Executive Summary

Ecoedge Environmental Services was engaged by the Shire of Cuballing to undertake a Targeted, Detailed and Reconnaissance flora and vegetation survey along 16 km of the Wandering-Narrogin Road. The report is to be part of a new clearing permit application for upgrading the road. The area surveyed was approximately 35 ha, of which approx. 5.9 hectares, is native vegetation.

The survey was undertaken on the flora and vegetation survey was undertaken on 13/09, 18/09, 19/09, 11/10 and 03/11/2023, by Russell Smith (flora permit FB62000500) and Colin Spencer (flora permit FB62000169-3) in accordance with the Environmental Protection Authority (EPA) Technical Guidance - Flora and Vegetation Surveys for Environmental Impact Assessment (EPA 2016).

One hundred and sixty-nine vascular flora taxa were identified within the survey area, thirty-eight of which were introduced species.

No Threatened or Priority flora were found within the survey area. Nor were any Declared Pest Plants under the Biosecurity and Agriculture Management Act 2007 or Weeds of National Significance found.

The post-survey of likelihood of occurrence determined that it was unlikely that any of the 78 conservation significant taxa identified as possibly occurring in the survey area occurred there. Mainly this was because, even though suitable habitat may have been present a thorough survey at an appropriate time of year failed to find the taxon. Six vegetation units were described and mapped. Three of these (VU1, VU2 and VU3), comprising intact native vegetation dominated by *Eucalyptus wandoo* and *E. accedens*, were confined to the Dryandra Woodlands National Park part of the survey area. North of Dryandra Woodlands National Park most native understorey species are absent, and the vegetation units (VU4, VU5 and VU6) are described using mainly overstorey species.

An assessment against the key diagnostic characteristics for the “Eucalypt Woodlands of the Western Australia Wheatbelt” TEC showed that it only occurs within the Dryandra Woodlands National Park (within units VU1, VU2 and VU3) at the southern end of the survey area. It forms two patches, on the eastern and western side of the road (Patch 1 and Patch 2). A total of 1.59 ha of Wheatbelt Woodland TEC is situated within the survey area.

Five of Beard’s vegetation associations are mapped for the survey area, only one of which, Association 5, meets or exceeds the 30% of pre-European extent vegetation remaining target across all levels from LGA to State level.

The southern end of the survey area occurs within a large ESA that extends over the Dryandra National Park and Lol Gray State Forest boundaries. This ESA possibly relates to the occurrences of Wheatbelt Woodlands TEC.

Statement of Limitations

Reliance on Data

In the preparation of this report, Ecoedge has relied on data, surveys, analyses, designs, plans and other information provided by the Client and other individuals and organisations, most of which are referred to in the report. Unless stated otherwise in the report, Ecoedge has not verified the accuracy or completeness of the data. To the extent that the statements, opinions, facts, information, conclusions and/or recommendations in the report are based in whole or in part on the data, those conclusions are contingent upon the accuracy and completeness of the data. Ecoedge will not be liable in relation to incorrect conclusions should any data, information or condition be incorrect or have been concealed, withheld, unavailable, misrepresented or otherwise not fully disclosed to Ecoedge.

Report for the Benefit of the Client

The report has been prepared for the benefit of the Client and for no other party. Ecoedge assumes no responsibility and will not be liable to any other person or organisation for or in relation to any matter dealt with or conclusions expressed in the report or for any loss or damage suffered by any other person or organisation arising from matters dealt with or conclusions expressed in the report (including, without limitation, matters arising from any negligent act or omission of Ecoedge or for any loss or damage suffered by any other party relying on the matters dealt with or conclusions expressed in the report). Other parties should not rely upon the report or the accuracy or completeness of any conclusions and should make their own enquiries and obtain independent advice in relation to such matters.

1 Introduction

Ecoedge Environmental Services (Ecoedge) was engaged by the Shire of Cuballing (the Shire) in August 2023 to undertake a Detailed and Targeted flora and vegetation survey of a 16.5 kilometre (km) section of the Wandering-Narrogin Road within the Shire of Cuballing (**Figure 1** and **Figure 2**). The Shire required the survey of approximately 35 ha, of which approximately 5.9 ha comprised roadside vegetation, to inform project planning and assist with environmental approval processes associated with the application of a clearing permit.

The survey area occurs between Wandering and Narrogin and is located approximately 16 km to the northwest of the town of Cuballing. The survey area is surrounded by agricultural land and approximately 3.4 km of the southern portion of the survey area is bordered by Dryandra National Park and Lol Gray State Forest.

The flora and vegetation survey was undertaken on the 24 September, 11 October and 3 November 2023 by qualified botanists Russell Smith (over 35 years' experience) and Colin Spencer (over eight years' experience) in accordance with the Environmental Protection Authority (EPA) (2016) Technical Guidance, Flora and Vegetation Surveys for Environmental Impact Assessment.

This report compiles findings of the field survey.

