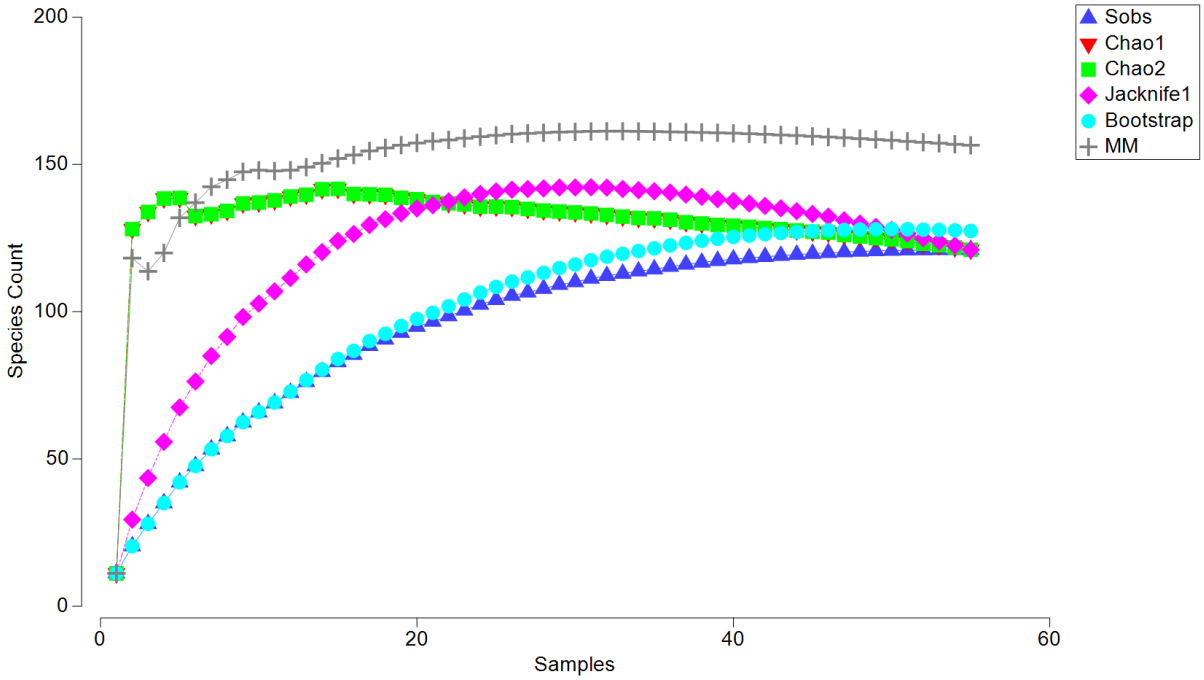

Figure 3: Flora Species Accumulation Curve

Table 15: Flora species richness estimators

Treatment	Estimated species richness	Observed species richness as a proportion of estimated species richness
Chao 1	121	100.00
Chao 2	121	100.00
Jacknife 1	121	100.00
Bootstrap	127.40	94.98
Michaelis-Menton	156.49	77.32

4.2 Fauna

4.2.1 Desktop Assessment

The database searches and literature review identified 426 terrestrial vertebrate fauna taxa occurring within the Desktop Study Area, comprising:

- 14 amphibians, of which none are significant.
- 244 birds, of which 62 are significant.
- 56 mammals, of which 11 are significant.
- 112 reptiles, of which three are significant.

Key findings of the literature review are summarised in **Appendix B**, a complete list of fauna taxa returned by the database search results is presented in **Appendix H** and displayed in **Map 11**.

4.2.2 Fauna Habitat

Nine fauna habitats (excluding cleared areas) were identified and mapped within the Survey Area. Fauna habitats are presented in **Map 12**, described below in **Table 16**, and site sheets for each habitat assessment are provided in **Appendix I**. Small discrepancies in fauna habitat extents (i.e., not adding up to the exact area extent of the Survey Area) are due to rounding.

Table 16: Fauna habitats recorded within the Survey Area

Fauna habitat	Total area, percentage of Survey Area	Habitat description	Representative photograph
Closed Acacia Shrubland	15.01 ha, 0.14%	Flat plains with red sandy substrate. Vegetation consists of open *Corymbia* and *Eucalyptus* woodland over *Eucalyptus* and *Acacia* open shrubland midstory over low *Triodia* hummock grassland. Microhabitats include *Triodia* hummocks and leaf litter. This habitat contained disturbances caused by vehicle tracks.	
Low *Acacia stellaticeps* over Triodia	3,071.26 ha, 29.64%	Flat plains with brown-orange clay, loam and sandy substrate. Vegetation consists of low, isolated clumps of *Acacia stellaticeps* over low *Triodia epactia* open hummock grassland. Microhabitats include *Triodia* hummocks, leaf litter and woody debris were observed. This habitat contained disturbances caused by vehicle tracks and overgrazing. The significant Pilbara Leaf-nosed Bat was recorded within this habitat. Previous surveys have recorded the Bilby, Oriental Pratincole, and the Brush-tailed Mulgara within this habitat type.	

Fauna habitat	Total area, percentage of Survey Area	Habitat description	Representative photograph
Major Drainage	165.69 ha, 1.60%	Flat plains with red-orange sandy substrate. Vegetation consists of open eucalypt woodland over sparse acacia midstory and open *Triodia* hummock grassland. Microhabitats include *Triodia* hummocks, leaf litter, peeling bark, woody debris, and burrows. Tree hollows, log hollows and logs over 10cm were also observed. This habitat contained disturbances caused by vehicle tracks, overgrazing and weeds. The significant Grey Falcon and Barn Swallow may utilise the eucalypt trees within this habitat for nesting. The significant Ghost Bat and Osprey may utilise this habitat for foraging.	
Minor Drainage	24.12 ha, 0.23%	Flat plains with red sandy substrate. Vegetation consists of open *Eucalyptus* woodland over *Eucalyptus* and *Acacia* open shrubland midstory over low *Triodia* hummock grassland. Microhabitats include *Triodia* hummocks, leaf litter, peeling bark and woody debris. This habitat contained disturbances caused by vehicle tracks. The significant Grey Falcon and Barn Swallow may utilise the eucalypt trees within this habitat for nesting. The significant Ghost Bat and Osprey may utilise this habitat for foraging.	

Fauna habitat	Total area, percentage of Survey Area	Habitat description	Representative photograph
Mixed Acacia Shrubs and Triodia Plains	5,501.32 ha, 53.09%	Flat plains with red-orange sandy and clay-loam substrate. Vegetation consists of open *Eucalyptus* woodland over *Acacia* open shrubland midstory with *Triodia* hummock grassland. Microhabitats include *Triodia* hummocks and leaf litter. This habitat contained disturbances caused by vehicle tracks and overgrazing. The significant Western Pebble-mound Mouse was recorded within this habitat. The Marsh Sandpiper, Red-necked Phalarope, and the Sanderling have been previously recorded within this habitat type. The significant Common Greenshank, Little Curlew, Oriental Plover, and the Glossy Ibis may utilise this habitat after significant rainfall event.	
Open Eucalypt Woodland	429.90 ha, 4.15%	Flat plains with red sandy substrate. Vegetation consists of open *Corymbia* and *Eucalyptus* woodland over *Eucalyptus* and *Acacia* open shrubland midstory over low *Triodia* hummock grassland. Microhabitats include *Triodia* hummocks and leaf litter. This habitat contained disturbances caused by vehicle tracks. The significant Peregrine Falcon may utilise this habitat for nesting and hunting.	
Fauna habitat	Total area, percentage of Survey Area	Habitat description	Representative photograph
Outcrops and Breakaways	43.56 ha, 0.42%	Sloped granite, ironstone and quartz ridges and outcrops with red-brown sandy-clay substrate. Vegetation consists of open acacia shrubland midstory over sparse and open *Triodia* hummock grassland. Microhabitats include Exfoliating rock, rock crevices, *Triodia* hummocks, leaf litter, peeling bark and woody debris. The significant Pilbara Leaf-nosed Bat and Western Pebble-mound Mouse were recorded within this habitat. The significant Northern Quoll has also been recorded by previous surveys within this habitat type. The significant Pilbara Olive Python may utilise this habitat for dispersal.	
Sparse Triodia Plains	858.02 ha, 8.28%	Open rocky granite plains with red sandy-pebble substrate. Vegetation consists of sparse acacia shrubland midstory over open hummock grassland. Microhabitats include *Triodia* hummocks and leaf litter. This habitat contained disturbances caused by vehicle tracks and overgrazing. The significant Western Pebble-mound Mouse was recorded within this habitat. The significant Common Greenshank, Little Curlew, Oriental Plover, and the Glossy Ibis may utilise this habitat after significant rainfall event. The Pilbara Grasswren and the Short-tailed Mouse may also utilise this habitat for foraging and shelter.	

Fauna habitat	Total area, percentage of Survey Area	Habitat description	Representative photograph
Stony Hills	47.82 ha, 0.46%	Undulating granite and quartz plains with red sandy substrate. Vegetation consists of sparse *Acacia* shrubland midstory over sparse *Triodia* hummock grassland. Microhabitats include *Triodia* hummocks and termite mounds. This habitat contained disturbances caused by vehicle tracks. The Pilbara Grasswren and the Short-tailed Mouse may also utilise this habitat for foraging and shelter.	
Cleared	206.26 ha, 1.99%	Cleared land for existing tracks/roads. Low/negligible fauna habitat value.	
Total	10,363 ha		

4.2.3 Fauna Records

The fauna survey recorded a total of 63 fauna taxa from 34 families. The fauna diversity within each habitat type is summarised in **Table 17** and a full inventory of fauna taxa recorded during the field survey is provided in **Appendix J**.

Table 17: Fauna diversity by habitat type

Fauna habitat	Birds	Mammals	Reptiles	Total
Closed Acacia Shrubland	0	0	0	0
Low *Acacia stellaticeps* over Triodia	20	10*	3	33*
Major Drainage	10	7	5	22
Minor Drainage	5	1	2	8
Mixed Acacia Shrubs and Triodia Plains	15	3*	10	28*
Open Eucalypt Woodland	8	2	3	13
Outcrops and Breakaways	4	12*	5	21*
Sparse Triodia Plains	9	1	0	10
Stony Hills	1	2*	0	3*
Cleared	7	0	1	8

*Contains significant fauna

Birds

A total of 33 native birds from 20 families were recorded within the Survey Area. The most abundant bird taxa were the Australian Zebra Finch (*Taeniopygia castanotis*), Spinifex Pigon (*Geophaps plumifera*), and Crested Pigon (*Ocyphaps lophotes*). The most diverse bird families were Alcedinidae (Four taxa), and Falconidae (three taxa), and Cacatuidae (three taxa).

No significant birds (see **Section 4.2.4.1**) and one introduced bird were recorded.

Mammals

A total of 14 native mammals from nine families were recorded within the Survey Area, comprising four non-volant (non-flying) mammals and six volant mammals (bats). The most abundant mammal taxa were the Gould's Wattled Bat (*Chalinolobus gouldii*), Sheath-tailed Bat (*Taphozous spp*), Greater Northern Free-tailed Bat (*Chaerephon jobensis*) and Finlayson's Cave Bat (*Vespadelus finlaysoni*). The most diverse mammal families were Vespertilionidae (three taxa) and Macropodidae (two taxa).

Two significant mammals (see **Section 4.2.4.1**) and two introduced mammals were recorded.

Reptiles

A total of 16 native reptiles from five families were recorded within the Survey Area. The most abundant reptile taxa were the Rock Ctenotus (*Ctenotus saxatilis*), Western Ring-tailed Dragon (*Ctenophorus caudicinctus*), and Spiny-tailed Goanna (*Varanus acanthurus*). The most diverse reptile families were Scincidae (five taxa), Agamidae (three taxa), and Varanidae (three taxa).

No significant reptiles (see **Section 4.2.4.1**) and no introduced reptiles were recorded.

Amphibians

No amphibians were recorded within the Survey Area

4.2.4 Significant Fauna

4.2.4.1 Recorded within the Survey Area during the current survey

Two significant fauna taxa were recorded within the Survey Area:

- Pilbara Leaf-nosed Bat (*Rhinonicteris aurantia*) (Pilbara form), listed as Vulnerable under the BC Act and EPBC Act, was recorded seven times during the field survey. all individuals were recorded by ultrasonic ARUs within Outcrops and Breakaways (-20.2906, 119.1062) and Low *Acacia stellaticeps* over Triodia adjacent to Outcrops and Breakaways (-20.3417, 119.0783) (**Map 12**).
- Western Pebble-mound Mouse (*Pseudomys chapmani*), listed as Priority 4 by DBCA, was recorded six times during the field survey. All individuals were recorded by residual mounds within Stony Hills (-20.4059, 118.9593; -204061, 118.9596; -20.4090, 118.9611), Outcrops and Breakaways (-20.4190, 118.9164; -20.3421, 118.0801), and Mixed Acacia Shrubs and Triodia Plains adjacent to Outcrops and Breakaways (-20.4196, 118.9155) (**Map 12**).

4.2.4.2 Previously recorded within the Survey Area

Seven significant fauna taxa have been recorded within the Survey Area in recent years but were not recorded during the current survey:

- Northern Quoll (*Dasyurus hallucatus*), listed as Endangered under the BC Act and EPBC Act.
- Bilby (*Macrotis lagotis*), listed as Vulnerable under the BC Act and EPBC Act.
- Oriental Pratincole (*Glareola maldivarum*), listed as Migratory under the BC Act and EPBC Act, and Marine under the EPBC Act.
- Marsh Sandpiper (*Tringa stagnatilis*), listed as Migratory under the BC Act and EPBC Act, and Marine under the EPBC Act.
- Red-necked Phalarope (*Phalaropus lobatus*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Sanderling (*Calidris alba*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Brush-tailed Mulgara (*Dasycercus blythi*), listed as Priority 4 by DBCA.

4.2.4.3 High likelihood of occurrence within the Survey Area

Nine significant fauna taxa were assessed as having a high likelihood of occurring within the Survey Area:

- Grey Falcon (*Falco hypoleucos*), listed as Vulnerable under the BC Act and EPBC Act.
- Ghost Bat (*Macroderma gigas*), listed as Vulnerable under the BC Act and EPBC Act.
- Pilbara Olive Python (*Liasis olivaceus barroni*), listed as Vulnerable under the BC Act and EPBC Act.

- Common Greenshank (*Tringa nebularia*), listed as Migratory under the BC Act, and Endangered, Migratory and Marine under the EPBC Act.
- Barn Swallow (*Hirundo rustica*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Little Curlew (*Numenius minutus*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Oriental Plover (*Charadrius veredus*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Osprey (*Pandion haliaetus*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Peregrine Falcon (*Falco peregrinus*), listed as Other Specially protected species under the BC Act.

4.2.4.4 Medium likelihood of occurrence within the Survey Area

A total of 25 significant fauna taxa were assessed as having a medium likelihood of occurring within the Survey Area, including:

- Glossy Ibis (*Plegadis falcinellus*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Pacific Swift/Fork-tailed Swift (*Apus pacificus*), listed as Migratory under the BC Act, and Migratory and Marine under the EPBC Act.
- Pilbara Grasswren (*Amytornis whitei whitei*), listed as P4 (as *A. striatus striatus*) by DBCA.
- Short-tailed Mouse (*Leggadina lakedownensis*), listed as Priority 4 by DBCA.

A further 21 shorebird species were also assessed as having a medium likelihood of occurring within the Survey Area (**Appendix K**). These species will be discussed as a group due to the similarities of their habitat requirement within the Survey Area.

A total of 33 significant fauna taxa were assessed as having a low likelihood of occurring within the Survey Area. The complete results of the significant fauna likelihood of occurrence assessment including justification for the assessment outcome for each taxon is provided in **Appendix K**.

5.0 Discussion

5.1 Flora and Vegetation

5.1.1 Floristic Composition

The suite of flora taxa recorded during the survey is considered typical for the respective areas (Beard 1976) and aligns with the database search results obtained.

Rainfall in the three month and 12-month periods prior to the survey was well below average. This likely resulted in a lower than expected floristic diversity when considering other surveys undertaken in the region and the timing of the survey undertaken. The lack of rainfall also likely contributed to several small herbs and grasses that could not be identified to species level due the poor and/or sterile nature of these specimens. Had rainfall totals in the 3 and 12 months prior to the survey been closer to the long-term average for these periods, the survey results may have shown fewer sterile species and a higher floristic diversity, including more annuals and ephemerals.

5.1.2 Significant Flora

The two DBCA-listed Priority species recorded, *Gymnanthera cunninghamii* (P3) and *Tephrosia rosea subsp*. Port Hedland (A.S. George 1114) (P1), were each determined by the pre-survey desktop assessment to be of high likelihood of occurrence.

Gymnanthera cunninghamii is an erect shrub that grows from 1 to 2 metres high with cream-yellow-green flowers from January to December (Department of Biodiversity Conservation and Attractions, 2020). The species grows in sandy soils (Department of Biodiversity Conservation and Attractions, 2023) and often favours creek beds, river systems and major drainage lines.

Tephrosia rosea subsp. Port Hedland (A.S. George 1114) is an erect, spindly shrub that has been recorded from only a few locations in the Pilbara, mostly on pale red-yellow-brown sand on sand plains (Western Australian Herbarium, 2023).

Focused Vision (2023) recorded one individual of *Tephrosia rosea* subsp. Port Hedland (A.S. George 1114) within their 2023 survey, located approximately 6.5 km to the north of the far western end of the current survey area.

5.1.2.1 Other Species of Interest

One flora collection from the survey, ?*Afrohybanthus*, could not be positively identified to Genus level, however it was noted by WAH taxonomist Mike Hislop as an interesting collection with some vegetative characters shared between the *Afrohybanthus* and *Pigea* genera (both in the Violaceae family). While this specimen has a generally similar vegetative morphology to a WAH specimen referred to as *A*. aff. *aurantiacus* from the PH area (Loudon, B.; Henshaw, N. BLNH-036), it differs from the WAH specimen which has hairy branchlets. A better specimen collected during a season with higher rainfall may yield a positive identification.