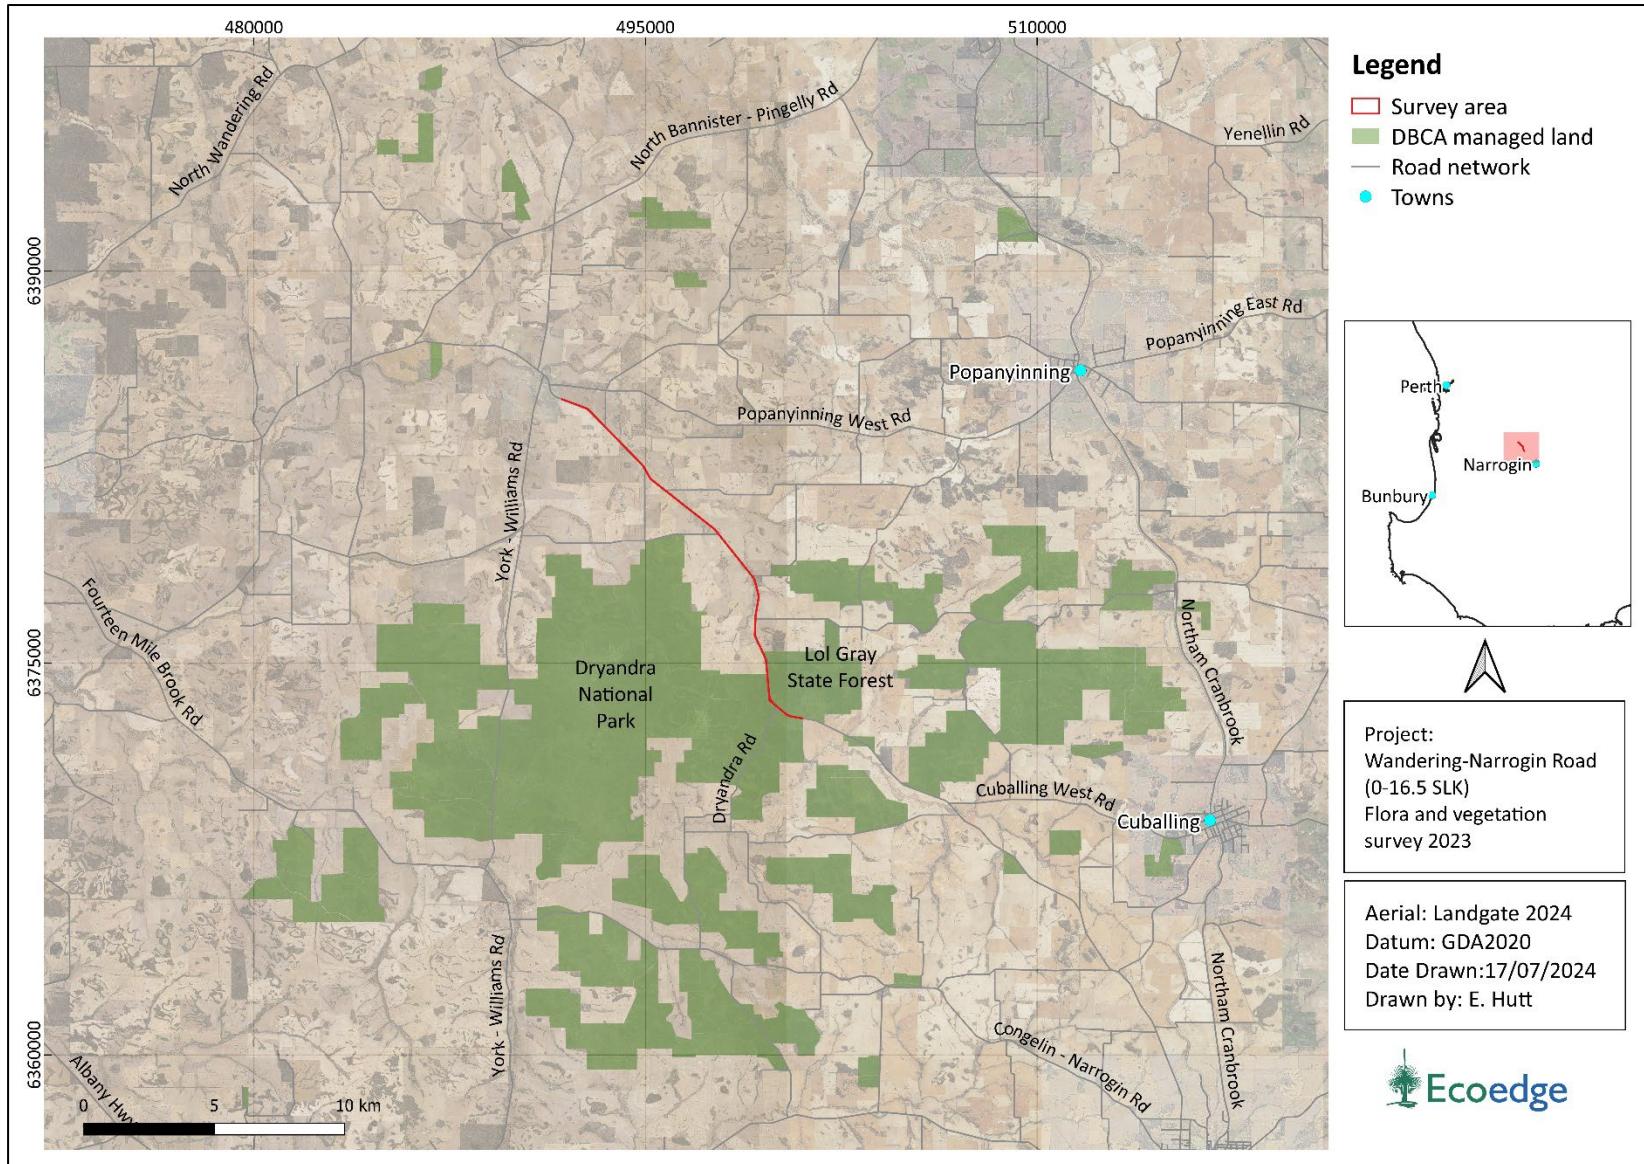

Figure 1. Aerial photograph showing the location of the survey area.

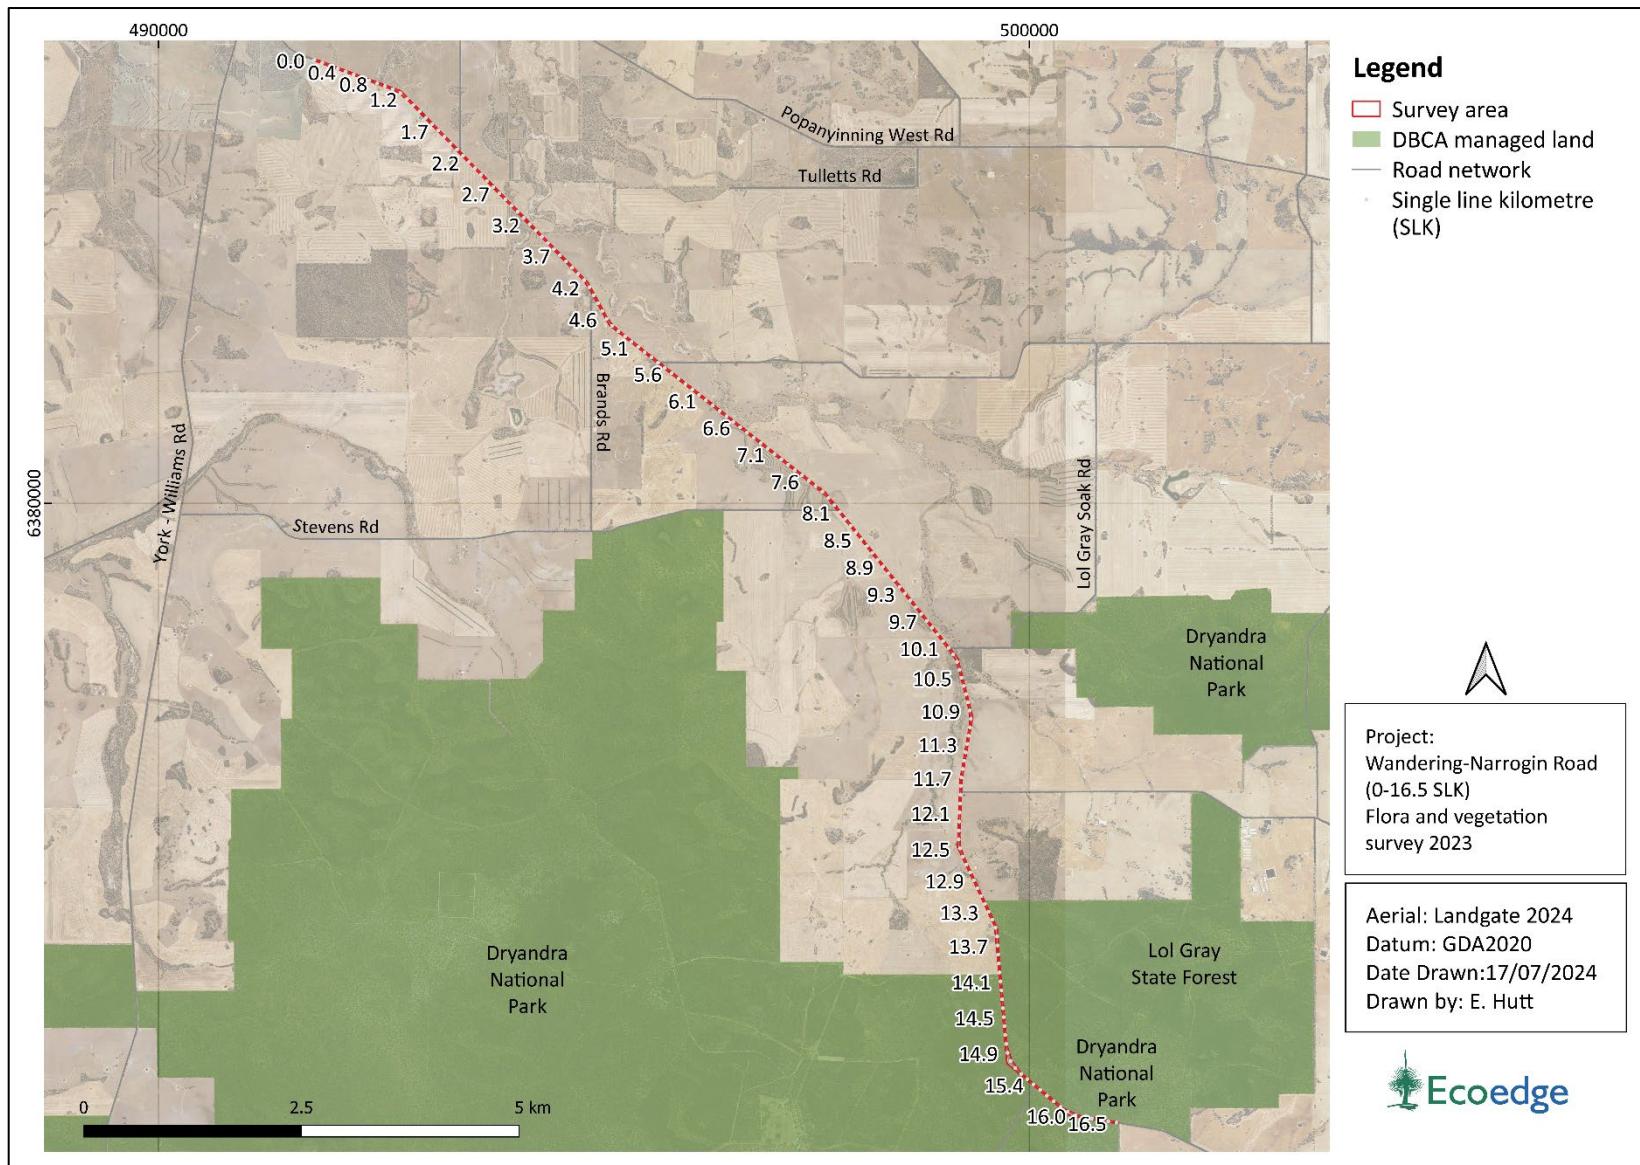

Figure 2. Aerial photograph showing the location of the survey area.

1.1 Scope and objectives

The scope required a desktop assessment to be conducted prior to the field survey to identify relevant key features and constraints which were in or nearby the survey area, such as Threatened and Priority Flora, Threatened and Priority Ecological Communities (TEC and PECs), riparian vegetation, soil/landscape systems, conservation estates, poorly represented vegetation associations and or vegetation complexes and environmentally sensitive areas (ESAs). The desktop assessment area (study area) encompassed a thirty kilometre buffer to the survey area.

The field survey was required to ground truth the desktop assessment findings and delineate all significant flora and vegetation components within the survey area, including TECs and PECs and Threatened and Priority flora.

The survey and report were required to be undertaken in accordance with the Environmental Protection Authority (EPA) Technical Guidance - Flora and Vegetation Surveys for Environmental Impact Assessment (EPA 2016) and meet requirements of other relevant State, and Commonwealth guidelines for threatened species and communities, such as approved conservation advice for *Environmental Protection and Biodiversity Act 1999* (EPBC Act 1999) threatened species and communities.

2 Methods

2.1 Desktop assessment

A desktop assessment was undertaken over a 10 to 30 km buffer to the survey area to provide contextual information on the flora and vegetation within the survey area. The desktop studies included a review of the following information.

- Regional geology and Soil Landscape Mapping – Best Available dataset (DPIRD-027) (Churchward and McArthur 1977, Tille and Wilson 1996, DPIRD 2017).
- Vegetation complex mapping of the South-West Forest Region of Western Australia (Mattiske and Havel 1998) and the System 6 area (Heddle et al. 1980) as updated by Webb et al. (2016).
- Beard's pre-European vegetation association mapping dataset (DPIRD-006) (Beard et al. 2013).
- WA Threatened and Priority Ecological Communities DBCA database extracts from the Department of Biodiversity, Conservation and Attractions (DBCA 2024a) and TEC and PEC listings (DBCA 2023a, DBCA 2023b).
- Federal Protected Matters Search Tool results (DCCEEW 2024).
- Atlas of Living Australia 30 km area report (ALA 2024).
- Threatened and Priority flora Naturemap search results (DBCA 2024b).
- Extract from the Department's Threatened Flora database and the Western Australian Herbarium database (DBCA 2024c).
- Wheatbelt Wetlands Stage 1 dataset DBCA-021 (DBCA 2017).
- Environmentally sensitive areas distribution maps and dataset (DWER 2021).
- Surface Hydrology Lines (National) (Crossman & Li 2015).

The assessment also included a review of the survey:

- Vascular Flora of Dryandra Woodland (Lol Gray and Montague State Forests). (Keighery & Keighery 2012).

From the DBCA data a list of Threatened and Priority flora was created. The likelihood of occurrence assessment methodology for pre and post survey is provided in **Appendix 1**.

2.2 Field survey

The flora and vegetation survey was undertaken on 13/09, 18/09, 19/09, 11/10 and 03/11/2023, by Russell Smith (flora permit FB62000500) and Colin Spencer (flora permit FB62000169-3) in accordance with the Environmental Protection Authority (EPA) Technical Guidance - Flora and Vegetation Surveys for Environmental Impact Assessment (EPA 2016). The two botanists have a combined 45 years' experience in carrying out flora surveys in the southwest of W.A.

Vegetation condition was assessed in the field using the method of the EPA (2016) (**Appendix 2**). The location of all data collection points and trackfiles is shown in **Appendix 3**.

The targeted survey for threatened and priority flora consisted of a random meandering pattern, with potential habitat areas searched more thoroughly in accordance with EPA (2016) and technical guidance statements, such as the Commonwealth of Australia (2013) Survey Guidelines for Australia's Threatened Orchids.

Flora species not identified in the field were either photographed or collected for later identification (as per WA Herbarium guidelines (DBCA 2020a).

Vegetation mapping notes were collected at 53 locations in the survey area and vegetation condition was recorded at 132 points. In addition, three floristic quadrats (10m x 10m) (DRYAN01, 02, 03) were installed within the southern part of the survey area within Dryandra Woodland National Park.

2.3 Vegetation Units

Vegetation unit descriptions were based on the National Vegetation Information System (NVIS) (Level 5; NVIS 2017) from information collected at mapping notes, vegetation condition points and quadrats. This information together with the support of recent aerial photography was used to map the spatial boundary of the vegetation units.

Because most vegetation in the survey area was Completely Degraded, with few if any understorey species vegetation units were predominantly defined by the key overstorey species, with understorey species only playing a role in the delineation of vegetation units within Dryandra Forest NP in the south of the survey area.

2.4 Multivariate Analysis of Quadrat Floristic Data

The floristic quadrat data from the three quadrats placed within the survey area was subjected to multivariate analysis (MVA) using the software PATN (Belbin 2003) to determine the relationship of the vegetation units described and mapped within the survey area to the quadrat data collected for the Western Australian wheatbelt (*A Biodiversity Survey of the Western Australian Agricultural Zone*; Gibson et al. 2004).

The data from Gibson et al. (2004) was taxonomically updated before the analysis. The following totals for flora taxa and floristic quadrats were involved in the MVA: 433 quadrats x 2,246 taxa.

Output from the MVAs is in the form of dendograms and quadrat group/species group tables and quadrat group association scores. Because of the very large size of the resulting diagram, it is included in this survey report as an appendix (**Appendix 4**).

2.5 Identification of Wheatbelt woodlands Threatened Ecological Community.

Potential occurrences of Wheatbelt TEC within the survey area were assessed to determine whether they met the DoE (2015) key diagnostic, area and condition thresholds, which are summarised below.

Key diagnostics:

- The vegetation occurs within the defined distribution area.
The distribution of the ecological community is limited to the Merredin (AVW01) and Katanning subregions of the Avon Wheatbelt IBRA region, the Western Mallee MAL02 subregion of the Mallee IBRA region and outlying patches in the eastern parts of JAF01 Northern Jarrah Forests and JAF02 Jarrah Forests adjacent to the Avon Wheatbelt, that are off the Darling Range, and receive less than 600 mm mean annual rainfall.
- The vegetation has the correct structure - a minimum 10% canopy of predominantly key eucalypt species.
- The vegetation contains key eucalypt tree species with a variable native understorey.
- The vegetation meets minimum area and condition thresholds – this means that the vegetation must be in at least a Degraded to Good condition and have an area of at least 5 ha to be regarded as an occurrence of the TEC.

2.6 Survey limitations

Potential limitations with regard to the survey are addressed in **Table 1**.

Table 1. Limitations of the field survey with regard to assessment adequacy and accuracy.

Aspect	Constraint	Comment
Scope	Not a constraint	The survey scope was prepared in consultation with the Client and was designed to comply with EPA requirements.
Proportion of flora identified	Not a constraint	The survey was carried out from September to early November which covers the optimal time for flowering in the southwest.
Climatic and seasonal effects	Minor constraint	Rainfall for the period till the end of October for Narrogin the nearest station with complete records was 78% of the long-term mean. However, germination and flowering appear to have been minimally affected.

Aspect	Constraint	Comment
Availability of contextual information	Not a constraint	A regional survey for the WA Wheatbelt has been carried out as well as surveys in the adjacent Dryandra Woodland NP.
Completeness of the survey	Not a constraint	All the survey area was easily accessible
Skill and knowledge of the botanists	Not a constraint	The botanists have 40 years' experience between them in flora surveys in the south-west of W.A.
Disturbance (fire, grazing, clearing etc.)	Minor	A large portion of the vegetation has been subject to physical disturbance and invasion by weeds. There has been no recent disturbances that have limited the survey.

3 Results desktop assessment

3.1 Biogeographic region and location

The survey area occurs across the Northern Jarrah Forest (JAF01) sub-region of the Jarrah Forest (JAF), and the Katanning (AVW02) subregion of the Avon Wheatbelt (AVW) as defined in the Interim Biogeographical Regionalisation for Australia (IBRA) (Commonwealth of Australia, 2016).

3.2 Landform and soils

The survey area is situated within the Southern Zone of Rejuvenated Drainage (identification code 257) soil landscape zone in the Avon Province as defined by Tille and Wilson (1996). This zone consists of gently undulating rises to low hills formed from the erosion of the Darling Plateau, with small areas of lateritic remnants. Valley floors are relatively broad with continuous stream channels that flow in winter most years. Soils are formed in colluvium or in-situ with duplex sandy gravels, loamy gravels and pale deep sands found on the lateritic remnants, and hillslopes dominated by grey deep sandy complex soils, with some grey shallow sandy duplex soils. Red shallow loamy duplex soils and red deep sandy duplex soils can be found on freshly weathered granite and metagranite. On the valley floors there are saline wet soils and grey deep sandy duplex soils (Tille et al. 2001).

The survey area occurs mostly within the Dryandra (257Dy) system which is characterised by gentle undulating (3-10%) terrain with lateritic rises and rock outcrops with sandy and loamy earths and duplexes and ironstone gravelly soils. A small section in the northern end of the survey area occurs within the Pumphreys Bridge system, a system composed of broad valley floors with minor dunes of alkaline grey shallow sandy duplexes, grey deep sandy duplexes, grey shallow loamy duplexes and saline wet soils (Churchward and McArthur 1977).

These systems have been divided into soil phases based on local soil conditions, with the soil phase found in the survey area described in **Table 2** and shown in **Figure 3**.

Table 2. Soil Mapping Units occurring within the survey area (Churchward and McArthur 1977).

System	Subsystem	Description
Dryandra (257Dy)	257DyBK	Biberkine subsystem - valley floors & footslopes with gently undulating rises & low hills. Alluvium and colluvium over granite etc. Yellow brown sandy duplexes, wet and semi-wet soils & brown deep loamy duplexes. Wandoo-Flooded Gum with Jam-Sheoak-Teatree
	257DyNB	Noombling subsystem - long gentle and undulating hillslopes and divides. Colluvium / weathered granite, gneiss and some dolerite. Yellow/brown and grey deep sandy duplexes, brown deep loamy

System	Subsystem	Description
		duplexes, sandy gravels and shallow duplexes. Marri-Wandoo / Jam-Sheoak
	257DyNO	Norrine subsystem - a complex of lateritic residuals and associated pediment; gravelly sand, sand, duplex yellow soils and duricrust
Pumphreys Bridge (257Pb)	257PbPG	Popanyinning subsystem - broad valley floor; yellow duplex soils and a narrow lower sandy terrace, sporadic sand dunes

3.3 Vegetation description according to pre-European mapping datasets

3.3.1 Vegetation associations

A systematic survey of native vegetation in Western Australia was undertaken by J. S. Beard (along with others) during the 1970s, which described vegetation systems in the southwest of Western Australia at a scale of 1:250,000. Beard's vegetation maps attempted to depict the vegetation as it might have been prior to European settlement in terms of type and extent (Beeston et al. 2001). The Beard Vegetation Association dataset, also referred to as the pre-European native vegetation extent dataset, was digitised by Shepherd et al. (2002).