5.1.3 Vegetation Types and Condition

Mapping reliability ranged from very high, in areas where flora sites and mapping notes were completed within intact vegetation, to moderate in areas that were not traversed. The majority of the survey area (approximately 86.5%) comprised plains consisting of *Acacia stellaticeps* and mixed *Acacia* spp. with isolated patches of *Eucalyptus victrix* and *Corymbia* spp. woodland. Some areas, particularly in the AsTe vegetation type, were heavily fire affected, however sufficient intact vegetation remained to reliably inform vegetation mapping.

Five broad landforms – ironstone hilltops and ridges, outcroppings, plains, low lying floodplains/flats/minor drainages and major drainages – were recorded within the Survey Area.

Based on examining similarities in vegetation descriptions, vegetation within the survey area was largely representative of existing broad scale vegetation and soil and land system mapping for the area (Beard, 1976, Shepherd et al., 2002).

The vegetation throughout the majority of the survey area was in 'Very Good' condition. With many pastoral stations situated in the Port Hedland region, disturbances from livestock and weeds in this region are widespread; as such, these disturbances automatically downgrades any vegetation condition below that of 'Excellent' (EPA, 2016c). Areas in Good, Poor or Degraded condition were often affected by the presence of more aggressive and/or declared pest species of weeds such as **Cenchrus ciliaris* and **Calotropis procera* (DP). These areas were often associated with drainages and floodplains frequented by livestock, which often act as vectors for the spread of these weeds, as well as other weeds such as **Vachellia farnesiana* and **Malvastrum americanum*. Areas that had been cleared of vegetation for roads, tracks and infrastructure were not assigned a vegetation condition.

5.1.4 Significant Vegetation

5.1.4.1 Groundwater Dependent Ecosystems

Vegetation type MaEc is likely to be representative of groundwater dependent ecosystems. This is indicated by the presence of known phreatophytic vegetation, specifically *Melaleuca argentea* and *Eucalyptus camaldulensis* subsp. *refulgens. Melaleuca argentea* is an obligate phreatophyte and is almost exclusively dependent on groundwater for its water requirements while *Eucalyptus camaldulensis* subsp. *refulgens* is a facultative phreatophyte and utilises groundwater as well as water from other sources (Rio Tinto, 2017).

Whilst the MaEc vegetation type comprised a small proportion of the Survey Area (1.6%), it was mapped in three different locations, each one traversing the full width of the Survey Area corridor (see **Map 9**). These locations correspond to the three major drainages (from west to east): Turner River, King Edward River and Devil Creek.

Previous surveys conducted by Focused Vision in 2023 mapped the King Edward and Devil Creek as potentially representative of GDV due to a dominant overstorey of facultative phreatophytes *Eucalyptus camaldulensis* subsp. *refulgens* and *Eucalyptus victrix*.

5.1.5 Survey Adequacy

The flora and vegetation survey were conducted in accordance with the scope of works, and appropriate for a detailed flora and vegetation survey in the Pilbara. Fifty-four flora sites were sampled across the Survey Area, comprising 26 quadrats and 28 relevés. The inventory of vascular flora and records of significant and weed species was compiled using flora site data and opportunistic observations made during traverses between sites and targeted searches of habitat likely to support significant flora (e.g. drainages).

A minimum of three flora sites were sampled in each vegetation type, except for vegetation types Sh and CfAh which were each too restricted in distribution to accommodate three sites. Vegetation type FspAh comprised the smallest proportion of the total survey area (0.02%), however the ironstone ridges with which the vegetation type was associated with were distributed adequately enough to incorporate three flora sites.

When a curve approaches an asymptote, it indicates sampling effort has been sufficient to adequately collect the species comprising the floral assemblage at the locations sampled. The value at which the curve asymptotes can also be used as an approximate measure of the total size of the species complement at that location.

The species accumulation curve and the richness estimators approached asymptote and plateaued, indicating that additional surveys would be unlikely to record many additional vascular flora taxa. This in turn is indicative of the paucity of flora taxa throughout the Atlas Ridley Survey Area as a result of very dry conditions in the 3- and 12-month periods prior to the survey. The presence of ephemeral and annual herbs was very low, and even perennial grasses such as *Triodia* spp., *Eulalia aurea*, *Eragrostis* spp. and **Cenchrus ciliaris* (Buffel grass) were often observed either dead or sterile.

5.1.6 Regional Representation

According to the EPA (2000), the threshold level below which species loss appears to accelerate exponentially at an ecosystem level is regarded as being 30% of the pre-clearing extent of the vegetation type. Proposals that would affect a vegetation association with 30% or less of its pre-clearing extent remaining are likely to be formally assessed by the EPA (2006).

Each of the four Abydos Plain vegetation associations within the Survey Area are above the threshold level of 30% of the pre-clearing extent set by the EPA for protecting biological diversity.

5.2 Fauna

5.2.1 Fauna habitat

The nine broad fauna habitats (excluding cleared areas) identified within the Survey Area are typical of the Pilbara bioregion and consistent with habitats identified by previous studies in the region (Appendix B). At least one habitat assessment was conducted within each habitat type. Multiple assessments were conducted within the fauna habitats with the highest value to significant fauna (e.g. Outcrops and Breakaways) and overall fauna assemblages (e.g. Low *Acacia stellaticeps* over Triodia). Nearly all identified fauna habitats extend outside the Survey Area to form larger ecosystems. However, there is one pocket of Stony Hills and Closed Acacia Shrubland habitats, and a series of Outcrops and Breakaways habitat contained entirely within the Survey Area which lack connectivity to similar habitats.

Four fauna habitats: Outcrops and Breakaways; Stony Hills; Low *Acacia stellaticeps* over Triodia and Mixed Acacia Shrubs; and Triodia Plains habitats, represent the highest value to overall fauna assemblages and the highest value to significant fauna.

The Outcrops and Breakaways habitats are of value to significant fauna species such as Northern Quoll, Pilbara Leaf-nosed Bat, and Western Pebble-mound Mouse. The caves and rock crevices found throughout the habitats provide roosting, denning, and refuge habitat. The hills and valleys within these habitats may also occasionally flood, providing a temporary water source for fauna species.

The Stony Hill habitat is of value to significant species such as the Western Pebble-mound Mouse as it provides suitable burrowing, refuge, and foraging habitat. This habitat can also provide suitable hunting habitat for Northern Quoll and Pilbara Leaf-nosed Bat in areas adjacent to Outcrops and Breakaways.

The Low *Acacia stellaticeps* over Triodia habitat had the highest number of fauna species recorded of all fauna habitats and supports significant fauna species such as Brush Tailed Mulgara, Bilby, and Western Pebble-mound Mouse. This habitat can also provide suitable hunting habitat for Northern Quoll and Pilbara Leaf-nosed Bat in areas adjacent to Outcrops and Breakaways.

Mixed Acacia Shrubs and Triodia Plains habitats recorded the second highest number of species of all fauna habitats. In addition, they support significant species that favours plains habitats, such as Brush-tailed Mulgara and Western Pebble-mound Mouse. When adjacent to Outcrops and Breakaways habitat they can also support significant fauna such as Northern Quoll and Pilbara Leaf-nosed Bat.

The Major and Minor Drainage Line habitats represent moderate value to significant fauna due to dense fringing shrubland which provide suitable foraging habitat and plays a role as an ecological linkage. These habitats may also contain ephemeral pools after significant rain events, providing valuable water sources for significant species such as Northern Quoll and Pilbara Olive Python.

Habitat condition varied throughout the Survey Area. Large portions of the Survey Area had been recently cleared for mining activity, drill pads, and associated access tracks. Weeds and degradation caused by cattle and historic settlement were observed throughout all habitats.

5.2.2 Significant Fauna

5.2.2.1 Recorded within the Survey Area during the current survey

Pilbara Leaf-nosed Bat (*Rhinonicteris aurantia*) (Pilbara form) – VU (BC Act); VU (EPBC Act)

The Pilbara Leaf-nosed Bat was originally considered to be the same species as the Orange Leaf-nosed Bat, which occurs in the Kimberley region, Northern Territory, and northwest Queensland. It is now considered to be a separate form based on morphology; however, formal reclassification has not yet been undertaken (Cramer et al., 2016). The taxon is restricted to areas with suitable day roosts, which are typically deep caves that retain humidity or disused underground mines (Cramer et al., 2016).

The Pilbara Leaf-nosed Bat was recorded once within the Outcrops and Breakaways habitat, and one was recorded by an ARU 10 m away from the mapped boundary of an Outcrops and Breakaways habitat. The caves in this habitat provide ideal roosting habitat for the taxon.

Western Pebble-mound Mouse (*Pseudomys chapmani*) – P4 (DBCA)

The Western Pebble-mound Mouse is endemic to the Pilbara, where it builds pebble mounds from small stones. These pebble mounds typically cover areas from 0.5 – 9.0m^2 and are characteristic of this species. Pebble mounds are restricted to suitable-class stones and are usually found on gentle slopes and spurs that are often vegetated by hard spinifex (Ford & Johnson, 2007; Van Dyck & Strahan, 2008). Active mounds are characterised by the conical shape of the mound with clear, distinct entrance holes (Anstee, 1996). Pebble mounds constructed by the Western Pebble-mound Mouse are found throughout the Pilbara; however, studies have shown that not all mounds in an area are occupied by a Pebble-mound Mouse at any one time (Anstee, 1996).

Western Pebble-mound Mouse mound was recorded three times within the Stony Hills habitat, and twice within the Outcrops and Breakaways habitat. Given the presence of an entrance hole and the lack of debris around the entrance, it is highly likely that the mounds are currently occupied. This species was recorded once within the Mixed Acacia Shrubs and Triodia Plains habitat, however, the record is < 40 m away from the mapped boundary of an Outcrops and Breakaways habitat, therefore it is considered an ecotone of the Outcrops and Breakaways habitat.

5.2.2.2 Previously recorded within the Survey Area

Northern Quoll (*Dasyurus hallucatus*) – EN (BC Act); EN (EPBC Act)

The range of the Northern Quoll has contracted across northern Australia since European settlement, and it now occurs as several disjunct populations (Braithwaite & Griffiths, 1994). The Northern Quoll can be locally common, but its former range has retracted considerably (Van Dyck & Strahan, 2008). The Northern Quoll is found in dissected rocky escarpments, utilising a variety of den sites, including rock crevices, tree hollows, logs, and termite mounds. It favours rocky areas, taking refuge in rock crevices, and utilises gullies and drainage lines.

It is important to note that much of the ecological information for the Northern Quoll comes from studies in the Top End of the Northern Territory (e.g. (Begg, 1981); (Oakwood, 2000). Much of their ecology is likely to be similar in the Pilbara; however, differences in genetic structure and some demographic parameters have been observed (How et al., 2009).

The Northern Quoll has a relatively large home-range size of up to 150 ha for males (35 ha for females). Movements between den sites on consecutive nights can be up to 1.85 km for males (Oakwood, 2000). In the Northern Territory, mating occurs in late May to June and all males die after the mating season and females rear the young alone (Oakwood, 2000). The young spend about two months in the pouch and are then left in a succession of nursery dens for the next three months for periods at night while the mother forages (Oakwood, 2000). In the Kimberley region, Schmitt et al. (1989) found that breeding occurred in July and August. However, at Woodstock Station in the Pilbara, breeding occurred in September, a month later than the Kimberley (How et al., 2009). This variation in time of breeding across three distinct populations indicates some reproductive flexibility in the species.

There is an abundant (1,282) amount of previous Northern Quoll records within and around the Survey Area (DBCA, 2023). Most of the previous records of the Northern Quoll are in the Outcrops and Breakaways habitat, except for one record less than 1 km away. This is expected as the Outcrops and Breakaways, as well as the surrounding habitats constitute core habitat for the Northern Quoll because of their value for denning and foraging. In addition, the records range from early 1980 to the current days, which shows that the species occupies the Survey Area consistently.

Bilby (*Macrotis lagotis*) – VU (BC Act); VU (EPBC Act)

The Bilby is a solitary and nocturnal type of bandicoot, characterised by its distinct rabbit-like ears and long face with a pointed snout (Department of Biodiversity Conservation and Attractions, 2017a). The range of the Bilby has declined northwards, with wild subpopulations now restricted predominantly to the Tanami Desert in the Northern Territory and the Gibson, Little Sandy and Great Sandy Deserts as well as parts of the Pilbara region in Western Australia (Dziminski & Carpenter, 2017; Southgate, 1990). The Bilby is described as occupying a wide range of vegetation types, including open tussock grassland on upland hills, Mulga woodland/shrubland growing on ridges and rises and spinifex growing on sandplains and dunes, drainage systems, salt lake systems, and other alluvial areas (Dziminski & Carpenter, 2017; Pavey, 2006).

This species was recorded in large numbers within the Survey Area during a previous survey (Phoenix Environmental, 2022). They were previously recorded in the Low *Acacia stellaticeps* over Triodia and Sparse Triodia Plains habitats. The field survey did not identify evidence of the species within the Survey Area. These habitats constitute core habitat for the Bilby because of their value for denning, foraging, and dispersal.

Oriental Pratincole (*Glareola maldivarum*) – MI (BC Act); MI, MA (EPBC Act)

The Oriental Pratincole typically prefers plains, shallow wet and dry edges of open bare wetlands and tidal mudflats and beaches for habitat (Pizzey & Knight, 2013). However, as this species breeds in Pakistan, India, and parts of south-east Asia, the Survey Area would be used for foraging only (Pizzey & Knight, 2013).

The Oriental Pratincole was previously recorded within the Survey Area in 2004 (DBCA, 2023), within the Low *Acacia stellaticeps* over Triodia habitat, which have the potential to become inundated during the wet season, providing the taxon with foraging habitat.

Brush-tailed Mulgara (*Dasycercus blythi*) - P4 (DBCA)

The Brush-tailed Mulgara is distributed widely across inland Australia with a population that fluctuates somewhat in response to seasonal conditions, although is probably substantially greater than 10,000 individuals even at its lowest point (Woinarski et al., 2014). Brush-tailed Mulgara habitat is bounded broadly by the Tanami Desert in the north, the Simpson Desert in the east, the Great Victoria Desert in the south and the Carnarvon, Murchison and Pilbara IBRA regions in the west (Woinarski et al., 2014). It is associated with hummock spinifex grasslands, but also uses other vegetation types (often sandplains, grasslands and woodlands) when mixed with or adjacent to hummock grasslands. It is mainly nocturnal and shelters during the day in burrow systems. Brush-tailed Mulgara burrows typically contain between two and nine entrances, tunnels are mostly on a single level and to a depth of about 300 mm (Thompson & Thompson, 2007). The diet of the Brush-tailed Mulgara comprises a broad range of invertebrates and small vertebrates (Woinarski et al., 2014).

The Brush-tailed Mulgara was previously recorded in the Low *Acacia stellaticeps* over Triodia habitat within the Survey Area (DBCA, 2023), which is the preferred habitat of the taxa. These records are concentrated to the western portion of the Survey Area, however, 83% of the Survey Area consists of Low *Acacia stellaticeps* over Triodia & Mixed Acacia Shrubs and Triodia Plains habitats, which indicates the species may be able to persist throughout the majority of the Survey Area.

Other Previously Recorded Species

There are three historical (1981) records of Marsh Sandpiper (*Tringa stagnatilis*), Red-necked Phalarope (*Phalaropus lobatus*), and Sanderling (*Calidris alba*) within the Survey Area (DBCA, 2023). All three records are associated with vouchered specimens by the Western Australian Museum and have the same coordinate.

The records of the three taxa are located in the Mixed Acacia Shrubs and Triodia Plains habitat, which is not the typical habitat preferred by these taxa (Menkhorst et al., 2019; Pizzey & Knight, 2013). Therefore, considering the age of the records, it is reasonable to assume the coordinates are inaccurate, and the specimens were likely vouched north of the Survey Area near the coast, where most of the recent records of these species are located.

The Sanderling (*Calidris alba*) seldomly ventures away from the coast (Menkhorst et al., 2019; Pizzey & Knight, 2013), but the Marsh Sandpiper (*Tringa stagnatilis*) and the Red-necked Phalarope (*Phalaropus lobatus*) are able to utilize freshwater wetland habitat (Menkhorst et al., 2019; Pizzey & Knight, 2013). Considering there are tidal flats < 10 km to the north of the Survey Area, and major drainage habitat connecting these tidal flats to the Survey Area, it is possible for these species occupy the Survey Area after significant rain events. However, if we consider the records inside the Survey Area to be inaccurate, then their adjusted likelihood would be Low, as there are minimal recent or nearby records and limited suitable habitat.

5.2.2.3 High likelihood of occurrence within the Survey Area

Grey Falcon (*Falco hypoleucos*) – VU (BC Act); VU (EPBC Act)

The Grey Falcon is an elusive and endemic bird of the arid interior (Schoenjahn et al., 2019). It distributed sparsely over Australia's arid and semi-arid zones and is absent from Cape York Peninsula, south of the Great Dividing Range in Victoria, and south of 26°S in Western Australia (BirdLife International, 2016a; Johnstone & Storr, 2004). The Grey Falcon is restricted largely to areas of the highest annual average temperatures where there is average annual rainfall of less than 500 mm. It favours lightly timbered and untimbered lowland plains that are crossed by tree-lined watercourses, but frequents other habitats, including grassland and sand dune habitats (BirdLife International, 2016a; Johnstone & Storr, 2004).

The Survey Area has three Major Drainage habitats with eucalypt trees along the riverbanks, which constitute suitable nesting habitat for the Grey Falcon. The plains surrounding Major Drainage habitats are likely to be utilised by this taxon for hunting.

Ghost Bat (*Macroderma gigas*) – VU (BC Act); VU (EPBC Act)

The Ghost Bat is patchily distributed in small colonies in three areas of northern Australia, including the Pilbara and Kimberley in WA, the Northern Territory, and the northeast of QLD. The species requires undisturbed roost caves or mineshafts, usually complex systems with several openings (Van Dyck & Strahan, 2008). The species eats large insects, geckoes, frogs, small birds, and mammals including other bats. The kills are made on the ground or in the air and then taken to a feeding perch, which is usually a rocky overhang or small cave (Van Dyck & Strahan, 2008).