Beard vegetation associations have been described to a minimum standard of Level 3 "Broad Floristic Formation" for the National Vegetation Inventory System (NVIS) (state-wide to regional scale)¹ (NVIS 2017).

The survey area is comprised of five Beard vegetation associations which are described in **Table 3** and shown in **Figure 5** and **Figure 6**.

Table 3. Vegetation associations mapped for the survey area (Beard et al. 2013).

Vegetation association	Description
Association 5	Medium woodland; Wandoo & Powderbark (<i>E. accedens</i>)
Association 352	Medium woodland; York gum
Association 946	Medium woodland; Wandoo
Association 949	Low woodland; Banksia
Association 1023	Medium woodland; York gum, Wandoo & Salmon Gum (<i>E. salmonophloia</i>)

¹ Beard's vegetation mapping units are referred to as 'associations' however these do not correspond to the NVIS Level 5 'Associations'. The NVIS system was developed long after Beard's work was completed, and while both classification systems use the same term, NVIS 'Associations' describe vegetation in more detail than do Beard's.

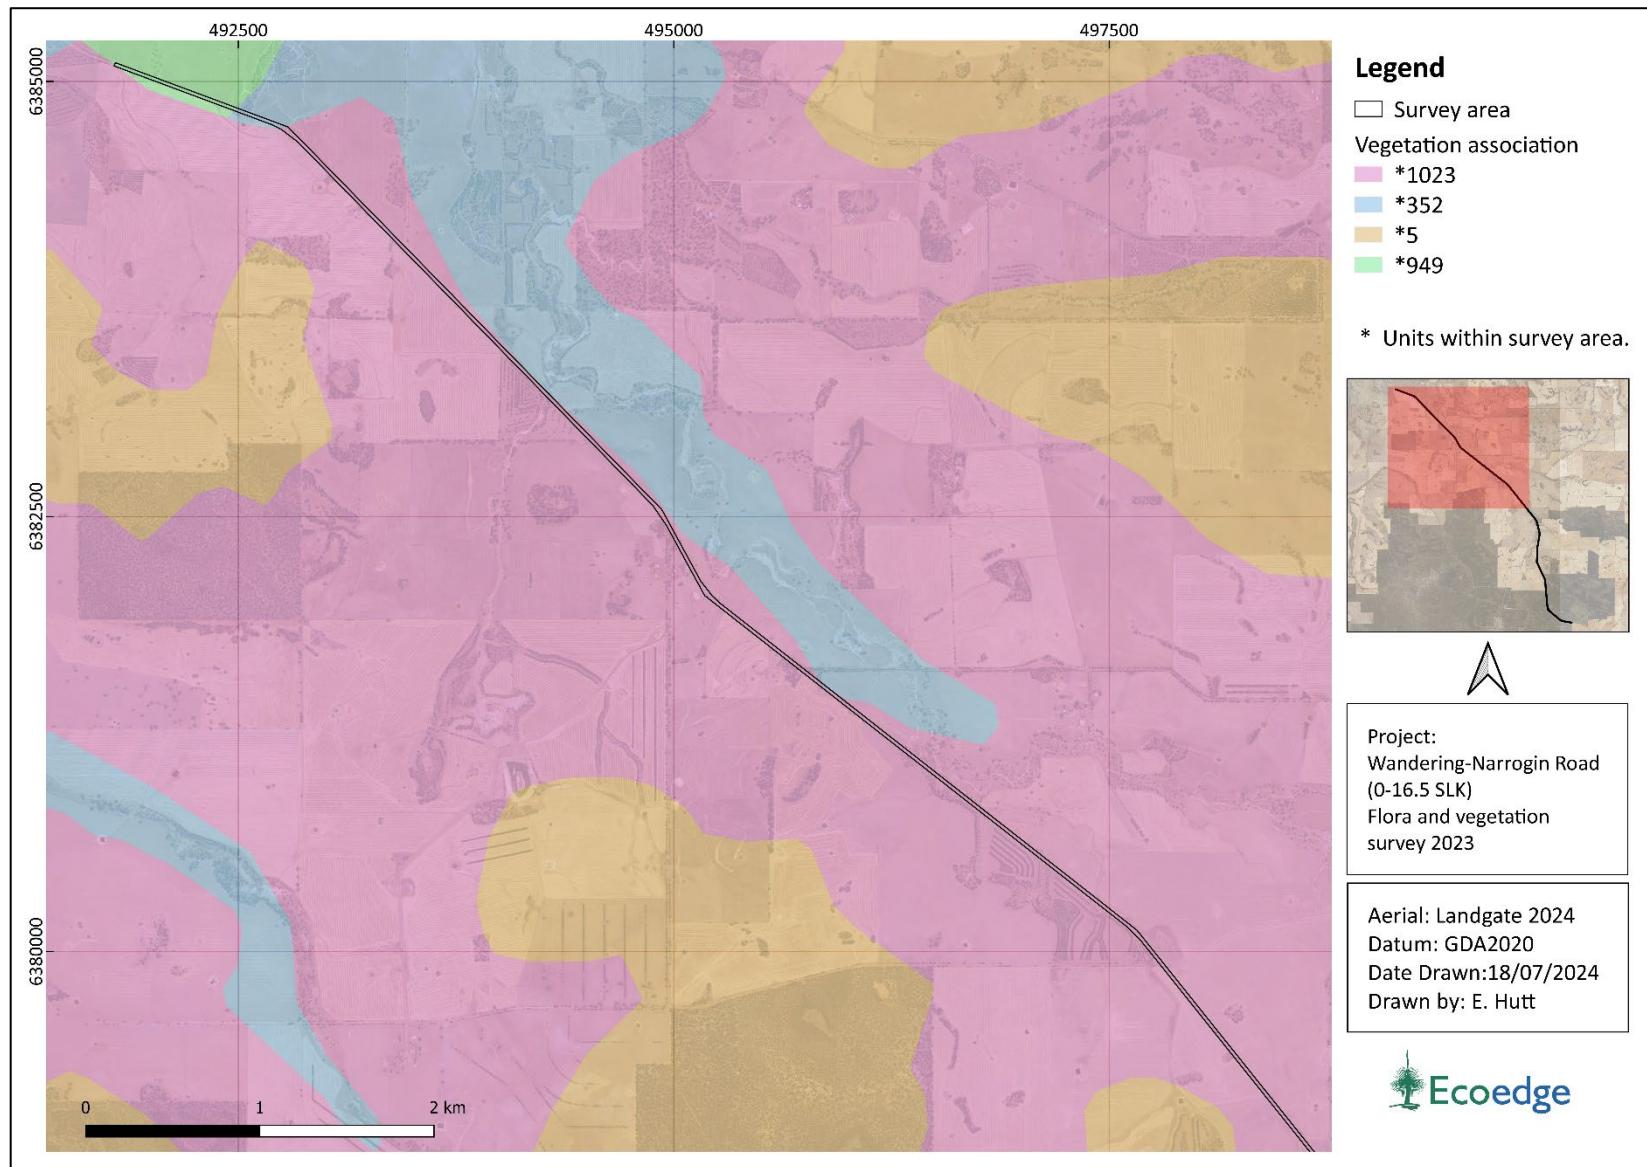

Figure 5. Vegetation associations mapped in and nearby the survey area (Beard et al. 2013).