The presence of other bat species in the Survey Area indicates that there are suitable roosting caves for Ghost bat in the vicinity of the Survey Area. Ghost Bat also predate heavily on other bat species, particularly Pilbara Leaf-nosed Bat, which were recorded during the field survey. The Major and Minor Drainage habitats constitute moderate value habitat as the taxon may use these habitats for foraging and dispersal.

Pilbara Olive Python (*Liasis olivacea barroni*) – VU (BC Act); VU (EPBC Act)

The Olive Python occurs in the ranges of the Pilbara, typically in escarpments and gorges where water is present. It generally shelters under rock piles, or under spinifex and often basks on top of rocks (Pearson, 1993, 2003). This large python is threatened due to its relatively small distribution, low population densities and may be affected by habitat disturbance such as grazing and fire. This species is known to frequent water bodies where it ambushes prey (Pearson, 1993). During a systematic survey of a large series of quadrats in the Pilbara, the Olive Python was only recorded in one quadrat (Doughty et al., 2011). This species is extremely cryptic given its method of hunting and nocturnality.

The Pilbara Olive Python was recorded frequently and recently throughout the Desktop Study Area. Preferred habitat is not present within the Survey Area; however, several water source occur throughout the desktop study area which have recorded the species that are linked to the Survey Area. The taxon is likely to use Outcrops and Breakaways habitats for dispersal and the Major and Minor Drainages provide supporting habitat.

Common Greenshank (*Tringa nebularia*) – MI (BC Act); MI, MA (EPBC Act)

The Common Greenshank is a migratory species to Australia that typically breeds in the boreal forest zone from sea level to 1,200 m in Norway (BirdLife International, 2016b). Common Greenshanks are present in the North-west Marine Region in internationally significant numbers, with approximately 1% of the flyway population visiting Ashmore Reef between September and March (Bamford et al., 2008). The species is found in coastal areas, riverbanks and coastal to freshwater wetlands, where it wades in shallow water foraging for prey, often lunging or probing for fish and invertebrates (BirdLife International, 2016b; Menkhorst et al., 2017; Pizzey & Knight, 2001). It is generally absent from the Western Deserts although there are a few records from the Great Sandy Desert and the Nullarbor Plain. It occurs around most of the coast from Cape Arid in the south to Carnarvon in the north-west. In the Kimberley it is recorded in the south-west and the north-east (Pizzey & Knight, 2001).

The Common Greenshank has been recorded frequently and recently within the Desktop Study Area and likely occurs within the Survey Area. Within the Survey Area, the Mixed Acacia Shrubs and Triodia Plains, and Sparse Triodia Plains habitats constitute supporting habitat for the Common Greenshank as they may become flooded after significant rain events. The taxon is likely to be transient within the Survey Area and, if present, will occur within the Survey Area between August and March.

Barn Swallow (*Hirundo rustica*) – MI (BC Act); MI, MA (EPBC Act)

The Barn Swallow is a casual visitor primarily to coastal areas from the Gascoyne north, although the species may appear as a vagrant in inland areas on an irregular basis (Johnstone & Storr, 1998). After breeding in the temperate and subtropical regions of North America, Europe, northern Africa and Asia it migrates to the southern hemisphere where it spends the boreal winter (Johnstone & Storr, 1998). It is typically observed in the vicinity of urban water bodies and coastal wetlands.

The Barn Swallow has been recorded frequently within the Desktop Study Area and likely occurs within the Survey Area. Within the Survey Area, the Major and Minor Drainage habitats constitute supporting habitat for the Barn Swallow because of their value for roosting, foraging, and dispersal. The taxon is likely to be transient within the Survey Area and, if present, will occur within the Survey Area between Spring and Summer.

Little Curlew (*Numenius minutus*) – MI (BC Act); MI, MA (EPBC Act)

The Little Curlew is the smallest curlew, and generally spend the non-breeding season in northern Australia from Port Hedland in Western Australia to the Queensland coast. The Little Curlew is most often found feeding in short, dry grassland and sedgeland, including dry floodplains and blacksoil plains, which have scattered, shallow freshwater pools or areas seasonally inundated. Open woodlands with a grassy or burnt understorey, dry saltmarshes, coastal swamps, mudflats or sandflats of estuaries or beaches on sheltered coasts, mown lawns, gardens, recreational areas, ovals, racecourses and verges of roads, and airstrips are also used. Foraging sites are usually within 5 km of daytime roosting sites, as birds move between grassland and wetland, most feeding in drier grassland occurring during the first few hours after dawn and the late afternoon (DAWE, 2022).

The Little Curlew has been recorded frequently and recently within the Desktop Study Area and likely occurs within the Survey Area. Within the Survey Area, the Mixed Acacia Shrubs and Triodia Plains, and Sparse Triodia Plains habitats constitute supporting habitat for the Little Curlew as they may become flooded after significant rain events. The taxon is likely to be transient within the Survey Area and, if present, will occur within the Survey Area between October and April.

Oriental Plover (*Charadrius veredus*) – MI (BC Act); MI, MA (EPBC Act)

The Oriental Plover typically prefers grasslands and thinly vegetated plains, and open areas such as recently burnt country and heavily grazed pastures. During the hottest times of the day large flocks can be found on areas of wet ground associated with wetlands (Menkhorst et al., 2017). As this species breeds in China and Mongolia, the Survey Area would be used for foraging only.

The Oriental Plover has been recorded recently within the Desktop Study Area and likely occurs within the Survey Area. Within the Survey Area, the Mixed Acacia Shrubs and Triodia Plains, and Sparse Triodia Plains habitats constitute supporting habitat for the Oriental Plover as they may become flooded after significant rain events. The taxon is likely to be transient within the Survey Area during these flooding events and, if present, will occur within the Survey Area between mid-September and April.

Osprey (*Pandion haliaetus*) – MI (DBCA); MI, MA (EPBC Act)

The Osprey is considered to be moderately common in Australia (P. Olsen, 1998). The species is most abundant in northern Australia, where high population densities occur in remote areas (Johnstone & Storr, 1998). They require extensive areas of open fresh, brackish, or saline water for foraging (Marchant and Higgins, 1993). They are mostly found in coastal areas but occasionally travel inland along major rivers, particularly in northern Australia (Johnstone & Storr, 1998; P. Olsen, 1998). They frequent a variety of wetland habitats including inshore waters, reefs, bays, coastal cliffs, beaches, estuaries, mangrove swamps, broad rivers, reservoirs and large lakes and waterholes (Johnstone & Storr, 1998; P. Olsen, 1998).

The Osprey has been recorded recently within the Desktop Study Area and is likely to occur within the Survey Area. Within the Survey Area, the Major and Minor Drainage habitats constitute critical habitat for the Osprey because of their value for hunting and dispersal. The taxon is likely to be transient within the Survey Area during flooding events.

Peregrine Falcon (*Falco peregrinus*) – OS (DBCA)

The Peregrine Falcon is an uncommon but wide-ranging bird across Australia (Barrett et al., 2003). It occurs mainly along rivers and ranges as well as wooded watercourses and lakes. It nests primarily on cliffs, granite outcrops and quarries, although is also known to occupy existing raptor and corvid stick nests (Menkhorst et al., 2019). The diet of the Peregrine Falcon has been well studied and primarily includes flocking species such as parrots, pigeons and on the east coast, European Starlings (J. Olsen & Fuentes, 2008).

Peregrine Falcon was not observed during the survey; however, this species has been previously recorded twice within 3 km of the Survey Area in recent years (DBCA, 2023). In the absence of cliff ledges, Peregrine Falcons will use trees for nesting (Morcombe & Stewart, 2013). The Open Eucalypt Woodland habitat within the Survey Area and surrounds may provide suitable nesting and hunting habitat to support this species.

5.2.2.4 Medium likelihood of occurrence within the Survey Area

Glossy Ibis (*Plegadis falcinellus*) – MI (BC Act); MI, MA (EPBC Act)

The preferred foraging and breeding habitat of the Glossy Ibis includes freshwater marshes at the edges of lakes and rivers, lagoons, floodplains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation (del Hoyo et al., 1992; Marchant & Higgins, 1990). The Glossy Ibis builds a platform nest of sticks in trees or shrubs above water and typically nests in colonies (Pizzey & Knight, 2013). The distribution of the Glossy Ibis is generally east of the Kimberley in Western Australia and Eyre Peninsula in South Australia. The species is also known to be patchily distributed in the rest of Western Australia (DEE, 2020).

The Glossy Ibis has been recorded within the Desktop Study Area and may occur within the Survey Area. Within the Survey Area, there are several habitats which may flood during significant rain events and provide suitable habitat for the Glossy Ibis. The taxon may be transient within the Survey Area during these flooding events.

Pacific Swift/Fork-tailed Swift (*Apus pacificus*) – MI (BC Act); MI, MA (EPBC Act)

The Pacific Swift is almost exclusively aerial, flying from less than 1 m to at least 300 m above ground and probably much higher. The Pacific Swift occupies a large airspace range (i.e. low to very high) over varied habitats, ranging from rainforests to semi-deserts (Morcombe, 2003).

The Pacific Swift has been recorded within the Desktop Study Area and may occur within the Survey Area. Within the Survey Area, all habitats within the Survey Area may be utilised for foraging and dispersal.

Pilbara Grasswren (*Amytornis whitei whitei*) – P4 (as *Amytornis striatus striatus*, DBCA)

Restricted to spinifex associations on rocky slopes and ridges, with or without shrubs or light tree cover, preferring areas with tall dense spinifex hummocks (Menkhorst et al., 2019). Its distribution across the ironstone Chichester, Hamersley, Ophthalmia and Parry Ranges is bisected by the Fortescue River, with an outlying population south of the Ashburton River in the Barlee Range. It is widely but patchily distributed and generally uncommon (Johnstone et al., 2013; Johnstone & Storr, 2004).

The Pilbara Grasswren has been recorded within the Desktop Study Area and may occur within the Survey Area. Within the Survey Area, the Sparse Triodia Plains and Stony Hills habitats constitute critical habitat for the Pilbara Grasswren because of their value for foraging and shelter.

Short-tailed Mouse (*Leggadina lakedownensis*) – P4 (DBCA)

The Short-tailed Mouse has a broad distribution across much of northern Australia and occurs in a range of habitat types. This includes spinifex and Acacia on seasonally inundated sandy-clay soils as well as sandy soils and cracking clays to build burrows which they shelter in during the day (Van Dyck & Strahan, 2008). In the Pilbara it occurs on stony hummock grassland. It is generally rare, with scattered populations, and very little is known of its biology (Van Dyck & Strahan, 2008).

The Short-tailed Mouse has been recorded within the Desktop Study Area and may occur within the Survey Area. Within the Survey Area, the Sparse Triodia Plains and Stony Hills habitats constitute critical habitat for the Short-tailed Mouse because of their value for foraging and shelter.

Other species with medium likelihood of occurrence within the Survey Area

There were an additional 20 shorebird species that were considered to have a medium likelihood of occurrence due to the proximity of historic records and the limited suitable habitats within the Survey Area. As there are suitable tidal flats < 10 km north of the Survey Area, and there are drainage habitats that connect these flats to the Survey Area, there presents an opportunity for these species to occur within the Survey Area after significant rain events that would flood these habitats.

6.0 Conclusion

Flora and Vegetation

- No Threatened flora species pursuant to the EPBC Act 1999 and/or gazetted as Threatened/Declared Rare Flora pursuant to the BC Act 2016 were recorded during the survey.
- Two DBCA listed Priority flora are considered to have been recorded; *Tephrosia rosea* subsp. Port Hedland (A.S. George 1114) (P1) and *Gymnanthera cunninghamii* (P3).
- Eight introduced species were recorded during the survey, including **Calotropis procera* which is listed by the State Department of Primary Industries and Regional Development as a Declared Pest.
- Fourteen vegetation types were mapped within the Survey Area, one of which likely represents GDEs. Vegetation condition throughout the Survey Area was largely in Very Good condition, with drainages and some low-lying floodplain areas in Good to Degraded condition, primarily due to Buffel Grass (**Cenchrus ciliaris*) and livestock/pastoralism.
- No TECs or PECs were recorded within the Survey Area.

Vertebrate Fauna

- Nine fauna habitats were mapped within the Survey Area, of which the Low *Acacia stellaticeps* over Triodia, Mixed Acacia Shrubs and Triodia Plains, Outcrops and Breakaways, and Stony Hills habitats represent the most value to fauna assemblages overall.
- Two significant fauna species were recorded during the fauna survey.
- Seven significant fauna species were previously recorded within the Survey Area.
- Nine significant fauna species had a high likelihood of occurrence, 24 had a medium likelihood of occurrence, and 33 species had a low likelihood of occurrence.
- Three introduced species were recorded during the survey, European Cattle (**Bos primigenius taurus*), Cat (**Felis catus*), and Domestic Pigeon/Rock Dove (*Columba livia*).

Atlas Ridley Magnetite Project Connection

Flora and Fauna Survey Technical Report

Horizon Power

SLR Project No.: 675.072189.00001

29 July 2024

Report	Project Area	Survey Timing	Survey Effort	Conservation Significant Ecological Communities	Conservation Significant Flora	Introduced Flora
Detailed Flora and Vegetation Assessment, Ridley Magnetite Project (Focused Vision 2023)	Assessment intersects the current survey area	May, June, July 2022, and June, August 2023	Detailed flora and vegetation assessment	Presence of the Eighty Mile Land System PEC (P3)	• *Atriplex eremitis* (P1) • *Tephrosia rosea* var. Port Hedland (A.S. George 1114) (P1) • *Euphorbia inappendiculata* var. *queenslandica* (P2) • *Rothia indica* subsp. *australis* (P3)	• **Calotropis procera* • **Parkinsonia aculeata*
De Grey South Borefield Biological Surveys (SLR Consulting, 2023),	10 km east of the Survey Area.	July 2023	Detailed flora and basic fauna vegetation assessment	None recorded	None recorded	• **Calotropis procera* • **Cenchrus ciliaris* • **Cenchrus setiger* • **Chloris barbata* • **Vachellia farnesiana*
Flora and Vegetation Assessment, Port Hedland Regional (ENV Australia 2011)	Directly west of the current survey area	April – May 2011, June – July 2011	Detailed flora and vegetation assessment	None recorded	• *Abutilon* sp. Pritzelianum (S. van Leeuwen 5095) (P3) • *Euploca muticum* (P3) • *Tephrosia rosea* var. Port Headland (A.S. George 1114) • *Gomphrena pusilla* (P2)	• **Aerva javinica* • **Cenchrus ciliaris* • **Citrulus colocynthis* • **Cucumis melo* subsp. *agrestis* • **Eragrostis curvula* • **Flaveria trinerva* • **Indigofera sessiliflora* • **Physalis angulate* • **Portulaca oleracea* • **Stylosanthes hamata* • Vaccaria hispanica • **Vachellia farnesiana*
Flora and Vegetation Assessment, Corunna Downs Intersection Works (Woodman Environmental 2017)	Approximately 90 km southeast of the survey area	April 2017	Reconnaissance Flora and Vegetation Survey	None recorded	None recorded	• **Aerva javanica* • **Cenchrus ciliaris*

Report	Project Area	Survey Timing	Survey Effort	Conservation Significant Ecological Communities	Conservation Significant Flora	Introduced Flora
Corunna Downs Project, Level 2 Flora and Vegetation Assessment (Woodman Environmental 2016)	Approximately 90 km southeast of the survey area	March – April 2014, April – May 2014, and May 2016	Detailed Flora and Vegetation Survey	None recorded	• *Cochlospermum macnamarae* (P1) • *Rothia indica* subsp. *australis* (P3) • *Schoenus coultasii* (P1) • *Stylidium weeliwolli* (P3) • *Acacia levata* (P3) • *Eragrostis crateriformis* (P3) • *Heliotropium murinum* (P3) • *Nicotiana umbratical*(P3) • *Rostellularia adscendens* var. *latifolia* (P3) • *Swainsona thompsoniana* (P3) • *Ptilotus mollis* (P4)	• **Aerva javanica* • **Argemone ochrileuca* subsp. *ochroleuca* • **Calotropis procera* • **Cenchrus ciliaris* • **Cenchrus setiger* • **Chloris barbata* • **Cynodon dactylon* • **Echonochloa colona* • **Flaveria trinerva* • **Malvastrum Americanum* • **Passiflora foetida* var. *hispida* • **Portulaca pilosa* • **Setaria verticillata* • **Solanum nigrum* • **Sonchus oleraceus* • **Tribulus terrestris* • **Vachellia farnesiana*
Wodgina Gas Pipeline, Detailed Flora and Vegetation Survey (360 Environmental 2018)	Approximately 30 km southeast of the survey area	June 2018	Detailed Flora and Vegetation Survey	None recorded	• *Euphorbia clementii* (P3)	• **Aerva javanica* • **Malvastrum americanum* • **Cenchrus ciliaris*
Roy Hill Port Facility Power Line Port Hedland, Ecological Assessment (GHD 2016)	Approximately 15 km north of the survey area	June 2016	Reconnaissance Flora and Vegetation Survey	None recorded	None recorded	• **Aerva javanica* • **Cenchrus ciliaris*
Flora and Fauna survey Port Hedland International Airport – Highway Precinct	Approximately 10 km north of the survey area	November 2018	Reconnaissance Flora and Vegetation Survey	None recorded	• *Gomphrena leptophylla* (P3)	• **Washingtonia filifera* • **Aerva javanica* • **Calatropis procera* • **Cenchrus ciliaris*

Report	Project Area	Survey Timing	Survey Effort	Conservation Significant Ecological Communities	Conservation Significant Flora	Introduced Flora
2 (Emerge Associates 2019)						• **Cenchrus setiger*
Flora and Vegetation Reconnaissance Survey of Spoilbank Marina Project Area (Strategen-JBS&G 2020)	Approximately 15 km north of the survey area		Reconnaissance Flora and Vegetation Survey	None recorded	None recorded	• **Aerva javanica* • **Calatropis procera* • **Cenchrus ciliaris* • **Spathodea campanulate* • **Stylosanthes hamata* • **Tamarix aphylla*