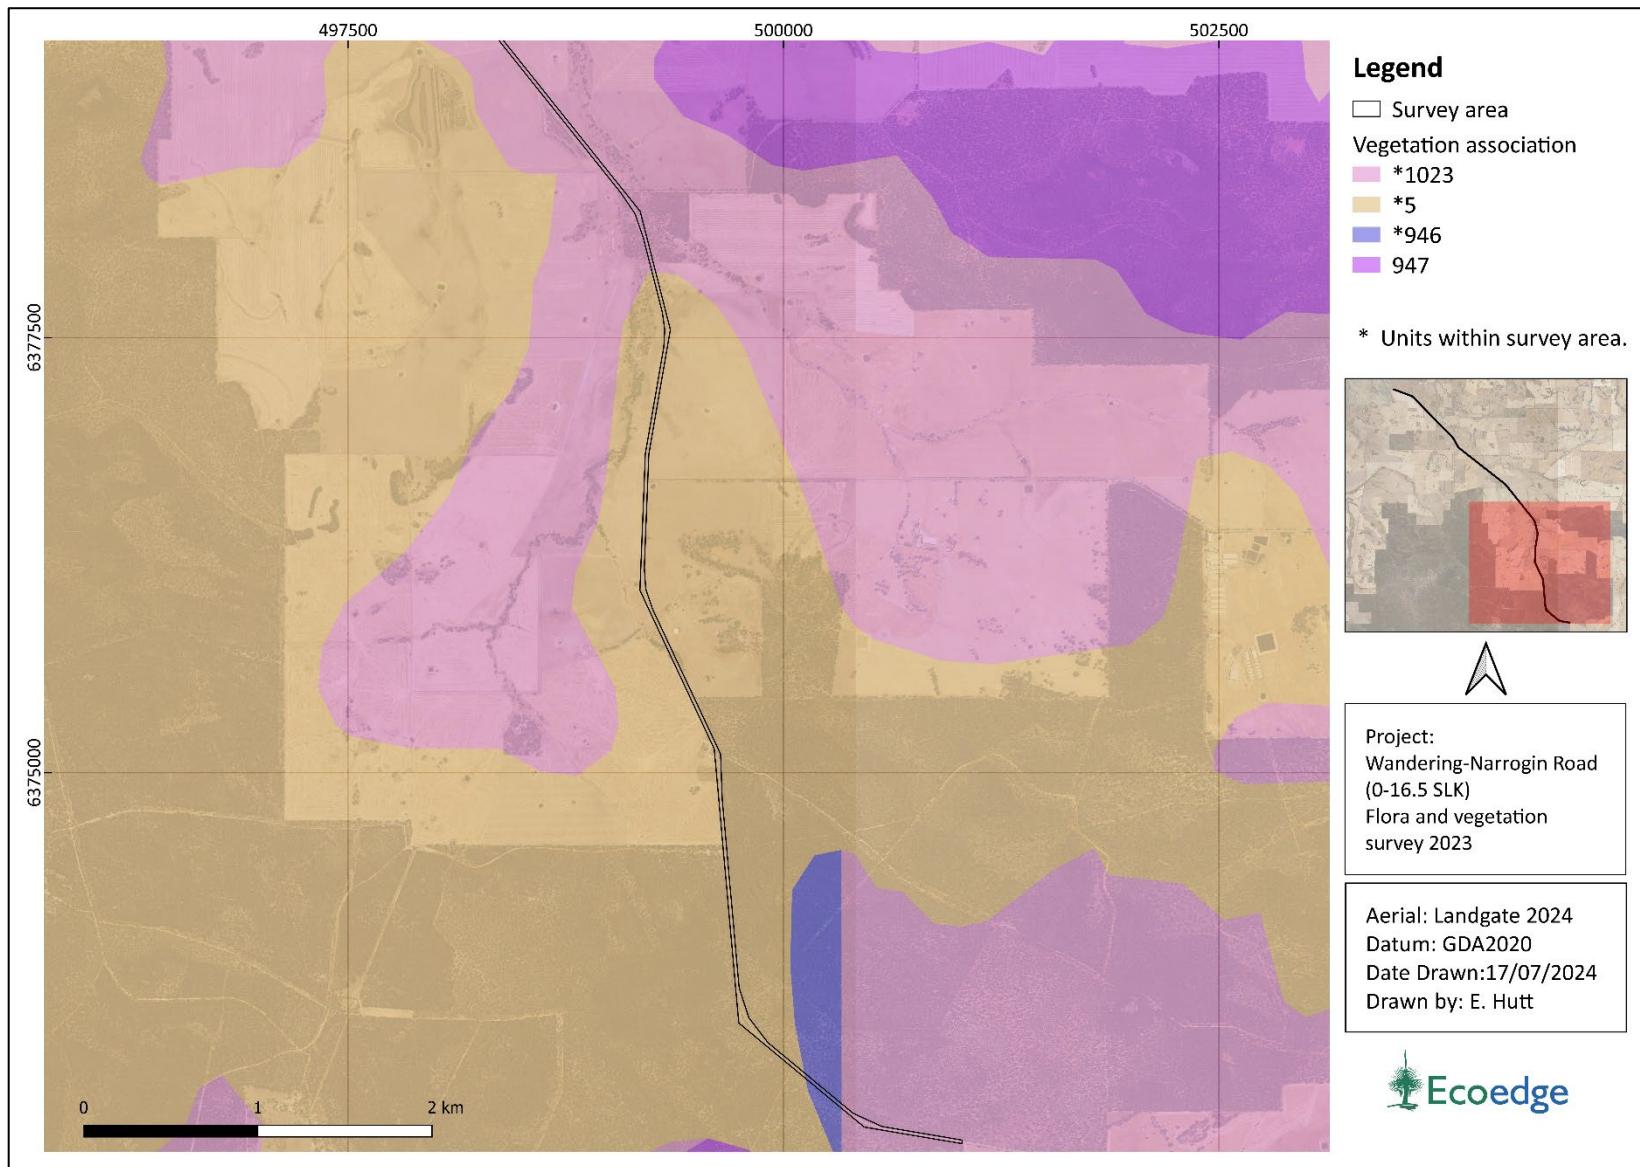

Figure 6. Vegetation associations mapped in and nearby the survey area (Beard et al. 2013).

3.3.2 Assessment of remaining extent against pre-European extent

In 2001, the Commonwealth of Australia stated National Targets and Objectives for Biodiversity Conservation, which recognised that the retention of 30%, or more, of the pre-clearing extent of each ecological community was necessary if Australia's biological diversity was to be protected (Environment Australia 2001).

In its report on the Statewide Vegetation Statistics incorporating the Comprehensive, Adequate and Representative (CAR) Reserve Analysis, the Government of Western Australia (GoWA) provides information on the pre-European and current extent of the ecological communities of Western Australia and reports on the status of the CAR reserve system for WA (GoWA 2019a). This system is also based on the national retention targets of 30% overall. Only reserves managed by DBCA under the *Conservation and Land Management Act 1984* are considered for inclusion in the "CAR Reserve Analysis". In Western Australia these statistics have been based on Beard's vegetation associations and Webb et al.'s (2016) updated vegetation complexes.

The percentage remaining of the pre-European extent vegetation and the percentage of current extent in DBCA managed land for the vegetation associations described for the survey area are presented in **Table 4**.

Currently there are no mapped vegetation complex datasets in the survey area's region therefore no comparison to retention targets can be presented.

From the five vegetation associations occurring across the survey area, Association 5 is the only association which meets or exceeds the 30% of pre-European extent vegetation remaining target across all levels. Associations 946 and 949 retain more than 30% of pre-European extent vegetation within the IBRA region and subregion of the Jarrah Forest and Northern Jarrah Forest, with Association 949 also retaining more than 30% within the Shire of Cuballing. Associations 352 and 1023 both fell below the target with less than 30% of pre-European extent vegetation remaining across all levels.

Association 1023 is just above the 10% threshold at a state level.

The red, orange and yellow shading in the tables indicates the status of the Commonwealth 30% retention target.

Status of the Commonwealth retention target	>30%	<30%	<10%

3.4 Threatened and Priority Ecological Communities

Ecological communities are defined by Western Australia's DBCA as "...naturally occurring biological assemblages that occur in a particular type of habitat. They are the sum of species within an ecosystem and, as a whole, they provide many of the processes which support specific ecosystems and provide ecological services." (DEC 2013).

Under Section 27 of the *Biodiversity Conservation Act 2016* (BC Act), the Western Australian Minister for Environment may list communities considered under significant threat as a TEC. These TECs can be listed under one of three conservation categories. These categories are Critically Endangered (CR), Endangered (EN), Vulnerable (VU). The BC Act also provides for listing communities as collapsed ecological communities.

Possible TECs that do not meet survey criteria are added to the DBCA's Priority ecological community lists under Priorities 1, 2 or 3 (referred to as P1, P2, P3). Ecological communities that are adequately known, are rare but not threatened, that meet criteria for near Threatened, or that have been recently removed from the Threatened list, are placed in Priority 4 (P4). These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5 (P5) (DEC 2013).

The current listing of Threatened and Priority ecological communities is specified in DBCA (2023a, 2023b). The conservation categories for these Threatened and Priority ecological communities are defined in **Appendix 5**.

TECs can also be listed under the Commonwealth EPBC Act. There are three categories of TEC under the EPBC Act: Critically Endangered (CR), Endangered (EN) and Vulnerable (VU) (DCCEEW 2022). These are defined in **Appendix 6**.

The desktop assessment, which included a Protected Matters Search (DCCEEW 2024) and review of DBCA TEC and PEC database extracts (DBCA 2024a), found one EPBC Act listed TEC and one State listed PEC within a 10 km buffer area. Outcomes of these searches are presented in **Table 5**. The results of the DBCA records are shown in **Figure 7** to **Figure 9**.²

3.5 Threatened and Priority flora

Species of flora and fauna are defined as having a Threatened or Priority conservation status where their extant populations are restricted geographically and/or under threat of possible extinction. The DBCA recognises these threats and consequently applies regulations towards population and species protection.

Threatened extant flora species are listed under Section 19 of the BC Act. They are ranked according to their level of threat using the International Union for Conservation of Nature (IUCN) Red List categories and criteria. The categories are Critically Endangered (CR), Endangered (EN), Vulnerable (VU). It is an offence to “take” or damage Threatened flora without Ministerial approval. Section 5 of the Act defines “to take” as “... to gather, pluck, cut, pull up, destroy, dig up, remove, harvest or damage flora by any means”.

Priority flora is under consideration for future declaration as “Threatened flora”, dependent on more information. Species classified as Priority One to Three (referred to as P1, P2 and P3) are in need of further survey to determine their status, while Priority Four (P4) species are adequately known rare or Threatened species that require regular monitoring.

Threatened flora lists are formally reviewed annually with the current listing updated on 1 May 2024 (DBCA 2024d). The Priority flora list is subject to ongoing review and update with updates regularly published on the Western Australian Herbarium FloraBase website.

Categories of Threatened and Priority flora as defined by the BC Act are presented in **Appendix 7** (DBCA 2019).

Threatened flora may also be protected under the Commonwealth EPBC Act and be listed in one of six categories. Definitions of these categories are summarised in **Appendix 8** (DCCEEW 2020).

Threatened or Priority flora occurring within 30 km of the survey area generated from an Atlas of Living Australia search (Atlas of Living Australia 2024), NatureMap search (DBCA 2024b) and a Protected Matters Search Tool query (DCCEEW 2024). DBCA and WA Herbarium Threatened and Priority flora data downloads (DBCA 2024c) are provided in **Appendix 9**.