ID	Report	Project Area	Survey Timing	Survey Effort	Significant Fauna Recorded Onsite	Fauna Habitats
Lit A	Ridley Detailed Terrestrial Vertebrate Fauna Survey (Biota, 2024)	Overlaps with the eastern section of the Survey Area	June 2022 – June 2023	Detailed fauna survey	• Far Eastern Curlew (*Numenius madagascariensis*) – CR (BC Act & EPBC); MI (EPBC Act) • Northern Quoll (*Dasyurus hallucatus*) – EN (BC & EPBC Act) • Pilbara Leaf-nosed Bat (*Rhinonicteris aurantia* Pilbara form) – VU (BC & EPBC Act) • Ghost Bat (*Macroderma gigas*) – VU (BC & EPBC Act) • Pilbara Olive Python (*Liasis olivaceus barroni*) – VU (BC & EPBC Act) • Brush-tailed Mulgara (*Dasycercus blythi*) – P4 (DBCA) • Western Pebble-mound Mouse (*Pseudomys chapmani*) – P4 (DBCA) • Pacific Swift (*Apus pacificus*) – MI (BC & EPBC) • Australian Tern (*Gelochelidon macrotarsa*) – Mi (BC & EPBC Act) • Peregrine Falcon (*Falco peregrinus*) – OS (BC Act)	Seven fauna habitats were identified: • Acacia shrubland over spinifex sandplain • Rocky hills • Major drainage line • Spinifex and saltbush flat • Medium drainage line • Tussock grassland • Cleared areas

ID	Report	Project Area	Survey Timing	Survey Effort	Significant Fauna Recorded Onsite	Fauna Habitats
Lit B	Ridley Services Corridors Basic and Targeted Fauna Survey (Biota, 2023)	Overlaps the Survey Area	June 2023	Basic and Targeted fauna survey	• Bar-tailed Godwit (*Limosa lapponica*) – CR (BC Act & EPBC Act); MI (EPBC Act) • Northern Quoll (*Dasyurus hallucatus*) – EN (BC & EPBC Act) • Brush-tailed Mulgara (*Dasycercus blythi*) – P4 (DBCA) • Western Pebble-mound Mouse (*Pseudomys chapmani*) – P4 (DBCA) • Eurasian Whimbrel (*Numenius phaeopus*) – MI (BC & EPBC Act) • Sanderling (*Calidris alba*) – MI (BC & EPBC Act) • Australian Tern (*Gelochelidon macrotarsa*) – MI (BC & EPBC Act) • Common Gull-billed Tern (*Gelochelidon nilotica*) – MI (BC & EPBC Act) • Caspian Tern (*Hydroprogne caspia*) – MI (BC & EPBC Act) • Greater Crested Tern (*Thalasseus bergii*) – MI (BC & EPBC Act) • Little Tern (*Sternula albifrons*) – MI (BC & EPBC Act)	Eleven fauna habitats were identified: • Acacia shrubland over spinifex sandplain • Tussock grassland • Spinifex sandplain • Spinifex and saltbush flat • Open eucalypt woodland • Rocky hills • Medium drainage line • Major drainage line • Coastal dunes • Sandy beach • Cleared areas

ID	Report	Project Area	Survey Timing	Survey Effort	Significant Fauna Recorded Onsite	Fauna Habitats
Lit C	Detailed terrestrial fauna and targeted Bilby survey for the Port Hedland Solar Farm Project (Pheonix Environmental, 2022)	Overlaps the western section of the Survey Area	March – October, 2021	Detailed fauna, Targeted Bilby, and SRE survey	• Bilby (*Macrotis lagotis*) – VU (BC Act & EPBC Act) • Brush-tailed Mulgara (Dasycercus blythi) – P4 (DBCA)	Eleven fauna habitats were identified: • Beach/Dune • Tidal Flats • Mangroves • Riverine • Sandplain • Billabong • Low Hill • Granite Tor/Isolated Rockpile • Quartz Hill • Ocean • Disturbed
Lit D	Wodgina Gas Pipeline targeted Fauna Survey (360 Environmental Pty Ltd, 2018)	Approx. 20 km southwest of the Survey Area	June 2018	Targeted fauna survey	• Bilby (*Macrotis lagotis*) – VU (BC Act & EPBC Act) • Pilbara Leaf-nosed Bat (*Rhinonicteris aurantia* Pilbara form) – VU (BC Act & EPBC Act)	Five fauna habitats were identified: • Grassland • Low woodland • Low-lying habitat • Major drainage lines
Lit E	Wodgina Project: Level 1 Fauna Survey, Targeted Conservation Significant Fauna Survey and Desktop Assessment (Stantec Australia Pty Ltd, 2018)	Approx 80 km south of the Survey Area	July 2018	Basic Fauna Survey Targeted Fauna Survey	• Northern Quoll (*Dasyurus hallucatus*) – EN (BC Act & EPBC Act) • Pilbara Leaf-nosed Bat (*Rhinonicteris aurantia* Pilbara form) – VU (BC Act & EPBC Act)	Six fauna habitats were identified: • Ironstone ridge top • Rocky ridge and gorge • Rocky foothills • Stony Rise • Spinifex stony plain • Drainage line

ID	Report	Project Area	Survey Timing	Survey Effort	Significant Fauna Recorded Onsite	Fauna Habitats
					• Ghost Bat (*Macroderma gigas*) – VU (BC Act & EPBC Act) • Western Pebble-mound Mouse (*Pseudomys chapmani*) – P4 (BC Act)	
Lit F	Pardoo Stage 3 Irrigation Project and 80 Mile Beach Ramsar Site Fauna Assessment (Bamford Consulting Ecologists, 2017b)	Approx. 100 km east of Survey Area	12 -14 July 2016, 18 - 21 Sept 2017	Basic fauna survey Targeted fauna survey	• Fork-tailed Swift *(Apus pacificus*) - MI (BC Act), MI & MA (EPBC Act) • Oriental Plover (*Charadrius veredus*) - MI (BC Act), MI & MA (EPBC Act) • Brush-tailed Mulgara (*Dasycercus blythi*) – P4 (DBCA) • Bilby (Macrotis lagotis) – VU (BC Act & EPBC Act)	Six fauna habitats were identified: • Pindan shrublands • Coastal plain thickets and shrublands • Coastal plain grasslands and low shrublands • Salt pans • Low limestone ridges • Completely degraded area associated with agricultural structures.
Lit G	Assessment of the Bilby Macrotis lagotis Pardoo Station; Stage 2 areas (Bamford Consulting Ecologists, 2017a)	Approx. 100 km east of Survey Area	28 - 30 June 2017	Targeted fauna survey	• Bilby (*Macrotis lagotis*) – VU (BC Act & EPBC Act)	One fauna habitat was identified: • Pindan shrublands
Lit H	Supplementary Flora and Vegetation Survey and Terrestrial Fauna Survey for the Balla Balla Infrastructure Group Ltd (Phoenix Environmental, 2018)	Approx 100 km west of the Survey Area	June 2017	Basic Fauna Survey Targeted Fauna Survey	• Northern Quoll (Dasyurus hallucatus) – EN (BC Act & EPBC Act) • Bilby (Macrotis lagotis) – VU (BC Act & EPBC Act)	Seven fauna habitats were identified: • Hummock and tussock grassland • Minor creek and drainage line • Open and closed shrubland • Rocky hill slope

ID	Report	Project Area	Survey Timing	Survey Effort	Significant Fauna Recorded Onsite	Fauna Habitats
						• Woodland • Gully Sandplain
Lit I	Assessment of the Bilby Macrotis lagotis Pardoo Station; Stage 2 and 3 project areas (Bamford Consulting Ecologists, 2016)	Approx. 100 km east of Survey Area	12 - 14 July 2016	Targeted fauna survey	• Brush-Tailed Mulgara (*Dasycercus blythi*) – P4 (BC Act)	One fauna habitat was identified: • Pindan shrublands
Lit J	Terrestrial Fauna Surveys for the Balla Balla Railway Project (Phoenix Environmental, 2014)	Approx 100 km west of the Survey Area	June – July 2014	Targeted Fauna Survey	• Northern Quoll (Dasyurus hallucatus) – EN (BC Act & EPBC Act) • Western Pebble-mound mouse (Pseudomys chapmani) – P4 (BC Act))	Eight fauna habitats were identified: • Hummock and tussock grassland • Open and closed shrubland • Rocky hill slope • Minor creek and drainage line • Woodland • Gully • Isolated sand dunes

Appendix C: Assessment of the Likelihood of Occurrence of Threatened and Priority Flora as per Desktop Assessment Database Searches surrounding the Survey Area

Distance to Nearest Record from the Survey Area is based on a distance analysis undertaken against 2024 DBCA database. High = Suitable habitat present and records less than 20 km from the Survey Area, Medium = Suitable habitat present and records between 20 km and 40 km from the Survey Area, and Low = No suitable habitat present and/or records greater than 40 km from the Survey Area, Unknown = Insufficient information available to classify . CR= Listed as Critically Endangered under the EPBC Act, EN = Listed as Endangered under the EBPC Act, VU = listed as Vulnerable under the EBPC Act. T = Threatened under the BC Act, P = Priority Listed, Ranked and Listed by the DBCA. Likelihoods are assessed both pre and post survey based on knowledge of the Survey Area, nearest known records, known flowering period of flora taxa and knowledge gained from the survey effort during ground truthing. 1: Department of Biodiversity, Conservation and Attractions (2024). FloraBase - TheWestern Australian Flora. https://florabase.dpaw.wa.gov.au/

Species	Conservation Status		Source			Distance to Nearest Record (km)	Flowering Period	Prefered Habitat	Pre-Survey Likelihood of Occurrence	Habitat Occurs in Survey Area?	Post-Survey Likelihood of Occurrence
	DBCA	EPBC	NatureMap	PMST	DBCA						
Threatened											
Quoya zonalis	T	EN			X	77.53	Aug	Rocky ironstone or granite or conglomerate steep hill slopes.[1]	Low	No	Low
Priority 1											
Acacia cyperophylla var. *omearana*	P1				X	73.40	Mar - Apr	Stony and gritty alluvium. Along drainage lines.[1]	Low	No	Low
Acacia leeuweniana	P1				X	91.78	Apr - May	Gritty, skeletal red-grey sandy loam, light orange-brown gravelly sand, granite. In rock fissures in outcrops, among boulders.[1]	Low	No	Low
Atriplex eremitis	P1		X		X	18.78	Aug	Tussock grassland associated with *Eragrostis xerophila* and the introduced *Cenchrus ciliaris* occurring as a component of a sub-unit of the Anna land system composed of level sand plains and a mosaic of saline plains.[1]	Low	No	Low
Corchorus sp. Yarrie (J. Bull & D. Roberts CAL 01.05)	P1				X	61.34	Jun	Drainage line, ironstone, loamy soil.[1]	Low	Yes	Low
Euploca parviantrum	P1		X		X	6.87	-	Sandy soils. Flats, plains, rocky slopes.[1]	High	Yes	Medium
Tephrosia rosea var. Port Hedland (A.S. George 1114)	P1		X		X	3.83	Jul - Sep	Pale red/yellow/brown sand. Sand plains.[1]	High	Yes	Recorded
Themeda sp. Panorama (J. Nelson et al. NS 102)	P1				X	85.41	-	Skeletal soils, red clay loam. Rock gullies, steep rocky slopes, high in the landscape.[1]	Low	No	Low
Triodia degreyensis	P1				X	6.18	-	Skeletal soils, ironstone outcropping. [1]	Low	Yes	Low
Priority 2											
Euphorbia inappendiculata var. *inappendiculata*	P2				X	60.93	May, Aug	Red, brown clay or loam. Plains.[1]	Low	Yes	Medium
Gomphrena pusilla	P2		X		X	8.05	Mar - Apr	Fine beach sand. Behind foredune, on limestone.[1]	Low	No	Low
Priority 3											

[1] Department of Agriculture, Water and Environment (2024) [2]Western Australian Herbarium (2024)

Abutilon sp. Pritzelianum (S. van Leeuwen 5095)	P3		X		X	3.03	Jun, Aug - Sep	Sandy plains.[1]	High	Yes	Medium
Acacia levata	P3				X	98.73	May	Sand or sandy loam over granite. Hillslopes.[1]	Low	Yes	Low
Dolichocarpa sp. Hamersley Station (A.A. Mitchell PRP 1479)	P3				X	72.70	May - Jul or Sep	Brown sandy clay, or medium clay. Claypans, drainage lines, cracking clays, crabhole plains.[1]	Low	No	Low
Eragrostis crateriformis	P3		X		X	0.15	Jan - May or Jul	Clayey loam or clay. Creek banks, depressions.[1]	High	Yes	High
Euphorbia clementii	P3		X		X	6.19	Jun	Gravelly hillsides, stony grounds.[1]	High	Yes	Medium
Euploca mutica	P3		X		X	0.08	Aug	Flat sand plains.[1]	High	Yes	High
Gomphrena cucullata	P3		X		X	47.87	Feb - Apr	Red sandy loam, clayey sand. Open floodplains.[1]	Low	Yes	Low
Gomphrena leptophylla	P3		X		X	6.31	Mar - Sep	Sand, sandy to clayey loam, granite, quartzite. Open flats, sandy creek beds, edges salt pans and marshes, stony hillsides.[1]	High	No	Low
Goodenia obscurata	P3				X	75.95	-	Stony soils on hills.[1]	Low	Yes	Low
Gymnanthera cunninghamii	P3		X		X	6.87	Jan - Dec	Sandy soils.[1]	High	Yes	Recorded
Heliotropium murinum	P3				X	55.50	May or Sep	Red sand. Plains.[1]	Low	Yes	Low
Indigofera ammobia	P3				X	94.15	Sep	Red sand. Sand dunes.[1]	Low	No	Low
Nicotiana umbratica	P3				X	72.04	Apr - Jun	Shallow soils. Rocky outcrops.[1]	Low	Yes	Low
Phyllanthus hebecarpus	P3				X	86.93	-	Granite boulders, granite outcrop, rock land, slopes.[1]	Low	Yes	Low
Rothia indica subsp. *australis*	P3		X		X	Occurs within survey boundary	Apr - Aug	Sandy soils. Sandhills and sandy flats.[1]	High	Yes	Medium
Stylidium weeliwolli	P3				X	53.32	Aug - Sep	Gritty sand soil, sandy clay. Edge of watercourses.[1]	Low	Yes	Low
Terminalia supranitifolia	P3				X	76.29	May or Jul or Dec	Sand. Among basalt rocks. Hill tops.[1]	Low	No	Low
Triodia basitricha	P3				X	77.78	-	Stony ground, gravelly hill, crests, hills, in gorges.[1]	Low	Yes	Low
Triodia chichesterensis	P3		X		X	9.67	Feb - Apr, Aug	Flat plains, light sandy soil, hill slopes, stony soil.[1]	High	Yes	Low
Vigna triodiophila	P3				X	66.94	Mar - May	Stony red-brown clay loam. Among boulders, steep slopes.[1]	Low	No	Low
Priority 4											

[1] Department of Agriculture, Water and Environment (2024) [2]Western Australian Herbarium (2024)

Bulbostylis burbidgeae	P4		X		X	5.85	Mar or Jun - Aug	Granitic soils. Granite outcrops, cliff bases.[1]	High	Yes	Medium
Ptilotus mollis	P4		X		X	20.05	May or Sep	Stony hills and screes.[1]	Low	No	Low

Appendix D Flora Recorded During the Survey

Atlas Ridley Magnetite Project Connection

Flora and Fauna Survey Technical Report

Horizon Power

SLR Project No.: 675.072189.00001

29 July 2024

Appendix A: Flora Inventory

Family	Taxa	Status
Aizoaceae	*Trianthema triquetrum*	
Amaranthaceae	*Aerva javanica*	Weed
	Alternanthera nana	
	Ptilotus astrolasius	
	Ptilotus axillaris	
	Ptilotus exaltatus	
	Ptilotus fusiformis	
	Ptilotus murrayi	
	Ptilotus sp.	
Apocynaceae	*Calotropis procera*	Weed (DP)
	Carissa lanceolata	
	Cynanchum floribundum	
	Cynanchum viminale subsp. *australe*	
	Gymnanthera cunninghamii	P3
Asteraceae	*Pluchea dentex*	
	Pluchea ferdinandi-muelleri	
	Pluchea rubelliflora	
	Streptoglossa sp.	
Bignoniaceae	*Dolichandrone occidentalis*	
Boraginaceae	*Euploca cunninghamii*	
	Trichodesma zeylanicum var. *zeylanicum*	
Campanulaceae	*Wahlenbergia tumidifructa*	
Capparaceae	*Capparis spinosa* subsp. *nummularia*	
	Capparis umbonata	
Chenopodiaceae	*Maireana melanocoma*	
	Salsola australis	
	Sclerolaena hostilis	
Cleomaceae	*Arivela viscosa*	
Combretaceae	*Terminalia circumulata*	
Convolvulaceae	*Bonamia alatisemina*	
	Bonamia erecta	
	Bonamia linearis	
	Bonamia pilbarensis	
	Evolvulus sp.	
	Ipomoea muelleri	
	Operculina aequisepala	
	Polymeria ambigua	
Cucurbitaceae	*Cucumis variabilis*	
Cyperaceae	*Bulbostylis barbata*	
	Cyperus conicus	
	Cyperus sp.	
	Cyperus vaginatus	
Elatinaceae	*Bergia trimera*	
Euphorbiaceae	*Euphorbia australis* var. *subtomentosa*	
	Euphorbia tannensis subsp. *eremophila*	
	Euphorbia trigonosperma	
	Microstachys chamaelea	

Appendix A: Flora Inventory

Family	Taxa	Status
Fabaceae	*Acacia acradenia*	
	Acacia adoxa var. *adoxa*	
	Acacia ampliceps	
	Acacia ancistrocarpa	
	Acacia bivenosa	
	Acacia colei var. *colei*	
	Acacia coriacea subsp. *pendens*	
	Acacia inaequilatera	
	Acacia orthocarpa	
	Acacia pyrifolia var. *pyrifolia*	
	Acacia sericophylla	
	Acacia sp.	
	Acacia sphaerostachya	
	Acacia stellaticeps	
	Acacia synchronicia	
	Acacia trachycarpa	
	Acacia trachycarpa x tumida var. *pilbarensis*	
	Acacia tumida var. *pilbarensis*	
	Cajanus pubescens	
	Crotalaria cunninghamii subsp. *sturtii*	
	Crotalaria ramosissima	
	Cullen leucanthum	
	Indigofera hirsuta	
	Indigofera linnaei	
	Indigofera monophylla	
	Indigofera oblongifolia	Weed
	Isotropis atropurpurea	
	Neptunia dimorphantha	
	Neptunia sp.	
	Petalostylis cassioides	
	Petalostylis labicheoides	
	Rhynchosia minima	
	Senna artemisioides subsp. *helmsii*	
	Senna glutinosa subsp. *glutinosa*	
	Senna notabilis	
	Senna symonii	
	Senna venusta	
	Sesbania formosa	
	Tephrosia ?supina	
	Tephrosia rosea subsp. Port Hedland (A.S. George 1114)	P1
	Tephrosia rosea var. *clementii*	
	Tephrosia rosea var. Fortescue creeks (M.I.H. Brooker 2186)	
	Tephrosia sp. Bungaroo Creek (M.E. Trudgen 11601)	
	Vachellia farnesiana	Weed
	Vigna lanceolata var. *lanceolata*	
Goodeniaceae	*Goodenia lamprosperma*	
	Goodenia muelleriana	

Appendix A: Flora Inventory

Family	Taxa	Status
Goodeniaceae	*Goodenia stobbsiana*	
	Scaevola browniana	
	Scaevola spinescens	
Gyrostemonaceae	*Codonocarpus cotinifolius*	
Gyrostemonaceae	*Gyrostemon tepperi*	
Hemerocallidaceae	*Corynotheca sp.*	
Lauraceae	*Cassytha capillaris*	
Malvaceae	*Abutilon lepidum*	
	Corchorus incanus subsp. *incanus*	
	Corchorus laniflorus	
	Corchorus sp.	
	Hibiscus austrinus var. *austrinus*	
	Malvaceae sp.	
	Malvastrum americanum	Weed
	Sida clementii	
	Sida sp.	
	Sida sp. Pilbara (A.A. Mitchell PRP 1543)	
	Sida sp. Pindan (B.G. Thomson 3398)	
	Triumfetta clementii	
	Triumfetta sp.	
	Waltheria indica	
Meliaceae	*Azadirachta indica*	Weed
	Owenia reticulata	
Menispermaceae	*Tinospora smilacina*	
Molluginaceae	*Glinus lotoides*	
Moraceae	*Ficus aculeata* var. *indecora*	
	Ficus brachypoda	
	Ficus aculeata	
Myrtaceae	*Corymbia candida* subsp. *candida*	
	Corymbia candida subsp. *indet.*	
	Corymbia deserticola	
	Corymbia flavescens	
	Corymbia hamersleyana	
	Corymbia zygophylla	
	Eucalyptus camaldulensis subsp. *refulgens*	
	Eucalyptus victrix	
	Melaleuca argentea	
	Melaleuca glomerata	
Nyctaginaceae	*Boerhavia repleta*	
	Boerhavia sp.	
Passifloraceae	*Passiflora foetida*	Weed
Phyllanthaceae	*Nellica maderaspatensis*	
	Notoleptopus decaisnei	
Plantaginaceae	*Stemodia grossa*	
	Stemodia viscosa	
Poaceae	*Aristida holathera* var. *holathera*	
	Cenchrus ciliaris	Weed

Appendix A: Flora Inventory

Family	Taxa	Status
Poaceae	*Chrysopogon fallax*	
	Cymbopogon ambiguus	
	Cymbopogon sp.	
	Eragrostis eriopoda	
	Eragrostis speciosa	
	Eriachne lanata	
	Eriachne mucronata	
	Eriachne obtusa	
	Eulalia aurea	
	Paraneurachne muelleri	
	Poaceae sp.	
	Sporobolus australasicus	
	Themeda triandra	
	Triodia epactia	
	Triodia secunda	
	Triodia sp.	
	Triodia wiseana	
Proteaceae	*Grevillea pyramidalis* subsp. *leucadendron*	
	Grevillea wickhamii subsp. *hispidula*	
	Hakea lorea subsp. *lorea*	
Pteridaceae	*Cheilanthes* sp.	
Rubiaceae	*Dentella asperata*	
Santalaceae	*Santalum lanceolatum*	
Sapindaceae	*Atalaya hemiglauca*	
Scrophulariaceae	*Eremophila longifolia*	
Solanaceae	*Solanum diversiflorum*	
	Solanum horridum	
	Solanum lasiophyllum	
	Solanum sp.	
Violaceae	*?Afrohybanthus* sp.	
	Afrohybanthus aurantiacus

Threatened and Priority Flora Report Form

Version 1.3 August 2017

Please complete as much of the form as possible, with emphasis on those sections bordered in black. For information on how to complete the form please refer to the Threatened & Priority Flora Report Form (TPRF) manual on the DBCA website at http://dpaw.wa.gov.au/ under *Standard Report Forms*

TAXON: Gymnanthera cunninghamii **TPFL Pop. No:** ____

OBSERVATION DATE: 10/03/2024 **CONSERVATION STATUS:** P3 New population ☐

OBSERVER/S: Jack Hardie, Grant Buller **PHONE:** ____

ROLE: Botanists **ORGANISATION:** SLR Consulting

DESCRIPTION OF LOCATION (Provide at least nearest town/named locality, and the distance and direction to that place):

Devil Creek, 37km east of South Hedland

Reserve No: ____

DBCA DISTRICT: Pilbara **LGA:** Port Hedland Land manager present: ☐

DATUM:
GDA94 / MGA94 ☒
AGD84 / AMG84 ☐
WGS84 ☐
Unknown ☐

COORDINATES: (If UTM coords provided, **Zone** is also required)
DecDegrees ☐ DegMinSec ☐ UTMs ☒

Lat / Northing: 705557

Long / Easting: 7743392

ZONE: 50

METHOD USED:
GPS ☒ Differential GPS ☐ Map ☐

No. satellites: ___ Map used: ____

Boundary polygon captured: ☐ Map scale: ____

LAND TENURE:

Nature reserve ☐	Timber reserve ☐	Private property ☐	Rail reserve ☐	Shire road reserve ☐
National park ☐	State forest ☐	Pastoral lease ☒	MRWA road reserve ☐	Other Crown reserve ☐
Conservation park ☐	Water reserve ☐	UCL ☐	SLK/Pole ____ to ____	Specify other: ____

AREA ASSESSMENT: Edge survey ☐ Partial survey ☒ Full survey ☐ Area observed (m²): ____

EFFORT: Time spent surveying (minutes): ____ No. of minutes spent / 100 m²: ____

POP'N COUNT ACCURACY: Actual ☒ Extrapolation ☐ Estimate ☐ Count method: (Refer to field manual for list) Actual count - individuals

WHAT COUNTED: Plants ☒ Clumps ☐ Clonal stems ☐

TOTAL POP'N STRUCTURE:

	Mature:	Juveniles:	Seedlings:	Totals:
Alive		3		3
Dead				

Area of pop (m²): ____

Note: Pls record count as numbers (not percentages) for database.

QUADRATS PRESENT: No. ___ Size ____ Data attached ☐ Total area of quadrats (m²): ____

Summary Quad. Totals: Alive				

REPRODUCTIVE STATE: Clonal ☐ Vegetative ☒ Flowerbud ☐ Flower ☐
Immature fruit ☐ Fruit ☐ Dehisced fruit ☐ Percentage in flower: ____%

CONDITION OF PLANTS: Healthy ☒ Moderate ☐ Poor ☐ Senescent ☐

COMMENT:

THREATS - type, agent and supporting information: Eg clearing, too frequent fire, weed, disease. Refer to field manual for list of threats & agents. **Specify agent** where relevant. Rate current and potential threat impact: N=Nil, L=Low, M=Medium, H=High, E=Extreme Estimate time to potential impact: S=Short (<12mths), M=Medium (<5yrs), L=Long (5yrs+)	**Current impact (N-E)**	**Potential Impact (L-E)**	**Potential Threat Onset (S-L)**
• Pastoralism/livestock	N	M	L
• Clearing (clearing was observed on the eastern bank several hundred metres south of record location)	N	L	L
•	____	____	____

Please return completed form to **Species And Communities Branch** DBCA,
Locked Bag 104, BENTLEY DELIVERY CENTRE WA 6983 **OR** email to: flora.data@dbca.wa.gov.au
RECORDS: Please forward to **Flora Administrative Officer.** Species and Communities Branch.

GOVERNMENT OF WESTERN AUSTRALIA

Threatened and Priority Flora Report Form

Version 1.3 August 2017

HABITAT INFORMATION:

LANDFORM:
Crest ☐
Hill ☐
Ridge ☐
Outcrop ☐
Slope ☐
Flat ☒
Open depression ☐
Drainage line ☒
Closed depression ☐
Wetland ☐

ROCK TYPE:
Granite ☐
Dolerite ☐
Laterite ☐
Ironstone ☐
Limestone ☐
Quartz ☐
Specify other: ____

LOOSE ROCK: (on soil surface; eg gravel, quartz fields)
0-10% ☐
10-30% ☐
30-50% ☐
50-100% ☐

SOIL TYPE:
Sand ☒
Sandy loam ☐
Loam ☐
Clay loam ☐
Light clay ☐
Peat ☐
Specify other: ____

SOIL COLOUR:
Red ☐
Brown ☐
Yellow ☒
White ☐
Grey ☐
Black ☐
Specify other: ____

DRAINAGE:
Well drained ☐
Seasonally inundated ☐
Permanently inundated ☐
Tidal ☐

Specific **Landform** Element: ____
(Refer to field manual for additional values)

CONDITION OF SOIL: Dry ☐ Moist ☐ Waterlogged ☐ Inundated ☐

VEGETATION CLASSIFICATION*:
Eg: **1.** Banksia woodland (B. attenuata, B. ilicifolia); **2.** Open shrubland (Hibbertia sp., Acacia spp.) ; **3.** Isolated clumps of sedges (Mesomelaena tetragona)

1. Eucalyptus camaldulensis subsp. refulgens, Melaleuca argentea low open woodland
2. Acacia trachycarpa, Melaleuca glomerata mid isolated shrubs
3. Eulalia aurea, *Cenchrus ciliaris low isolated clumps of grasses
4.

ASSOCIATED SPECIES:

Other (non-dominant) spp

* Please record up to four of the most representative vegetation layers (with up to three dominant species in each layer). Structural Formations should follow 2009 *Australian Soil and Land Survey Field Handbook* guidelines – refer to field manual for further information and structural formation table.

CONDITION OF HABITAT: Pristine ☐ Excellent ☐ Very good ☐ Good ☒ Degraded ☐ Completely degraded ☐

COMMENT:

FIRE HISTORY: **Last Fire:** Season/Month: _____ Year: _____ **Fire Intensity:** High ☐ Medium ☐ Low ☐ No signs of fire ☐

FENCING: Not required ☐ Present ☐ Replace / repair ☐ Required ☐ Length req'd: ____

ROADSIDE MARKERS: Not required ☐ Present ☐ Replace / reposition ☐ Required ☒ Quantity req'd: ____

OTHER COMMENTS: (Please include recommended management actions and/or implemented actions - include date. Also include details of additional data available, and how to locate it.)

DRF PERMIT/ LICENCE No: Note if only observing plants (i.e. no specimens or plant matieral is taken) then no permit/licence is required. For further information on permit and licening requirements see the Threatened Flora and Wildlife Licensing pages on DBCA's website. Any actions carried out under licence/permit should be recorded above in the OTHER COMMENTS section.

SPECIMEN: Collectors No: _____ WA Herb. ☐ Regional Herb. ☐ District Herb. ☐ Other: _____

ATTACHED: Map ☐ Mudmap ☐ Photo ☐ GIS data ☐ Field notes ☐ Other: _____

COPY SENT TO: Regional Office ☐ District Office ☐ Other:

Submitter of Record: Grant Buller Role: Senior Botanist Signed: _____ Date: 8/07/2024

Grey ☐
Black ☐
Specify other: ____

DRAINAGE:
Well drained ☐
Seasonally inundated ☐
Permanently inundated ☐
Tidal ☐

Specific **Landform** Element: ____
(Refer to field manual for additional values)

CONDITION OF SOIL: Dry ☐ Moist ☐ Waterlogged ☐ Inundated ☐

VEGETATION CLASSIFICATION*:
Eg: **1.** Banksia woodland (B. attenuata, B. ilicifolia); **2.** Open shrubland (Hibbertia sp., Acacia spp.) ; **3.** Isolated clumps of sedges (Mesomelaena tetragona)

1. Acacia stellaticeps low open shrubland
2. Triodia epactia low hummock grassland
3.
4.

ASSOCIATED SPECIES:
Other (non-dominant) spp

* Please record up to four of the most representative vegetation layers (with up to three dominant species in each layer). Structural Formations should follow 2009 *Australian Soil and Land Survey Field Handbook* guidelines – refer to field manual for further information and structural formation table.

CONDITION OF HABITAT: Pristine ☐ Excellent ☐ Very good ☐ Good ☐ Degraded ☒ Completely degraded ☐

COMMENT: Recorded in roadside drain, surrounding habitat in Very Good condition

FIRE HISTORY: **Last Fire:** Season/Month: _____ Year: _____ **Fire Intensity:** High ☐ Medium ☐ Low ☐ No signs of fire ☐

FENCING: Not required ☐ Present ☐ Replace / repair ☐ Required ☐ Length req'd: ____

ROADSIDE MARKERS: Not required ☐ Present ☐ Replace / reposition ☐ Required ☒ Quantity req'd: ____

OTHER COMMENTS: (Please include recommended management actions and/or implemented actions - include date. Also include details of additional data available, and how to locate it.)

DRF PERMIT/ LICENCE No: Note if only observing plants (i.e. no specimens or plant matieral is taken) then no permit/licence is required. For further information on permit and licening requirements see the Threatened Flora and Wildlife Licensing pages on DBCA's website. Any actions carried out under licence/permit should be recorded above in the OTHER COMMENTS section.

SPECIMEN: Collectors No: _____ WA Herb. ☐ Regional Herb. ☐ District Herb. ☐ Other: _____

ATTACHED: Map ☐ Mudmap ☐ Photo ☐ GIS data ☐ Field notes ☐ Other: _____

COPY SENT TO: Regional Office ☐ District Office ☐ Other:

Submitter of Record: Grant Buller Role: Senior Botanist Signed: _____ Date: 8/07/2024

Please return completed form to **Species And Communities Branch** DBCA,
Locked Bag 104, BENTLEY DELIVERY CENTRE WA 6983 **OR** email to: flora.data@dbca.wa.gov.au
RECORDS: Please forward to **Flora Administrative Officer.** Species and Communities Branch.

Atlas Ridley Magnetite Project Connection

Flora and Fauna Survey Technical Report

Horizon Power

SLR Project No.: 675.072189.00001

29 July 2024

FLORA SITE SHEET

Project Name	Atlas Ridley Biological Survey			
Site:	AR01			
Location	MGA 50	660017 **mE**	7740884 **mN**	
Described by:	GB,JH			
Date:	1-03-2024			
Type:	QUADRAT			
Landform:	PlainFlat			
Slope:	N/A			
Rock Type:	N/A			
Soil Type:	Sand			
Soil Colour:	Orange			

Vegetation: *Pluchea ferdinandi-muelleri and P. dentex low isolated shrubs over Triodia epactia and T. secunda low open hummock grassland.*

Condition: Very Good **Disturbance Type:** Infrastructure
Fire Age: >10 years

SPECIES LIST

Taxon	Height (cm)	Cover (%)	Notes
Pluchea dentex	20	0.1	
Pluchea ferdinandi-muelleri	50	0.1	
Triodia epactia	30	40	
Triodia secunda	30	5	

FLORA SITE SHEET

Project Name	Atlas Ridley Biological Survey		
Site:	AR02		
Location	MGA 50	659628 **mE**	7740921 **mN**
Described by:	GB,JH		
Date:	1-03-2024		
Type:	QUADRAT		
Landform:	PlainsFlat		
Slope:	N/A		
Rock Type:	N/A		
Soil Type:	Sand		
Soil Colour:	Orange		

Vegetation: *Eucalyptus victrix and Corymbia candida subsp. candida low isolated trees over Acacia stellaticeps, A. colei var. colei and Hakea lorea subsp. lorea low sparse shrubland over Triodia epactia low open hummock grassland.*

Condition:	Excellent	**Disturbance Type:**	None
Fire Age:	>10 years		

SPECIES LIST

Taxon	Height (cm)	Cover (%)	Notes
Acacia colei var. colei	160	0.1	
Acacia stellaticeps	45	20	
Cassytha capillaris	10	0.1	
Corymbia candida subsp. candida	250	0.1	
Eucalyptus victrix	500	0.1	
Hakea lorea subsp. lorea	60	0.1	
Pluchea dentex	30	0.1	
Sida sp. Pilbara (A.A. Mitchell PRP 1543)	30	0.1	
Triodia epactia	30	31	

FLORA SITE SHEET

Chrysopogon fallax	40	2	
Triodia sp.	20	3	

FLORA SITE SHEET

Project Name Atlas Ridley Biological Survey
Site: AR23
Location MGA 50 670584 **mE** 7738164 **mN**

Described by: GB,JH
Date: 4-03-2024
Type: QUADRAT

Landform: Plains
Slope: Flat
Rock Type: N/A
Soil Type: Clay,Sand
Soil Colour: Brown,Orange

Vegetation: *Corymbia hamersleyana low open woodland over Melaleuca glomerata, Acacia colei var. colei and Carissa lanceolata mid sparse shrubland over Triodia epactia and T. sp. low sparse hummock grassland.*

Condition: Very Good **Disturbance Type:** Infrastructure
Fire Age: > 5 years,>10 years

SPECIES LIST

Taxon	Height (cm)	Cover (%)	Notes
Acacia ancistrocarpa	150	0.1	
Acacia colei var. colei	200	0.5	
Acacia coriacea subsp. pendens	140	0.1	
Acacia inaequilatera	170	0.1	
Carissa lanceolata	200	0.5