3.6 Pre-survey rare flora assessment

Seventy-eight significant species were identified within this search area. Of these, two species were considered Likely to be found because there are historical records within 2km of the survey area. Fifty-seven were considered as Possibly occurring within the survey area and 19 as Unlikely to occur. There are no historical significant flora species recorded within the actual survey area (DBCA 2024b). The number of significant flora likelihood is summarised in **Table 6**. The locations of these significant flora within the 30 km study area are shown in **Figure 10** and those in proximity to the survey area are shown in **Figure 11** (DBCA 2024c).

A breakdown of the likelihood of occurrence (Possible and Likely) of all potential species according to conservation status is provided in **Table 7**, with the complete likelihood of pre and post likelihood occurrence assessment pre and post survey is provided in **Appendix 10**.

3.7 Wetlands and Watercourses

The survey area occurs within the spatial coverage of the ‘Wheatbelt Wetlands Stage 1 (DBCA-021)’ dataset. This dataset is under development therefore confirmation of presence of wetlands requires ground truthing and no conservation status has been assigned to the wetlands mapped in the dataset.

From this dataset it can be inferred that the survey area does not intersect any mapped wetlands but there are numerous minor watercourses such as the tributaries for the non-perennial Hotham River, which intersect at points across the survey area as shown in **Figure 12** (Crossman & Li 2005).

3.8 Environmentally Sensitive Areas

Environmentally Sensitive Areas (ESAs) are protected under the Environmental Protection (Clearing of Native Vegetation) Regulations 2004. They are selected for their environmental values at state or national levels (Government of Western Australia 2005). They include:

- Defined wetlands and riparian vegetation within 50 m
- Areas covered by Threatened Ecological Communities
- Area of vegetation within 50 m of Threatened flora
- Bush Forever sites
- Declared World Heritage property sites.

The southern end of the survey area occurs within a large ESA that extends over the Dryandra National Park and Lol Gray State Forest boundaries (DWER 2021) as shown in **Figure 13** and **Figure 14**. Other ESAs extend further across the southern portion of the 10 km study area, matching with more parcels of DBCA managed lands (**Figure 13**).

3.9 Other reports

The survey area occurs within the Keighery and Keighery flora surveys of the Dryandra Woodland incorporating the Lol Gray and Montague State Forests. A summary of the key outcomes of this report in regard to the Wandering-Narrogin Rd survey area is presented below.

Keighery, G. and Keighery, B. (2012). Vascular Flora of Dryandra Woodland (Lol Gray and Montague State Forests).

- The survey work was performed over a time period from 1983 to 2008.
- Surveys were conducted within the Dryandra Woodland, which is comprised of 27,947 hectares spread over 24 forest blocks.
- The authors considered at the time that over 90% of known flora had been recorded after these surveys.
- The report found at least 928 vascular taxa; of which 813 were native and 115 were weeds. Included were ten non-flowering plants (seven native and three weeds), 256 monocotyledons (219 natives and 37 weeds) and 662 dicotyledons (587 natives and 75 weeds).
- At the time of surveying, no declared rare flora were found but 18 Priority species were recorded:
 - *Acacia alata* var. *platyptera* (P4), *Acacia deflexa* (P4 now P3), *Andersonia bifida* (P2), *Anigozanthos bicolor* subsp. *extans* (P3), *Asterolasia pallida* subsp. *hyalina* (now *Asterolasia hyalina*) (P2), *Banksia cynaroides* (P4), *Banksia subpinnatifida* var. *subpinnatifida* (P2), *Chamelaucium croxfordiae* (now *Chamelaucium* sp. Dryandra) (P2), *Darwinia* sp. Dryandra (P4), *Darwinia thymoides* subsp. *bella* (now *Darwinia thymoides* subsp. St Ronans) (P4), *Gastrolobium ovalifolium* (P4), *Gastrolobium stipulare* (P4), *Gastrolobium tomentosum* (P4), *Grevillea crowleyae* (P2), *Hibbertia montana* (P4 but currently not listed), *Marianthus dryandra* (P2), *Persoonia hakeiformis* (P2) and *Xanthorrhoea brevistyla* (P4).
- Nine vegetation types were recorded during the surveying:
 - On the plateau are woodlands of Jarrah, mixed Jarrah Marri and Powderbark, *Eucalyptus drummondii* Mallee heaths or mixed tall Kwongan.
 - The slopes are dominated by Brown Mallet woodlands which grade into Wandoo and mixed Wandoo / Powderbark woodlands.
 - A few areas of flat sandy or duplex soils support Kwongan or Banksia woodlands.
 - The valley bottoms have low open woodlands of Jam, Marri or rarely York Gum and Flooded Gums.
 - Scattered through the woodlands are granite outcrops with their own distinctive flora usually edged by Rock She-oak low forests or woodlands.

- Heath on deep or duplex sandy loam soils corresponds to Coates vegetation association 10.
- Lateritic uplands (Powderbark Wandoo, *Eucalyptus drummondii* mallee heathlands and some Mallet areas) corresponds to Coates vegetation associations 3, 4 and 9.
- Jam woodlands, wet flats and creeklines corresponds to Coates vegetation associations 6 and 8.
- Disturbed areas (Paddocks, tracks, plantations, water points), except for vegetation association 4 not mapped by Coates or Beard.

4 Results

4.1 Flora

One hundred and sixty-nine vascular flora taxa were identified within the survey area (**Appendix 11**), thirty-eight of which were introduced species. The most represented plant families were Fabaceae, 23 taxa, five of which were introduced) Asteraceae (18 taxa, including five introduced species), Poaceae (22 taxa, including 16 introduced species) and Myrtaceae (12 taxa, including one introduced species).

4.1.1 Threatened and Priority flora

No Threatened or Priority flora were found within the survey area. Weeds or Declared Pest Plants

There were no Declared Pest Plants under the *Biosecurity and Agriculture Management Act 2007* or Weeds of National Significance (Department of Agriculture, Fisheries and Forestry, 2021³).

4.1.2 Post-Survey assessment

As stated in **sub-section 3.6**, above, seventy-eight significant species were identified within this search area. Of these, two were considered Likely, 57 as possibly occurring within the survey area and 19 as Unlikely to occur.

The post-survey of likelihood of occurrence determined that it was Unlikely that any of the 78 significant taxa occurred in the survey area. In 19 cases this was because suitable habitat didn't occur in the survey area. While for those taxa where the pre-survey likelihood was Likely or Possible the post-survey assessment was determined as Unlikely because, even though suitable habitat may have been present, a thorough survey at an appropriate time of year, failed to find the taxon.

4.2 Vegetation Units

The total area of remnant native vegetation in the survey area was 5.91 ha which was mapped as six vegetation units. The extent (in hectares) and condition of each vegetation unit within the survey area is provided in **Table 8**. The vegetation units are described in **Table 9** and mapped in **Appendix 12**.

Most of the remnant vegetation was in the first 3.37 km of the survey area as it passes through the Dryandra Woodlands NP. This is where vegetation units VU1, VU2 and VU3 (which were defined and described using a combination of overstorey and understorey taxa) are found.

³ Department of Agriculture, Fisheries and Forestry, 2021. Weeds of National Significance.
<http://www.environment.gov.au/biodiversity/invasive/weeds/weeds/lists/wons.html>

North of Dryandra Woodlands NP most native understorey species are absent, and the vegetation units are described using mainly overstorey species.

4.3 Vegetation Condition

Outside of Dryandra Woodland National Park at the southern end of the survey area where the vegetation was predominantly in Very Good or Degraded to Good condition there was very little vegetation that was not either Degraded or Completely Degraded (**Table 10**). Vegetation condition in the survey area is mapped in **Appendix 13**.

4.4 Multivariate Analysis of Floristic Quadrats

Two of the survey area quadrats, DRYAN01 and DRYAN02, were grouped with 11 quadrats from the comparison dataset that were mainly situated on shallow soils, derived from granite or were shallow duplex soils over an impeding clay layer and were within about 70 km of the survey area. The vegetation of this group is typically a Wando (Eucalyptus wandoo) woodland over *Acacia acuminata* and *Allocasuarina huegeliana* and a sparse shrub layer including *Hakea lissocarpa* and *Hibbertia commutata* over a rich layer of herbs and grasses including *Austrostipa elegantissima*, *Neurachne alopecuroidea*, *Blennospora drummondii*, *Dichopogon capillipes*, *Millotia tenuifolia*, *Podotheca angustifolia*, *Panaetia lessonii*, and *Trachymene pilosa*. Sedges from the *Lepidosperma leptostachyum* group may also be present. An extract of the dendrogram is provided in **Figure 15**.

Quadrat DRYAN03 was grouped with quadrats from the comparison dataset that were almost all situated on shallow duplex soils. Some of these quadrats were from within 10 km of the survey area, whereas others were over 100 km away in the northern and eastern Wheatbelt. However, this group was not floristically well defined, it had an overstorey of various species of trees, in the survey area it was of *Eucalyptus accedens* and *E. wandoo*. Understorey taxa were typically the shrubs *Melaleuca adnata* and *M. lateriflora*, the grasses *Neurachne alopecuroidea* and **Vulpia* spp. and the forbs *Dianella revoluta*, *Crassula colorata*, *Lomandra micrantha* and **Hypochaeris glabra*. An extract of the dendrogram is provided in **Figure 16**. Quadrat data and photographs are provided in **Appendix 14**.