**Cenchrus ciliaris*	30	0.1	
Cheilanthes sp.	10	0.1	
Eriachne mucronata	30	0.1	
Ficus brachypoda	350	0.5	
Solanum horridum	30	0.1	
Triodia epactia	30	15	

FLORA SITE SHEET

Project Name Atlas Ridley Biological Survey
Site: AR45
Location MGA 50 717145 **mE** 7749312 **mN**

Described by: GB,JH
Date: 7-03-2024
Type: RELEVE

Landform: Ironstone hilltop
Slope: Moderate
Rock Type: Ironstone
Soil Type: Gravel
Soil Colour: Orange

Vegetation: *Acacia inaequilatera tall isolated clumps of shrubs over A. stellaticeps low isolated clumps of shrubs over Triodia epactia low open hummock grassland.*

Condition: Very Good **Disturbance Type:** Infrastructure
Fire Age: >10 years

SPECIES LIST

Taxon	Height (cm)	Cover (%)	Notes
Acacia inaequilatera	350	0.5	
Acacia stellaticeps	30	0.5	
Acacia tumida var. pilbarensis	100	0.1	
Triodia epactia	30	29

Gekkonidae	*Gehyra punctata*	Spotted Pilbara Rock Dtella	-	-	x													x
Gekkonidae	*Gehyra purpurascens*	-	-	-	x													
Gekkonidae	*Gehyra variegata*	Variegated Gehyra	-	-	x				x		x							x
Gekkonidae	*Hemidactylus frenatus*	Asian House Gecko	-	-	x													
Gekkonidae	*Heteronotia binoei*	Bynoe's Gecko	-	-	x				x		x							x
Gekkonidae	*Heteronotia spelea*	Pilbara Cave Gecko	-	-	x													
Homalopsidae	*Fordonia leucobalia*	White-bellied Mangrove Snake	-	-	x													
Pygopodidae	*Delma borea*	Rusty-topped Delma	-	-	x													
Pygopodidae	*Delma butleri*	Spinifex Delma	-	-	x				x									
Pygopodidae	*Delma desmosa*	-	-	-	x				x									
Pygopodidae	*Delma nasuta*	Sharp-snouted Delma	-	-	x													
Pygopodidae	*Delma pax*	Peaceful Delma	-	-	x				x		x							x
Pygopodidae	*Delma tincta*	Excitable Delma	-	-	x				x		x							
Pygopodidae	*Lialis burtonis*	Burton's Snake-lizard	-	-	x			x	x									x
Pygopodidae	*Pygopus nigriceps*	Western Hooded Scaly-foot	-	-	x				x									
Pythonidae	*Antaresia childreni*	Children's Python	-	-	x				x									x
Pythonidae	*Antaresia perthensis*	Pygmy Python	-	-	x				x									
Pythonidae	*Aspidites melanocephalus*	Black-headed Python	-	-	x				x	x	x							
Pythonidae	*Aspidites ramsayi*	Woma	P1 (southwest subpop.)	-	x													
Pythonidae	*Liasis olivaceus barroni*	Pilbara Olive Python	VU	VU	x	x	x		x									
Scincidae	*Carlia munda*	Shaded-litter Rainbow-skink	-	-	x													x
Scincidae	*Carlia triacantha*	Desert Rainbow Skink	-	-	x				x		x							x
Scincidae	*Cryptoblepharus buchananii*	Buchanan's Snake-eyed Skink	-	-	x													
Scincidae	*Cryptoblepharus plagiocephalus*	Péron's Snake-eyed Skink	-	-	x													x
Scincidae	*Cryptoblepharus ustulatus*	Russet Snake-eyed Skink	-	-	x													
Scincidae	*Ctenotus angusticeps*	Northwestern Coastal Ctenotus	P3	-	x		x											
Scincidae	*Ctenotus duricola*	Eastern Pilbara Lined Ctenotus	-	-	x				x	x	x							
Scincidae	*Ctenotus dux*	-	-	-	x													
Scincidae	*Ctenotus grandis*	Grand Ctenotus	-	-	x			x	x	x	x							x
Scincidae	*Ctenotus hanloni*	Nimble Ctenotus	-	-	x				x		x							
Scincidae	*Ctenotus helenae*	Clay-soil Ctenotus	-	-	x				x		x							x
Scincidae	*Ctenotus pantherinus*	Leopard Ctenotus	-	-	x				x	x	x							x
Scincidae	*Ctenotus piankai*	Coarse Sands Ctenotus	-	-	x				x		x							
Scincidae	*Ctenotus rufescens*	Rufous Finesnout Ctenotus	-	-	x						x							
Scincidae	*Ctenotus saxatilis*	Rock Ctenotus	-	-	x			x	x	x	x							x
Scincidae	*Ctenotus schomburgkii*	Barred Wedge-snouted Ctenotus	-	-					x									
Scincidae	*Ctenotus serventyi*	North-western Sandy-loam Ctenotus	-	-	x			x	x		x							
Scincidae	*Ctenotus superciliaris*	Sharp-browed Ctenotus	-	-					x									
Scincidae	*Cyclodomorphus melanops*	Spinifex Slender Blue-tongue	-	-					x									x
Scincidae	*Egernia cygnitos*	Western Pilbara Spiny-tailed Skink	-	-	x													
Scincidae	*Egernia depressa*	Southern Pygmy Spiny-tailed Skink	-	-	x													

Scincidae	*Egernia epsisolus*	Eastern Pilbara Spiny-tailed Skink	-	-	x			x	x	x									
Scincidae	*Eremiascincus isolepis*	Northern Bar-lipped Skink	-	-	x														
Scincidae	*Eremiascincus musivus*	Mosaic Desert Skink	-	-	x														
Scincidae	*Eremiascincus pallidus*	Western Narrow-banded Skink	-	-	x														
Scincidae	*Eremiascincus richardsonii*	Broad-banded Sand Swimmer	-	-	x														
Scincidae	*Lerista bipes*	North-western Sandslider	-	-	x				x		x								x
Scincidae	*Lerista clara*	Sharp-blazed Three-toed Slider	-	-	x				x										
Scincidae	*Lerista jacksoni*	Jackson's Three-toed Slider	-	-	x														
Scincidae	*Lerista muelleri*	Wood Mulch-slider	-	-	x														x
Scincidae	*Lerista timida*	Timid Slider	-	-					x										
Scincidae	*Menetia greyii*	Common Dwarf Skink	-	-	x				x		x								x
Scincidae	*Menetia surda*	Western Dwarf Skink	-	-					x										
Scincidae	*Morethia ruficauda exquisita*	Lined Fire-tailed Skink	-	-	x														x
Scincidae	*Morethia ruficauda ruficauda*	Lined Fire-tailed Skink	-	-	x			x	x		x		x						
Scincidae	*Notoscincus butleri*	Lined Soil-crevice Skink	P4	-															x
Scincidae	*Notoscincus ornatus ornatus*	Ornate Soil-crevice Skink	-	-	x														x
Scincidae	*Proablepharus reginae*	Western Soil-crevice Skink	-	-	x														x
Scincidae	*Tiliqua multifasciata*	Central Blue-tongue	-	-	x			x	x	x									x
Typhlopidae	*Anilios ammodytes*	Pilbara Blind Snake	-	-	x				x										
Typhlopidae	*Anilios grypus*	Long-beaked Blind Snake	-	-	x				x		x								
Typhlopidae	*Anilios pilbarensis*	Pilbara Hook-snouted Blind Snake	-	-	x						x								
Varanidae	*Varanus acanthurus*	Spiny-tailed Goanna	-	-	x			x	x		x								x
Varanidae	*Varanus brevicauda*	Short-tailed Pygmy Goanna	-	-	x				x		x								x
Varanidae	*Varanus bushi*	Pilbara Mulga Goanna	-	-	x														
Varanidae	*Varanus eremius*	Pygmy Desert Goanna	-	-	x				x		x								x
Varanidae	*Varanus giganteus*	Perentie	-	-	x				x				x						
Varanidae	*Varanus gouldii*	Bungarra Or Sand Goanna	-	-	x			x	x		x								x
Varanidae	*Varanus panoptes*	Yellow-Spotted Monitor	-	-	x			x			x								x
Varanidae	*Varanus pilbarensis*	Northern Pilbara Rock Goanna	-	-	x				x										x
Varanidae	*Varanus tristis*	Racehorse Goanna	-	-															x

Appendix I Fauna Site Sheets

Atlas Ridley Magnetite Project Connection

Flora and Fauna Survey Technical Report

Horizon Power

SLR Project No.: 675.072189.00001

29 July 2024

675.072189-BAT-1

Project:	675.072189				
Date	1-03-2024		Sample Type	ARU	
Zone	50	Easting	690876	Northing	7740452

Landform and Soil		Rock	
Landform	Outcrop/breakaway	Rock type/s	Quartz
Aspect	West	Surface stone cover	75 - 100%
Soil type	Sand	Surface stone size classes present	Pebbles (<0.6 cm), Small Stones (0.6 - 2 cm), Stones (2 - 6 cm), Small Rocks (6 - 20 cm), Rocks (20 - 60 cm), Big Rocks (60 cm - 2 m), Boulders (>2 m)
Soil colour	Red		
Condition		**Habitat Features**	
Quality	Very good	Water Source	Absent
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Exfoliating rock, Hummocks, Rock crevices
Disturbance	None observed		
Introduced fauna	None observed	Ground Cover	76-100%

Vegetation			
Upper stratum	Absent		
Mid stratum	Low (0.5-1 m)	Sparse shrubland and/or heathland (0.25-20%)	*Acacia colei*
Ground stratum	Low (>0.5 m)	Sparse hummock grassland (0.25-20%)	*Triodia sp.*

Fulcrum photo ID	3e20cbbb-6a6b-4f2b-8d6a-e7865c62b5f0

675.072189-BAT-2

Project:	675.072189				
Date	1-03-2024		Sample Type	ARU	
Zone	50	Easting	701623	Northing	7740708.5

Landform and Soil		Rock	
Landform	Plain	Rock type/s	Granite
Aspect	Negligible	Surface stone cover	75 - 100%
Soil type	Sand	Surface stone size classes present	Pebbles (<0.6 cm), Small Stones (0.6 - 2 cm), Stones (2 - 6 cm), Rocks (20 - 60 cm), Big Rocks (60 cm - 2 m), Boulders (>2 m), Small Rocks (6 - 20 cm)
Soil colour	Orange		
Condition		**Habitat Features**	
Quality	High quality	Water Source	Absent
Fire History	Burnt (1-5 years)	Microhabitats	Exfoliating rock, Hummocks, Leaf litter, Rock crevices, Termite mounds, Woody debris
Disturbance	None observed		
Introduced fauna	None observed	Ground Cover	26-50%

Vegetation			
Upper stratum	Absent		
Mid stratum	Mid (1-2 m)	Sparse shrubland and/or heathland (0.25-20%)	*Acacia sp.*
Ground stratum	Low (>0.5 m)	Closed hummock grassland (>80%)	*Triodia epactia*

Fulcrum photo ID	62505859-d69d-424a-b438-073c23ab4962

675.072189-BAT-3

Project:	675.072189				
Date	2-03-2024		Sample Type	ARU	
Zone	50	Easting	716968	Northing	7749334

Landform and Soil		Rock	
Landform	Outcrop/breakaway	Rock type/s	Granite, Ironstone, Quartz
Aspect	North	Surface stone cover	50 - 75%
Soil type	Sand	Surface stone size classes present	Small Stones (0.6 - 2 cm), Stones (2 - 6 cm), Small Rocks (6 - 20 cm), Rocks (20 - 60 cm), Big Rocks (60 cm - 2 m)
Soil colour	Red		
Condition		**Habitat Features**	
Quality	Good	Water Source	Absent
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Caves, Exfoliating rock, Hummocks, Rock crevices
Disturbance	Overgrazing		
Introduced fauna	Cattle	Ground Cover	

Vegetation			
Upper stratum	Absent		
Mid stratum	Absent		
Ground stratum	Low (>0.5 m)	Open hummock grassland (20-50%)	*Triodia epactia*

Fulcrum photo ID	86a89a3c-39c7-47cb-9440-9df6551d1eea

675.072189-BAT-4

Project:	675.072189				
Date	2-03-2024		Sample Type	ARU	
Zone	50	Easting	719953	Northing	7754956.3

Landform and Soil		Rock	
Landform	Outcrop/breakaway	Rock type/s	Granite
Aspect	West	Surface stone cover	75 - 100%
Soil type	Rock	Surface stone size classes present	Pebbles (<0.6 cm), Small Stones (0.6 - 2 cm), Stones (2 - 6 cm), Rocks (20 - 60 cm), Big Rocks (60 cm - 2 m), Boulders (>2 m), Small Rocks (6 - 20 cm)
Soil colour	Orange		
Condition		**Habitat Features**	
Quality	High quality	Water Source	Absent
Fire History	Burnt (1-5 years)	Microhabitats	Caves, Exfoliating rock, Hummocks, Leaf litter, Peeling bark, Rock crevices, Woody debris
Disturbance	None observed		
Introduced fauna	None observed	Ground Cover	11-25%

Vegetation			
Upper stratum	Low (<10 m)	Isolated trees (<0.25%)	*Atalaya hemiglauca and Ficus brachypoda*
Mid stratum	Low (0.5-1 m)	Open shrubland and/or heathland (20-50%)	*Atalaya hemiglauca and Ficus brachypoda*
Ground stratum	Low (>0.5 m)	Sparse hummock grassland (0.25-20%)	*Triodia sp.*

Fulcrum photo ID	7b5335c9-98ff-40b2-8b96-9c27e29db566

675.072189-BAT-5

Project:	675.072189				
Date	2-03-2024		Sample Type	ARU	
Zone	50	Easting	705916	Northing	7742518

Landform and Soil		Rock	
Landform	Drainage line	Rock type/s	None
Aspect	Negligible	Surface stone cover	
Soil type	Sand	Surface stone size classes present	
Soil colour	Red		
Condition		**Habitat Features**	
Quality	Good	Water Source	Absent
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Hummocks, Leaf litter
Disturbance	None observed		
Introduced fauna	None observed	Ground Cover	

Vegetation			
Upper stratum	Low (<10 m)	Open woodland (0.25-20%)	*Eucalyptus melaleuca*
Mid stratum	Mid (1-2 m)	Open shrubland and/or heathland (20-50%)	*Acacia sp.*
Ground stratum	Low (>0.5 m)	Open hummock grassland (20-50%)	*Triodia epactia*

Fulcrum photo ID	39731cc9-60a3-4bcd-936c-6e4f11664eb3

675.072189-BIL-6

Project:	675.072189				
Date	3-03-2024		Sample Type	Bilby Search	
Zone	50	Easting	667478	Northing	7736632.3

Landform and Soil		Rock	
Landform	Plain	Rock type/s	None
Aspect	Negligible	Surface stone cover	
Soil type	Sandy loam	Surface stone size classes present	
Soil colour	Orange		
Condition		**Habitat Features**	
Quality	Very good	Water Source	Absent
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Caves, Hollows - logs, Hollows - trees, Hummocks, Leaf litter, Peeling bark, Woody debris
Disturbance	Vehicle tracks		
Introduced fauna	None observed	Ground Cover	51-75%

Vegetation			
Upper stratum	Low (<10 m)	Open woodland (0.25-20%)	*Eucalyptus victrix*
Mid stratum	Mid (1-2 m)	Sparse shrubland and/or heathland (0.25-20%)	*Eucalyptus victrix*
Ground stratum	Low (>0.5 m)	Open hummock grassland (20-50%)	*Triodia epactia*

Fulcrum photo ID	3ac6a6bf-cb3f-4392-8979-f6ce998c7fe5

675.072189-BIL-7

Project:	675.072189				
Date	4-03-2024		Sample Type	Bilby Search	
Zone	50	Easting	718934	Northing	7752705

Landform and Soil		Rock	
Landform	Plain	Rock type/s	None
Aspect	Negligible	Surface stone cover	
Soil type	Sand	Surface stone size classes present	
Soil colour	Red		
Condition		**Habitat Features**	
Quality	Good	Water Source	Present
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Hummocks
Disturbance	None observed		
Introduced fauna	Cattle	Ground Cover	51-75%

Vegetation

Upper stratum	Absent		
Mid stratum	Absent		
Ground stratum	Low (>0.5 m)	Hummock grassland (50-80%)	*Triodia secunda Acacia stellaticeps*

Fulcrum photo ID	107d370e-5367-4d15-b434-84d3e61495b5,e61fe2c6-8666-467b-

Date	2-03-2024		Sample Type	Camera Trap	
Zone	50	Easting	717065	Northing	7749310.3

Landform and Soil		Rock	
Landform	Outcrop/breakaway	Rock type/s	Granite, Ironstone, Quartz
Aspect	North	Surface stone cover	50 - 75%
Soil type	Sand	Surface stone size classes present	Small Stones (0.6 - 2 cm), Stones (2 - 6 cm), Small Rocks (6 - 20 cm), Rocks (20 - 60 cm), Big Rocks (60 cm - 2 m)
Soil colour	Red		
Condition		**Habitat Features**	
Quality	Good	Water Source	Absent
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Caves, Exfoliating rock, Hummocks, Rock crevices
Disturbance	Overgrazing		
Introduced fauna	Cattle	Ground Cover	

Vegetation			
Upper stratum	Absent		
Mid stratum	Absent		
Ground stratum	Low (>0.5 m)	Open hummock grassland (20-50%)	*Triodia epactia*

Fulcrum photo ID	88ac542d-9fc3-4340-9fb7-7e5f6f50eef1

675.072189-CAM-39

Project:	675.072189				
Date	2-03-2024		Sample Type	Camera Trap	
Zone	50	Easting	705838	Northing	7742778

Landform and Soil		Rock	
Landform	Drainage line	Rock type/s	None
Aspect	North	Surface stone cover	
Soil type	Sand	Surface stone size classes present	
Soil colour	White, Yellow		
Condition		**Habitat Features**	
Quality	Disturbed	Water Source	
Fire History	Unknown	Microhabitats	Hollows - logs, Hollows - trees, Hummocks, Leaf litter, Woody debris
Disturbance	Vehicle tracks		
Introduced fauna	None observed	Ground Cover	26-50%

Vegetation			
Upper stratum	Low (<10 m)	Woodland (20-50%)	*Acacia cyperophylla, Paper bark*
Mid stratum	Mid (1-2 m)	Open shrubland and/or heathland (20-50%)	*Acacia sp.*
Ground stratum	Low (>0.5 m)	Open hummock grassland (20-50%)	*Triodia epactia*

Fulcrum photo ID	2259cceb-db1c-4f76-869e-73319d6085c0

Date	5-03-2024		Sample Type	Habitat Assessment	
Zone	50	Easting	691697	Northing	7741118

Landform and Soil		Rock	
Landform	Plain	Rock type/s	None
Aspect	Negligible	Surface stone cover	
Soil type	Clay loam	Surface stone size classes present	
Soil colour	Orange		
Condition		**Habitat Features**	
Quality	Very good	Water Source	Absent
Fire History	Little or no fire evidence (>5 years)	Microhabitats	Termite mounds, Woody debris, Peeling bark, Logs > 10 cm, Hummocks, Burrows
Disturbance	Vehicle tracks		
Introduced fauna	None observed	Ground Cover	26-50%

Vegetation			
Upper stratum	Low (<10 m)	Isolated trees (<0.25%)	*Eucalyptus sp.*
Mid stratum	Mid (1-2 m)	Sparse shrubland and/or heathland (0.25-20%)	Acacia sp.
Ground stratum	Absent	Open hummock grassland (20-50%)	*Triodia epactia and Acacia stellaticeps*

Fulcrum photo ID	4134a2fe-344e-4d09-808c-aac01b61eb87

Scincidae	*Ctenotus saxatilis*	Rock Ctenotus										29
Scincidae	*Egernia epsisolus*	Eastern Pilbara Spiny-tailed Skink										5
Scincidae	*Tiliqua multifasciata*	Central Blue-tongue										1
Scincidae	*Morethia ruficauda*	Lined Fire-tailed Skink										1
Varanidae	*Varanus gouldii*	Bungarra Or Sand Goanna				1						4
Varanidae	*Varanus panoptes*	Argus Monitor										3
Varanidae	*Varanus acanthurus*	Spiny-tailed Goanna										9

Appendix K Significant Fauna Likelihood of Occurrence

Atlas Ridley Magnetite Project Connection

Flora and Fauna Survey Technical Report

Horizon Power

SLR Project No.: 675.072189.00001

29 July 2024

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Birds						
Accipitridae	*Erythrotriorchis radiatus* Red Goshawk	VU	EN	Tropical and subtropical open-forests and woodlands dominated by eucalypts and paperbarks along streams and near wetlands (Menkhorst et al., 2017).	No nearby records identified from the database searches or literature.	**Low** No nearby records.
Apodidae	*Apus pacificus* Pacific Swift, Fork-tailed Swift	MI	MI, MA	Low to very high airspace over varied habitat (Pizzey and Knight, 2012).	The DBCA database identified six records within 50 km of the Survey Area, including one record 3.5 km east in 2007 and two records approximately 38 km south in 2022 (DBCA, 2024d).	**Medium** Multiple historic records. Taxon may utilise airspace over the Survey Area.
Charadriidae	*Charadrius leschenaultii* Greater Sand Plover	VU	VU, MI, MA	Wide, sandy, or shelly beaches; sandspits, tidal mudflats, reefs, sand cays, mangroves, saltmarsh, dune wilderness, bare paddocks; seldom far inland (Pizzey and Knight, 2012).	The DBCA database identified 55 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Charadriidae	*Charadrius mongolus* Lesser Sand Plover	EN	EN, MI, MA	Tidal mudflats and sandflats; gently sloping sandy and shelly beaches; saltmarsh, estuaries, atolls, reefs, mangroves, airfield. Occasionally inland on freshwater lakes, swamps, bore drains (Pizzey and Knight, 2012).	The DBCA database identified 34 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Charadriidae	*Charadrius veredus* Oriental Plover	MI	MI, MA	Open plains; bare, rolling country, often far from water; ploughed land; muddy or sandy wastes near inland swamps or tidal flats; bare claypans; margins of coastal marshes; grassy airfields, sports fields, lawns (Pizzey and Knight, 2012).	The DBCA database identified 18 records within 50 km of the Survey Area, including two records 14 km north in 2015 and 2016 (DBCA, 2024d).	**High** Nearby records, and suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Charadriidae	*Pluvialis fulva* Pacific Golden Plover	MI	MI, MA	Estuaries, mudflats, saltmarshes, mangroves; rocky reefs and stranded seaweed on ocean shores; margins of shallow open inland swamps; sewage ponds, short-grass paddocks, sportsground, airfield, ploughed land (Pizzey and Knight, 2012).	The DBCA database identified 24 records within 50 km of Survey Area, including two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Charadriidae	*Pluvialis squatarola* Grey Plover	MI	VU, MI, MA	Mudflats, saltmarsh; tidal reefs and estuaries, rarely inland (Pizzey and Knight, 2012).	The DBCA database identified 30 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Cuculidae	*Cuculus saturatus optatus* Horsfield's Cuckoo	MI	MI, MA	Monsoon forest, rainforest edges; leafy trees in paddocks; river flats, roadsides, mangroves, islands (Pizzey and Knight, 2012).	No nearby records identified from the database searches or literature.	**Low** No nearby records.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Falconidae	*Falco hypoleucos* Grey Falcon	VU	VU	Open plains with treed watercourses in arid inland (Menkhorst et al., 2017).	The DBCA database identified nine records within 50 km of the Survey Area, including 2.9 km north in 2016 and 9 km southwest in 2018 (DBCA, 2024d).	**High** Nearby records, and suitable treed waterourses in arid inland habitat within the Survey Area
Falconidae	*Falco peregrinus* Peregrine Falcon	OS	–	Most environments with suitable nest sites: cliff faces preferred, including man-made ones, commonly uses stick nests built by other species (Menkhorst et al., 2017).	The DBCA database identified seven records within 50 km of the Survey Area, including two records 2.5 and 3 km west in 2012 (DBCA, 2024d).	**High** Nearby Records, and suitable habitat within the Survey Area. May use Survey Area for Hunting.
Fregatidae	*Fregata ariel* Lesser Frigatebird	MI	MI, MA	Oceanic, breed on islands (Pizzey and Knight, 2012).	The DBCA database identified 17 records within 50 km of the Survey Area, including two records 13 and 15 km north in 2016 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Fregatidae	*Fregata minor* Greater Frigatebird	MI	MI, MA	Oceanic, breed on islands (Pizzey and Knight, 2012).	No nearby records identified from the database searches or literature.	**Low** No nearby records and no suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Glareolidae	*Glareola maldivarum* Oriental Pratincole	MI	MI, MA	Plains; shallow wet and dry edges of open bare wetlands; tidal mudflats, beaches (Pizzey and Knight, 2012).	The DBCA database identified 29 records within 50 km of the Survey Area, including one record within the Survey Area in 2004 and 0.2 km from the Survey area in 2013 (DBCA, 2024d).	**Previously Recorded** Recorded within the Survey Area in 2004 and limited suitable open plains and seasonal wetland habitat within the Survey Area.
Hirundinidae	*Hirundo rustica* Barn Swallow	MI	MI, MA	Open country; agricultural land, especially near water; railyards, towns, overhead wires (Pizzey and Knight).	The DBCA database identified 20 records within 50 km of the Survey Area, including 14 km north in 2015 and 8 km north in 2014 (DBCA, 2024d).	**High** Nearby records, and suitable open country and seasonal wetland habitat within the Survey Area.
Laridae	*Anous stolidus* Common Noddy, Brown Noddy	MI	MI, MA	Oceanic; cays, reefs, buoys and piles (Pizzey and Knight, 2012).	No nearby records identified from the database searches or literature.	**Low** No nearby records and no suitable habitat within the Survey Area.
Laridae	*Chlidonias leucopterus* White-winged Black Tern	MI	MI, MA	Large coastal and inland wetland; saltfields, sewage ponds, estuaries, coastal waters (Pizzey and Knight, 2012).	The DBCA database identified 44 records within 50 km of the Survey Area, including 15 km north in 2016 and 3 km north in 2010 (DBCA, 2024d).	**Medium** Nearby records and limited seasonal wetland habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Laridae	*Gelochelidon nilotica* Gull-billed Tern	MI	MI, MA	Coastal, offshore waters; beaches, mudflats, estuaries, larger rivers, reserviors, lakes (Pizzey and Knight, 2012).	The DBCA database identified 45 records within 50 km of the Survey Area, including 0.7 km south in 2004 and 15 km north in 2017 (DBCA, 2024d).	**Medium** Limited major drainage habitat within the Survey Area.
Laridae	*Hydroprogne caspia* Caspian Tern	MI	MI, MA	Coastal, offshore waters; beaches, mudflats, estuaries, larger rivers, reservoirs, lakes. Sometimes found inland (Pizzey and Knight, 2012).	The DBCA database identified 119 records within 50 km of the Survey Area, including two records 3 km north in 2007 and 15 km north in 2017 (DBCA, 2024d).	**Medium** Limited major drainage habitat within the Survey Area.
Laridae	*Onychoprion anaethetus* Bridled Tern	MI	MI, MA	Oceanic, rarely coastal (Pizzey and Knight, 2012).	The DBCA database identified two records within 50 km of the Survey Area, 11.3 km north in 1995 and 13.1 km north in 1995 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Laridae	*Sterna dougallii* Roseate Tern	MI	MI, MA	Offshore waters, islands, coral reefs, sand cays, beaches, tidal inlets (Pizzey and Knight).	The DBCA database identified one record within 50 km of the Survey Area, including 18 km north in 2015 and 12 km north in 2014 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Laridae	*Sterna hirundo* Common Tern	MI	MI, MA	Offshore waters, beaches, reefs, bays, estuaries, sandflats, saltfields, sewage ponds, freshwater wetlands (Pizzey and Knight, 2012).	The DBCA database identified 12 records within 50 km of the Survey Area, including 12.3 km north in 2014 and 12.7 km north in 2004 (DBCA, 2024d).	**Medium** Limited seasonal wetland habitat within the Survey Area.
Laridae	*Sternula albifrons* Little Tern	MI	MI, MA	Coastal waters, bays, inlets, saline or brackish lakes, saltfields, sewage ponds near coast (Pizzey and Knight, 2012).	The DBCA database identified 28 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Laridae	*Sternula nereis nereis* Fairy Tern	VU	VU, MA	Coastal, bays, inlets, beaches, salt ponds and lakes (Morcombe, 2003).	The DBCA database identified two records within 50 km of the Survey Area, including 11.3 km north in 1995 and 12.6 km north in 2008 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Laridae	*Thalasseus bergii* Greater Crested Tern, Crested Tern	MI	MI, MA	Coastal, offshore waters; beaches, bays, inlets, tidal rivers, salt swamps, lakes, larger rivers (Pizzey and Knight, 2012).	The DBCA database identified 37 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017, and 3 km east in 2007 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Maluridae	*Amytornis whitei whitei* Rufous Grasswren	P4	–	Spinifex associated with mallee, acacias, though prefer tall dense spinifex hummocks; rocky slopes, and ridges; *A. whitei whitei* also inhabit coastal shrubs (Pizzey and Knight, 2012; Menkhorst et al. 2017).	Two NatureMap records were identified (DBCA, 2024b).	**Medium** Two records within desktop study area. Suitable habitat present within the Survey Area.
Motacillidae	*Motacilla cinerea* Grey Wagtail	MI	MI, MA	Running water near disused quarries; sandy, rocky streams in escarpments; sewage ponds, ploughed fields, airfields (Pizzey and Knight 2012).	No nearby records identified from the database searches or literature.	**Low** Limited seasonal damp grassland habitat within the Survey Area but no recent record.
Motacillidae	*Motacilla tschutschensis* Eastern Yellow Wagtail	MI	MI, MA	Short grass and bare ground; swamp margins, sewage ponds, saltmarshes, ploughed fields, airfields, lawns (Pizzey and Knight, 2012).	The DBCA databse identified two records within 50 km of the Survey Area, both 13.7 km north in 1982 (DBCA, 2024d).	**Low** Limited seasonal damp grassland habitat within the Survey Area but no recent record.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Pandionidae	*Pandion haliaetus* Osprey	MI	MI, MA	Coasts, estuaries, bays, inlets; islands and surrounding waters; coral atolls, reefs, lagoons, rock cliffs, stacks; larger rivers (Pizzey and Knight, 2012).	The DBCA database identified 87 records within 50 km of the Survey Area, including 15 km north in 2017 and 5.0 km north in 2013 (DBCA, 2024d).	**High** Nearby and recent records and suitable major drainage line habitat within the Survey Area.
Psittaculidae	*Pezoporus occidentalis* Night Parrot	CR	EN	Seeding spinifex on stony rises, breakaway country, sandy lowlands; shrubby glasswort, chenopods; succulents on flats around salt lakes; flooded claypans, saltbush, bluebush, bassia associations (Pizzey and Knight, 2012).	No nearby records identified from the database searches or literature.	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Actitis hypoleucos* Common Sandpiper	MI	MI, MA	Shallow, pebbly, muddy, or sandy sedges of rivers and streams, coastal to far inland; dams, lakes, sewage ponds; margins of tidal rivers; waterways in mangroves or saltmarsh; mudflats; rocky or sandy beaches; causeways, riverside lawns, drains, street gutters (Pizzey and Knight, 2012).	The DBCA database identified 90 records within 50 km of the Survey Area, including two records 15 km north in 2017 and 3 km north in 2014 (DBCA, 2024d).	**Medium** Nearby records and limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Arenaria interpres* Ruddy Turnstone	MI	VU, MI, MA	Tidal reefs and pools; weed-covered rocks; pebbly, shelly and sandy shores with stranded seaweed; mudflats; occasionally inland on shallow waters; sewage ponds, commercial saltflats, open or ploughed ground (Pizzey and Knight, 2012).	The DBCA database identified 104 records within 50 km of the Survey Area, including two records 3 km north in 2010 and 15 km north in 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Calidris acuminata* Sharp-tailed Sandpiper	MI	VU, MI, MA	Tidal mudflats, saltmarshes, mangroves; shallow fresh, brackish or saline inland wetlands; muddy edges of lagoons, swamps, lakes, floodwaters, dams, irrigated patures and crops; sewage ponds, saltfields (Morcombe, 2003; Pizzey and Knight, 2012).	The DBCA database identified 48 records within 50 km of the Survey Area, including two records 3 km north in 2014, and 15 km north in 2017 (DBCA, 2024d).	**Medium** Nearby records and limited suitable habitat present within the Survey Area.
Scolopacidae	*Calidris alba* Sanderling	MI	MI, MA	Broad ocean beaches of firm sand with seaweed; often near river mouths; also, inlets, tidal mudflats, coastal lagoons (Pizzey and Knight, 2012).	The DBCA database identified 24 records within 50 km of the Survey Area, including one record within the Survey Area in 1981 and 15 km north in 2017 (DBCA, 2024d).	**Previously Recorded** One historic record inside the Survey Area and nearby recent records. Suitable tidal mudflat habitats 10 km north have connectivity to the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Calidris canutus* Red Knot	EN	VU, MI, MA	Tidal mudflats, sandflats, beaches, saltmarshes, flooded pastures, ploughed lands (Pizzey and Knight, 2012).	The DBCA database identified 20 records within 50 km of the Survey Area, including three records 13 km north in 2014 and 15 km north in 2016 (DBCA, 2024d).	**Medium** Limited seasonal floodwater habitat within the Survey Area.
Scolopacidae	*Calidris falcinellus* Broad-billed Sandpiper	MI	MI, MA	Tidal mudflats, estuaries, reefs, saltmarsh, freshwater wetlands and lakes, near-coastal salt lakes; sewage ponds; favours muddy ooze (Morcombe, 2003; Pizzey and Knight, 2012).	The DBCA database identified 24 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017(DBCA, 2024d).	**Medium** Limited seasonal wetland habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Calidris ferruginea* Curlew Sandpiper	CR	CR, MI, MA	Inter-tidal mudflats of estuaries, lagoons, mangrove channel; saltmarsh, saltfields; fresh, brackish, or saline wetlands; flooded saltbush surrounds of inland lakes; dams, floodwaters, sewage ponds (Morcombe, 2003; Pizzey and Knight, 2012).	The DBCA database identified 47 records within 50 km of the Survey Area, including two records 3 km north in 2010, and two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Medium** Nearby records and limited seasonal floodwater habitat within the Survey Area.
Scolopacidae	*Calidris melanotos* Pectoral Sandpiper	MI	MI, MA	Shallow fresh waters, often with low grass or other herbage; swamp margins, flooded pastures, sewage ponds; occasionally tidal areas, saltmarshes (Pizzey and Knight, 2012).	The DBCA database identified two records within 50 km of the Survey Area, including 7.5 km north in 2014 and 17.2 km north in 1988 (DBCA, 2024d).	**Medium** Nearby record and limited seasonal floodwater habitat within the Survey Area.
Scolopacidae	*Calidris pugnax* Ruff	MI	MI, MA	Fresh, brackish, and saline wetlands; tidal mudflats, saltfields, sewage farms (Pizzey and Knight, 2012).	The DBCA database identified two records within 50 km of the Survey Area, including 5.5 km south in 1979 and 15.0 km north in 2017 (DBCA, 2024d).	**Medium** Limited seasonal wetland habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Calidris ruficollis* Red-necked Stint	MI	MI, MA	Tidal mudflats, saltmarshes, sandy or shelly beaches; saline and freshwater wetlands, salt fields, sewage ponds (Pizzey and Knight, 2012).	The DBCA database identified 84 records within 50 km of the Survey Area, including 3 km north in 2014 and two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Medium** Nearby record and limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Calidris subminuta* Long-toed Stint	MI	MI, MA	Tussocky, weedy margins of shallow wetlands, coastal and inland; sewage ponds, weed on tideline, tidal mudflats (Pizzey and Knight, 2012).	The DBCA database identified 13 records within 50 km of the Survey Area, including two records 3 km north in 2010 and one record 15 km north in 2015 (DBCA, 2024d).	**Medium** Nearby record and limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Calidris tenuirostris* Great Knot	CR	VU, MI, MA	Tidal mudflats; sandy ocean and bay shores; estuaries; shallow saline and freshwater wetlands (Pizzey and Knight, 2012).	The DBCA database identified 38 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017, and one record 12 km north in 2014 (DBCA, 2024d).	**Medium** Limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Gallinago megala* Swinhoe's Snipe	MI	MI, MA	Wet grassy ground; edges of reedy swamps (Pizzey and Knight, 2012).	The DBCA database identified one record within 50 km of the Survey Area, 43.0 km east in 1977 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Gallinago stenura* Pin-tailed Snipe	MI	MI, MA	Boggy edges of vegetated wetlands; sewage and other ponds; stubbles, grasslands with shrubs, pastures (Pizzey and Knight, 2012).	The DBCA database identified three records within 50 km of the Survey Area, including 6.8 km north in 2014 and 13.7 km north in 1976 (DBCA, 2024d).	**Medium** Limited seasonal floodwater habitat within the Survey Area.
Scolopacidae	*Limnodromus semipalmatus* Asian Dowitcher	MI	VU, MI, MA	Beaches, mudflats, commercial saltfields, and sewage ponds (Pizzey and Knight, 2012).	The DBCA database identified 15 records within 50 km of the Survey Area, including 12.8 km north in 1994 and 15.0 km north in 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Scolopacidae	*Limosa lapponica* Bar-tailed Godwit	MI	MI, MA	Tidal mudflats, estuaries, sewage ponds, shallow river margins, brackish or saline inland lakes, flooded pastures, airfields (Pizzey and Knight, 2012).	The DBCA database identified 71 records within 50 km of the Survey Area, including two records 12 km north in 2014, and two records 15 km north in 2016 and 2017 (DBCA, 2024d).	**Medium** Limited seasonal flooded paddock and river margin habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Limosa limosa* Black-tailed Godwit	MI	EN, MI, MA	Tidal mudflats, estuaries, sandspits, shallow river margins, sewage ponds; inland on large shallow fresh or brackish waters (Pizzey and Knight, 2012).	The DBCA database identified 12 records within 50 km of the Survey Area, including two records 15 km north in 2013 and 2016 (DBCA, 2024d).	**Medium** Nearby records, and seasonal wetland habitat within the Survey Area.
Scolopacidae	*Numenius madagascariensis* Far Eastern Curlew, Eastern Curlew	CR	CR, MI, MA	Estuaries, tidal mudflats, sandspits, saltmarshes, mangroves; occasionally fresh or brackish lakes; bare grasslands near water (Pizzey and Knight, 2012).	The DBCA database identified 49 records within 50 km of the Survey Area, including 12 km north in 2014 and 13 km north in 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Scolopacidae	*Numenius minutus* Little Curlew	MI	MI, MA	Dry grasslands, floodplains, margins of drying swamps; tidal mudflats, airfields, playing fields, crops, commercial saltfields, sewage ponds (Pizzey and Knight, 2012).	The DBCA database identified 30 records within 50 km of the Survey Area, including two records 3 km north in 2010, and one record 14 km north in 2016 (DBCA, 2024d).	**High** Nearby records, and suitable dry grassland plains within the Survey Area