Both the groups identified above are similar to the “Wando and mixed Wando / Powderbark woodlands” identified by Keighery and Keigher (2012).

4.5.1 Wheatbelt Woodland TEC PEC

An assessment of the survey area vegetation units against the DotE 2015 key diagnostic characteristics for the “Eucalypt Woodlands of the Western Australian Wheatbelt” TEC was undertaken with results presented in **Table 11** and mapped in **Appendix 15**. To meet the criteria to be an occurrence of the Wheatbelt Woodland TEC a patch of vegetation within the survey area needs to have one of the key eucalypt species (e.g. *E. wandoo*, *E. accedens*, *E. rufida*) and also be in Good-or-better condition.

The results show that the TEC only occurs within the Dryandra Woodlands NP (within units VU1, VU2 and VU3) at the southern end of the survey area. It forms two patches, on the eastern and western side of the road (Patch 1 and Patch 2).

A total of 1.59 ha of Wheatbelt Woodland TEC is situated within the survey area (**Table 11**).

The only other patch of Eucalypt woodland that meets the condition criterion (in this case Degraded to Good) is Patch 3 at the corner of Pennys Road. However, this is only about 1 ha and therefore does not satisfy the minimum area criterion of 2 ha (**Table 12**).

Table 11. Area of Wheatbelt TEC in Survey Area

Patch No.	Condition	Survey Area (Ha)
1	Degraded to Good	0.624
2	Very Good	0.961

Any occurrences of TEC PEC are obligated to be reported to DBCA via a reporting form (**Appendix 16**).

5 Discussion and conclusions

5.1 Significance of the flora

No Priority flora or Threatened flora were found. The two Priority 2 species (*Banksia subpinnatifida* var. *subpinnatifida* and *Leucopogon darlingensis* subsp. *rectus*) given a likelihood rating of “Likely” prior to the survey were not found even though they were searched for at an appropriate time of year.

5.2 Significance of the vegetation

5.2.1 Vegetation Units

Vegetation units VU1, VU2 and VU3 where they are in at least Degraded to Good condition meet the criteria for being occurrences of the Commonwealth-listed TEC, Eucalypt Woodlands of the Western Australian Wheatbelt. In total there was 1.59 ha of Wheatbelt Woodland TEC in the survey area (95% of which was in Very Good condition), all in that part of it which passes through the Dryandra Woodland NP.

North of the national park all areas of vegetation containing eucalypts typical of the Wheatbelt Woodlands TEC (e.g. *E. wandoo*, *E. loxophleba*) are too degraded, or are of insufficient area to be regarded as occurrences of the TEC.

Statistical analysis of the floristic data collected from three quadrats placed within the road reserve as it passed through Dryandra NP showed that the two southern quadrats aligned with other Wandoo woodlands situated on shallow granitic soils within 50 km of the survey area. The northernmost quadrat was aligned with a group of quadrats on shallow duplex soils that had only a few characteristic taxa and was widely distributed across the Wheatbelt.

5.2.2 Vegetation Associations

Five of Beard’s vegetation associations are mapped for the survey area, only one of which, Association 5, meets or exceeds the 30% of pre-European extent vegetation remaining target across all levels from LGA to State level.

The vegetation within the survey area is a good match with the mapped very broad Beard vegetation associations, except that Association 949 (Low woodland; Banksia) does not occur.

Association 1023 mapped at **Figure 5** and **Figure 6** was in Completely Degraded condition within the survey area and there is only 10.79% remaining Statewide in WA.

5.2.3 Wetlands or watercourse habitat

VU4 contains species typical of a watercourse or adjacent alluvial flats vegetation, particularly *Eucalyptus loxophleba* and *E. rufa* and the introduced rush, **Juncus acutus*. This vegetation was all in Completely Degraded condition mainly along the drainage lines.

5.2.4 Environmentally Sensitive Areas

The southern end of the survey area occurs within a large ESA that extends over the Dryandra National Park and Lol Gray State Forest boundaries.

Exemptions for the need to obtain a clearing permit under the Environmental Protection (Clearing of Native Vegetation) Regulation 2004 do not apply within the boundary of ESAs.

Appendix 1. Threatened and Priority flora likelihood of occurrence assessment rationale.

P1 Rating	Presurvey rationale	Post survey rationale
Recorded		Taxon was or has been recorded in the survey area.
Likely	Known to occur within 1 kilometre (km) of the survey area with suitable habitat known or predicted to occur within the survey area.	<p>The taxon is known to occur within one km of the survey area and very suitable habitat was present, but the taxon was not observed for one of the following reasons.</p> <ul style="list-style-type: none"> L1. The taxon was dormant at the time of survey and could therefore not be located. L2. The habitat was compromised, for example due to a recent fire. L3. The survey area is challenging to survey. The taxon is non- descript and difficult to find because, for example, it occurs in large areas of rocky granite outcrops, or within an expanse of open water.
Possible	Known to occur within 1 -10 km of the survey area with suitable habitat known or predicted to occur within the survey area.	<p>The taxon is known from within a five to ten km radius of the survey area, and suitable habitat for the species was present, but despite a thorough search being carried out, the species was not observed.</p> <p>The taxon may however be present for any of the following reasons.</p> <ul style="list-style-type: none"> P1. The taxon was dormant at the time of survey and could therefore not be located. P2. The habitat was compromised, for example, due to a recent fire. P3. The survey area is challenging to survey. The taxon is non- descript and difficult to find because, for example, it occurs in large areas of rocky granite outcrops, or within an expanse of open water.
Unlikely	Known or predicted to occur within 10 km of the survey area, but no suitable habitat is known or predicted to occur within the survey area.	<p>The taxon was not found and is unlikely to be present for one or more of the following reasons:</p> <ul style="list-style-type: none"> U1. No suitable habitat was observed, and the taxon is known to be restricted to a narrow and clearly defined habitat type. U2. Suitable or potential habitat (e.g., soil type, hydrology) was present and appropriately searched, but the taxon was not observed. U3. Suitable habitat present (e.g., soil type, hydrology), but these areas were too degraded for the taxon to occur, for example, due to weed invasion and/or clearing.