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Numenius phaeopus* Whimbrel	MI	MI, MA	Estuaries, mangroves, tidal flats, coral cays, exposed reefs, flooded paddocks, sewage ponds, bare grasslands, sport grounds, lawns (Pizzey and Knight, 2012).	The DBCA database identified 80 records within 50 km of the Survey Area, including 12 km north in 2015 and 13 km north in 2017 (DBCA, 2024d).	**Medium** Limited seasonal flooded paddock habitat within the Survey Area.
Scolopacidae	*Phalaropus lobatus* Red-necked Phalarope	MI	MI, MA	Shallow pools, tidal mudflats, beaches, saltmarshes, freshwater wetlands; commercial saltfields (Pizzey and Knight, 2012).	The DBCA database identified 11 records within 50 km of the Survey Area, including four records within the Survey Area in 1981 and 15 km north in 2017 (DBCA, 2024d).	**Previously Recorded** Limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Tringa brevipes* Grey-tailed Tattler	MI, P4	MI, MA	Estuaries, tidal mudflats, mangroves; wave-washed rocks and reefs; shallow margins of coastal or inland rivers (Pizzey and Knight, 2012).	The DBCA database identified 74 records within 50 km of the Survey Area, including two records 15 km north in 2016 and 2017, and one record 11 km north in 2014 (DBCA, 2024d).	**Medium** Limited minor and major drainage habitats within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Tringa glareola* Wood Sandpiper	MI	MI, MA	Muddy margins of wetlands with emergent sedges and taller fringing vegetation; tidal mangroves; margins of tidal mudflats; saltmarshes, sewage pond (Pizzey and Knight, 2012; Menkhorst et al., 2017).	The DBCA database identified 37 records within 50 km of the Survey Area, including one record 3 km north and four records 8 km north in 2014 (DBCA, 2024d).	**Medium** Nearby records and limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Tringa nebularia* Common Greenshank	MI	EN, MI, MA	Mudflats, estuaries, saltmarshes, swamps, margins of lakes, muddy shallows of lagoons; permanent and temporary wetlands, claypans; commercial saltfield, irrigated crops, sewage ponds (Morcombe, 2003; Pizzey and Knight, 2012).	The DBCA database identified 92 records within 50 km of the Survey Area, including two records 3 km north in 2010, and two records15 km north in 2016 and 2017 (DBCA, 2024d).	**High** Nearby records and suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scolopacidae	*Tringa stagnatilis* Marsh Sandpiper	MI	MI, MA	Fresh, brackish, and saline wetlands; sewage ponds, commercial saltfields, bore drains, mangroves, tidal mudflats, estuaries (Pizzey and Knight, 2012).	The DBCA database identified 35 records within 50 km of the Survey Area, including one record within the Survey Area in 1981 and 12 km north in 2014 (DBCA, 2024d).	**Previously Recorded** Limited seasonal wetland habitat within the Survey Area.
Scolopacidae	*Xenus cinereus* Terek Sandpiper	MI	VU, MI, MA	Tidal mudflats, estuaries; shores and reefs of islands; coastal swamps, commercial saltfields (Pizzey and Knight, 2012).	The DBCA database identified 32 records within 50 km of the Survey Area, including 13 km north in 2015 and 15 km north in 2017 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Sulidae	*Sula leucogaster* Brown Booby	MI	MI, MA	Nests on islands. Rarely on shoreline, only to perch on pylons/piers (Menkhorst et al., 2017).	The DBCA database identified two records within 50 km of the Survey Area, including 19.2 km north in 1979 and 45.5 km north in 1984 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Threskiornithidae	*Plegadis falcinellus* Glossy Ibis	MI	MI, MA	Well-vegetated wetlands, wet pastures, ricefields, flooded waters, floodplains; brackish or occasionally saline wetlands, mangroves, mudflats, occasionally dry grasslands (Pizzey and Knight, 2012).	The DBCA database identified 13 records within 50 km of the Survey Area, including 14 km north in 2013 and 15 km east in 2011 (DBCA, 2024d).	**Medium** Nearby records, and seasonal wetland and dry grassland habitat within the Survey Area.
Mammals						
Dasyuridae	*Dasycercus blythi* Brush-tailed Mulgara, Ampurta	P4	–	Hummock grasslands (e.g. *Triodia* spp.) and shrublands on sandy soils (Menkhorst and Knight, 2010).	The DBCA database identified 287 records within 50 km of the Survey Area, including 15 records within the Survey Area in 2012 (DBCA, 2024d).	**Previously Recorded** Recorded within the Survey Area in 2012, and suitable habitat within the Survey Area.
Dasyuridae	*Dasycercus cristicauda* Crest-tailed Mulgara	P4	–	Outside the distribution of the species.	The DBCA database identified three records within 50 km of the Survey Area in 2009 (DBCA, 2024d).	**Low** The records are most likely the result of misidentification, as the Survey Area is well outside of the species' historical and extant distribution.

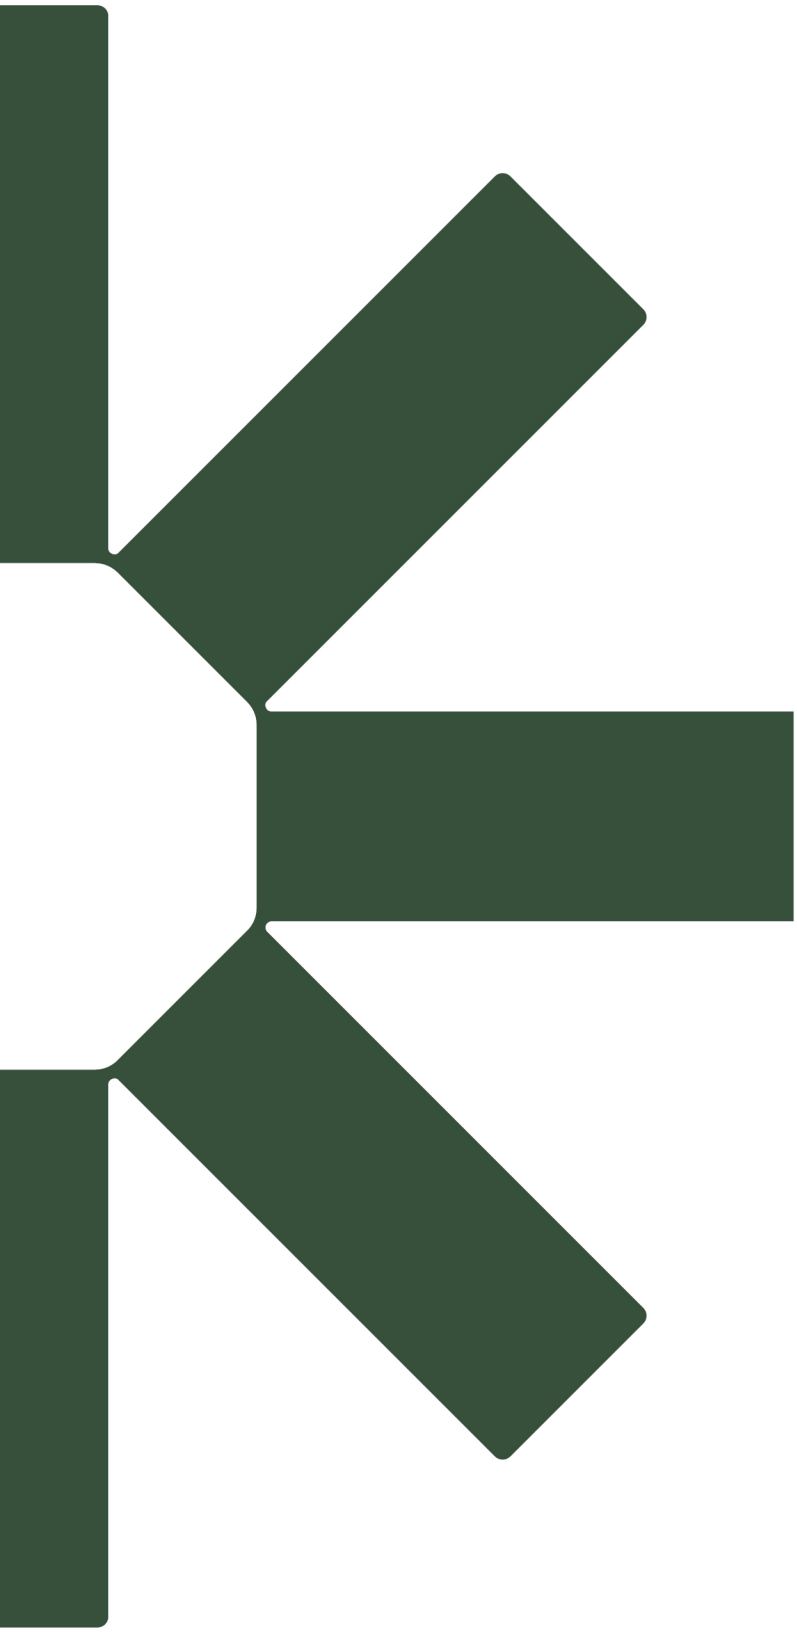
Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Dasyuridae	*Dasyurus hallucatus* Northern Quoll	EN	EN	Dissected rocky escarpments; eucalypt forest and woodland; human settlements; occasionally in rainforest patches or on beaches (Van Dyck, Gynther and Baker, 2013).	The DBCA database identified 1282 records within 50 km of the Survey Area, including nine records within the Survey Area in 2012 and 2014 (DBCA, 2024d).	**Previously Recorded** Recorded within the Survey Area in 2012, and suitable habitat within the Survey Area.
Macropodidae	*Lagostrophus fasciatus fasciatus* Banded Hare-wallaby	VU	VU	Dense thickets of *Acacia* and *Alectryon* scrub on the sandplains, and *Diplolaena* and *Acacia* on the dunes (Van Dyck, Gynther and Baker, 2013).	The DBCA database identified one historical record 8.5 km north of the Survey Area (DBCA, 2024d).	**Low** No recent records, outside known distribution.
Megadermatidae	*Macroderma gigas* Ghost Bat	VU	VU	Deep caves and mines, and occasionally rock fissures and boulder piles occurring within a widespread but patchy distribution across northern Australia from the arid Pilbara to the lush rainforests of north Queensland (Baker and Gynther, 2023).	The DBCA database identified 65 records within 50 km of the Survey Area, including 38 km south in 2022, 3 km south in 2017, and 63 records less than 4.0 km south in 2009 (DBCA, 2024d).	**High** Recent and nearby records. Suitable rock fissures and boulder piles within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Molossidae	*Ozimops cobourgianus* Northern Coastal Free-tailed Bat	P1	–	Mangroves, monsoon and paperbark forests, eucalypt forests and woodland. Use hollows and crevices in mangroves as nesting sits (Van Dyck, Gynther and Baker, 2013). Restricted to mangrove habitat in north-west coastal WA (McKenzie, Bullen and Gibson, 2020).	The DBCA database identified seven records within 50 km of the Survey Area, including two records 13 km north in 2008 and 2009 (DBCA, 2024d).	**Low** No suitable habitats within the Survey Area.
Muridae	*Leggadina lakedownensis* Short-tailed Mouse	P4	–	Monsoon tropical coast to semiarid areas in spinifex and tussock grasslands, samphire, sedgelands, Acacia shrublands, tropical eucalypt and Melaleuca woodlands and stony ranges (Van Dyck, Gynther and Baker, 2013).	The DBCA database identified 10 records within 50 km of the Survey Area, including two records 30.4 km east in 2006 (DBCA, 2024d).	**Medium** Multiple historic records. Suitable habitats present within the Survey Area.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Muridae	*Pseudomys chapmani* Western Pebble-mound Mouse	P4	–	Gentler slopes of rocky ranges covered by stony mulch and hard spinifex, often with a sparse overstorey of eucalypts and scattered shrubs (Van Dyck, Gynther and Baker, 2013).	The DBCA database identified 93 records within 50 km of the Survey Area, including 27 records within 36 km in 2022, and 4 records 3 km south in 2009 (DBCA, 2024d).	**Recorded** Recorded during the field survey.
Rhinonycteridae	*Rhinonicteris aurantia Pilbara form* Pilbara Leaf-nosed Bat	VU	VU	Most easily observed foraging in gorges and gullies, often over pools, also spinifex hummock grasslands. Roosts in relatively deep, warm, and humid caves and mine adits (Van Dyck, Gynther and Baker, 2013).	The DBCA database identified 12 records within 50 km of the Survey Area, including 3 records 3 km south in 2009, and one record 35 km south in 2019 (DBCA, 2024d).	**Recorded** Recorded during the field survey.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Thylacomyidae	*Macrotis lagotis* Bilby, Dalgyte	VU	VU	Mitchell grass and stony downs country of cracking clays, desert sandplains and dune fields sometimes containing laterite, hummock grassland and massive red earths with *Acacia* shrubland (Van Dyck, Gynther and Baker, 2013).	A total of 95 DBCA records were identified. These include 3 records within 2 km of the Survey Area from 2018 to 2019; 4 records within 10 km of the Survey Area from 2010 to 2019, and a further 19 records within 50 km of the Survey Area from 2021 to 2022 (DBCA, 2024d).	**Previously Recorded** Previous records identified from the literature review occur inside the Survey Area. Suitable habitat is present.
Reptiles						
Pythonidae	*Liasis olivaceus barroni* Pilbara Olive Python	VU	VU	Associated with open water, watercourses, and rock pools especially those close to rocky areas. Often found in rocky hills, escarpments, and plains dominated by dense grassy vegetation such as *Triodia* (Wilson and Swan, 2021).	The DBCA database identified five records within 50 km of the Survey Area, including 1.5 km east in 2013 and 3.5 km east in 2007 (DBCA, 2024d).	**High** Nearby records, and limited watercourses close to rocky areas within the Survey Area. May travel through the Survey Area along Drainage Line habitats.

Family	Scientific Name	Conservation Status		Habitat	Previous Records	Likelihood of Occurrence
		State	Commonwealth			
Scincidae	*Ctenotus angusticeps* Northwestern Coastal Ctenotus	P3	–	Mainland population inhabits coastal mudflats vegetated with samphire, sometimes sheltering in crab holes on intertidal zone (Wilson and Swan, 2021).	The DBCA database identified 16 records within 50 km of the Survey Area, including two records 7.8 km north in 2012 (DBCA, 2024d).	**Low** No suitable habitat within the Survey Area.
Scincidae	*Notoscincus butleri* Lined Soil-crevice Skink	P4	–	Arid, rocky, near coastal Pilbara. Associated with spinifex-dominated areas near creek and river margins (Wilson and Swan, 2021).	One record from literature, 100 km west of the Survey Area in 2014 (Phoenix Environmental Sciences, 2014).	**Low** No nearby records, and limited spinifex-dominated areas near river margin habitat within the Survey Area.



Making Sustainability Happen