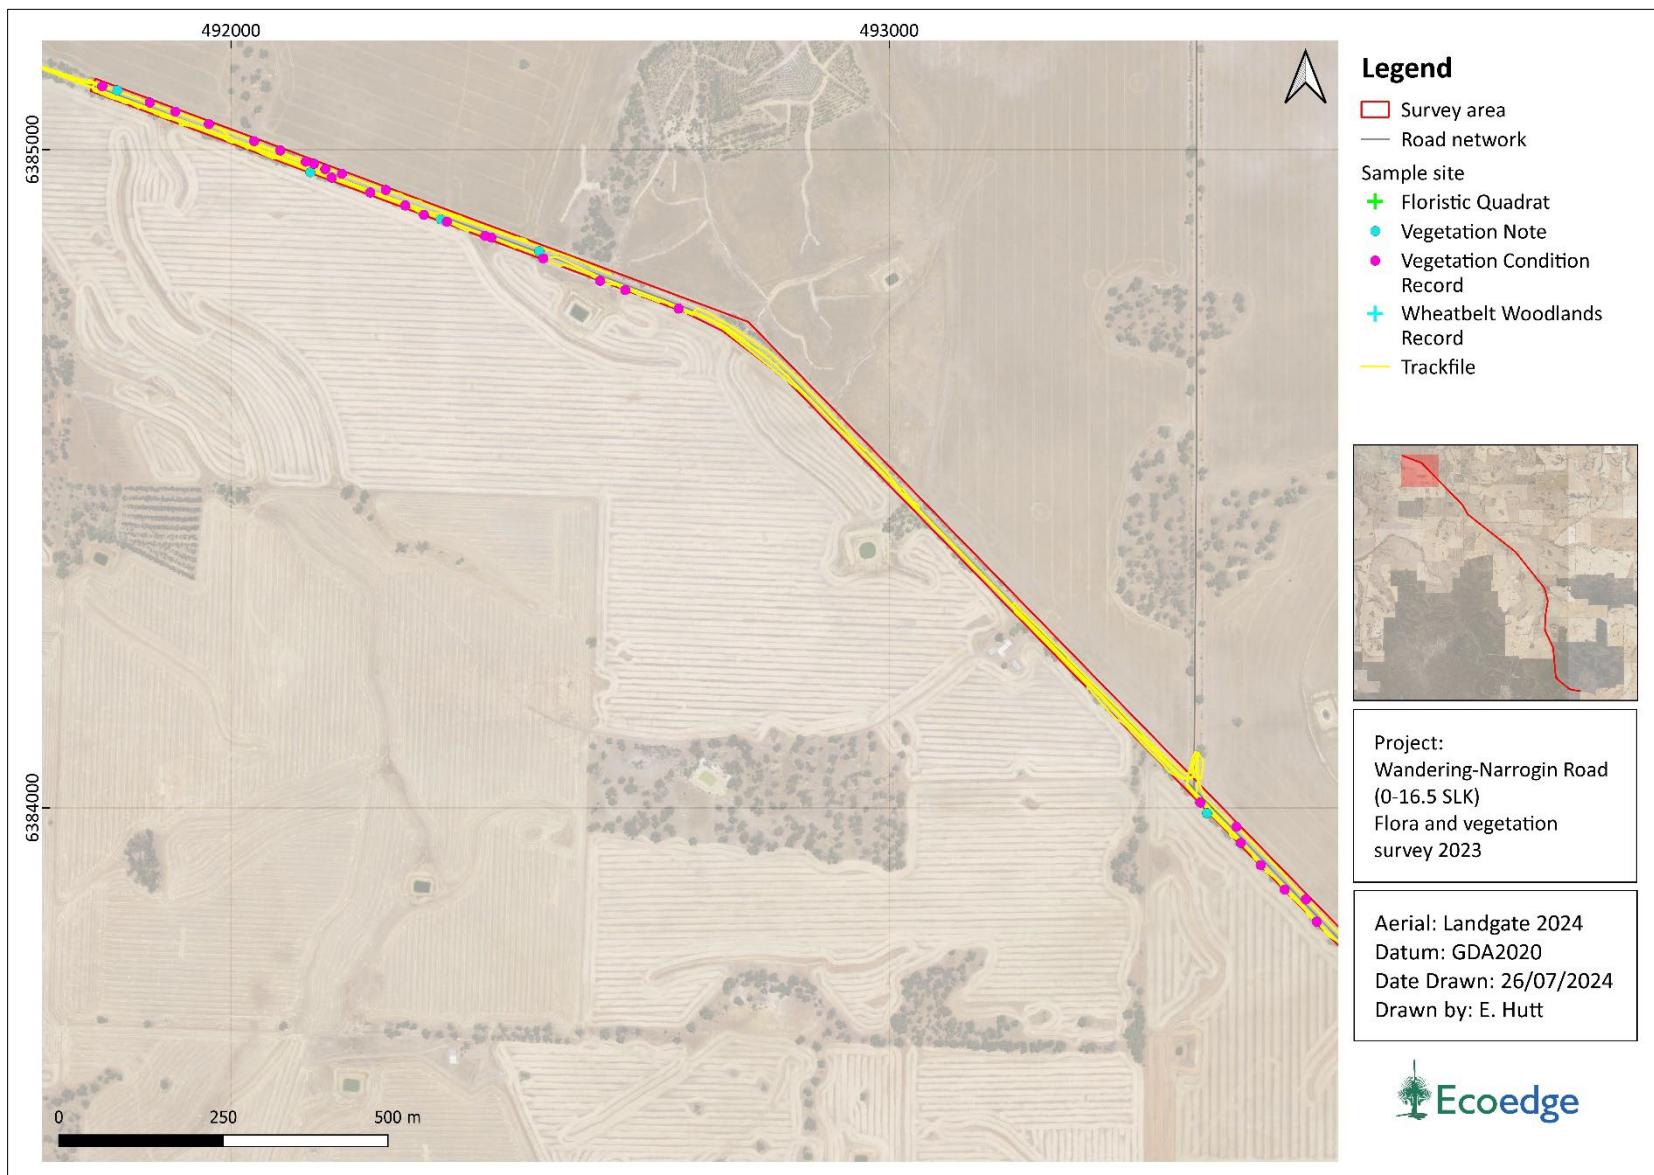

Example of application of pre and post-survey likelihood of occurrence

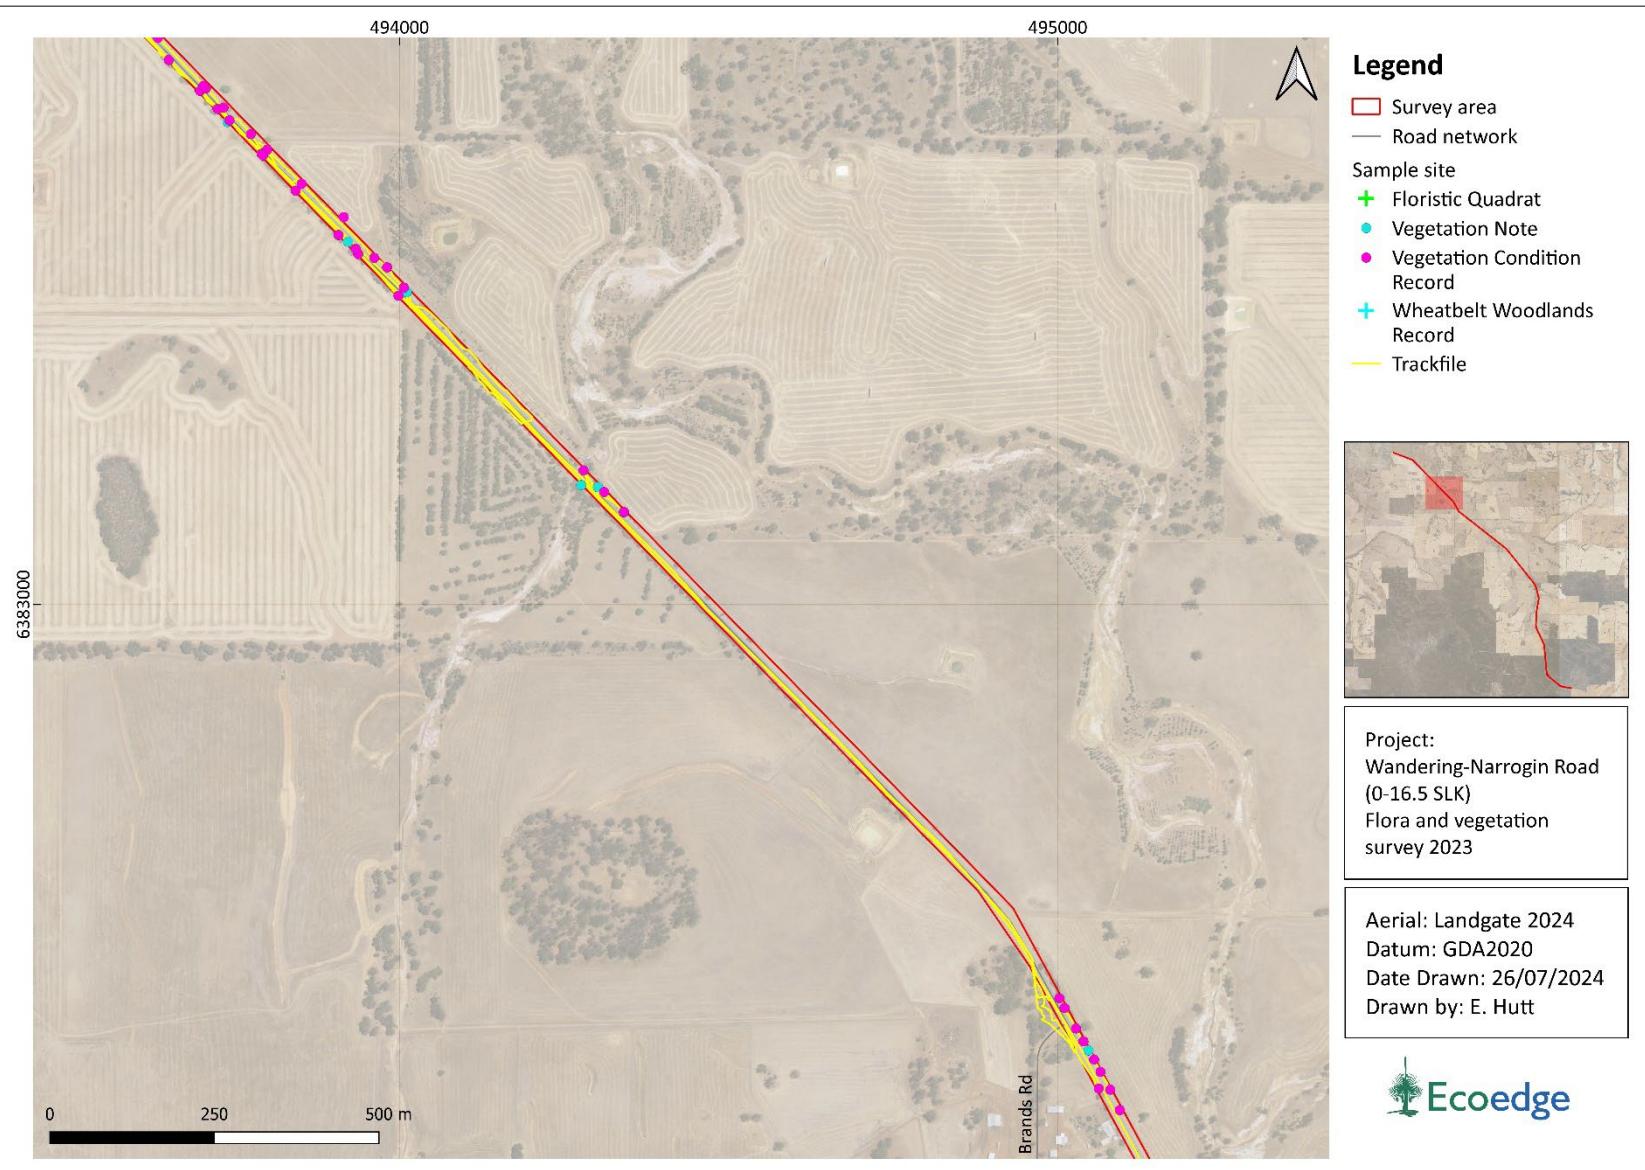

Taxon	Cons Status	Flowering	Description	Pre survey likelihood	Post Survey Likelihood
<i>Drakaea elastica</i>	T (EN)	Aug-Sept	Tuberous, perennial, herb, 0.12-0.3 m high. Fl. red, green, yellow. White or grey sand. Low-lying situations adjoining winter-wet swamps.	Likely	Unlikely (U2)

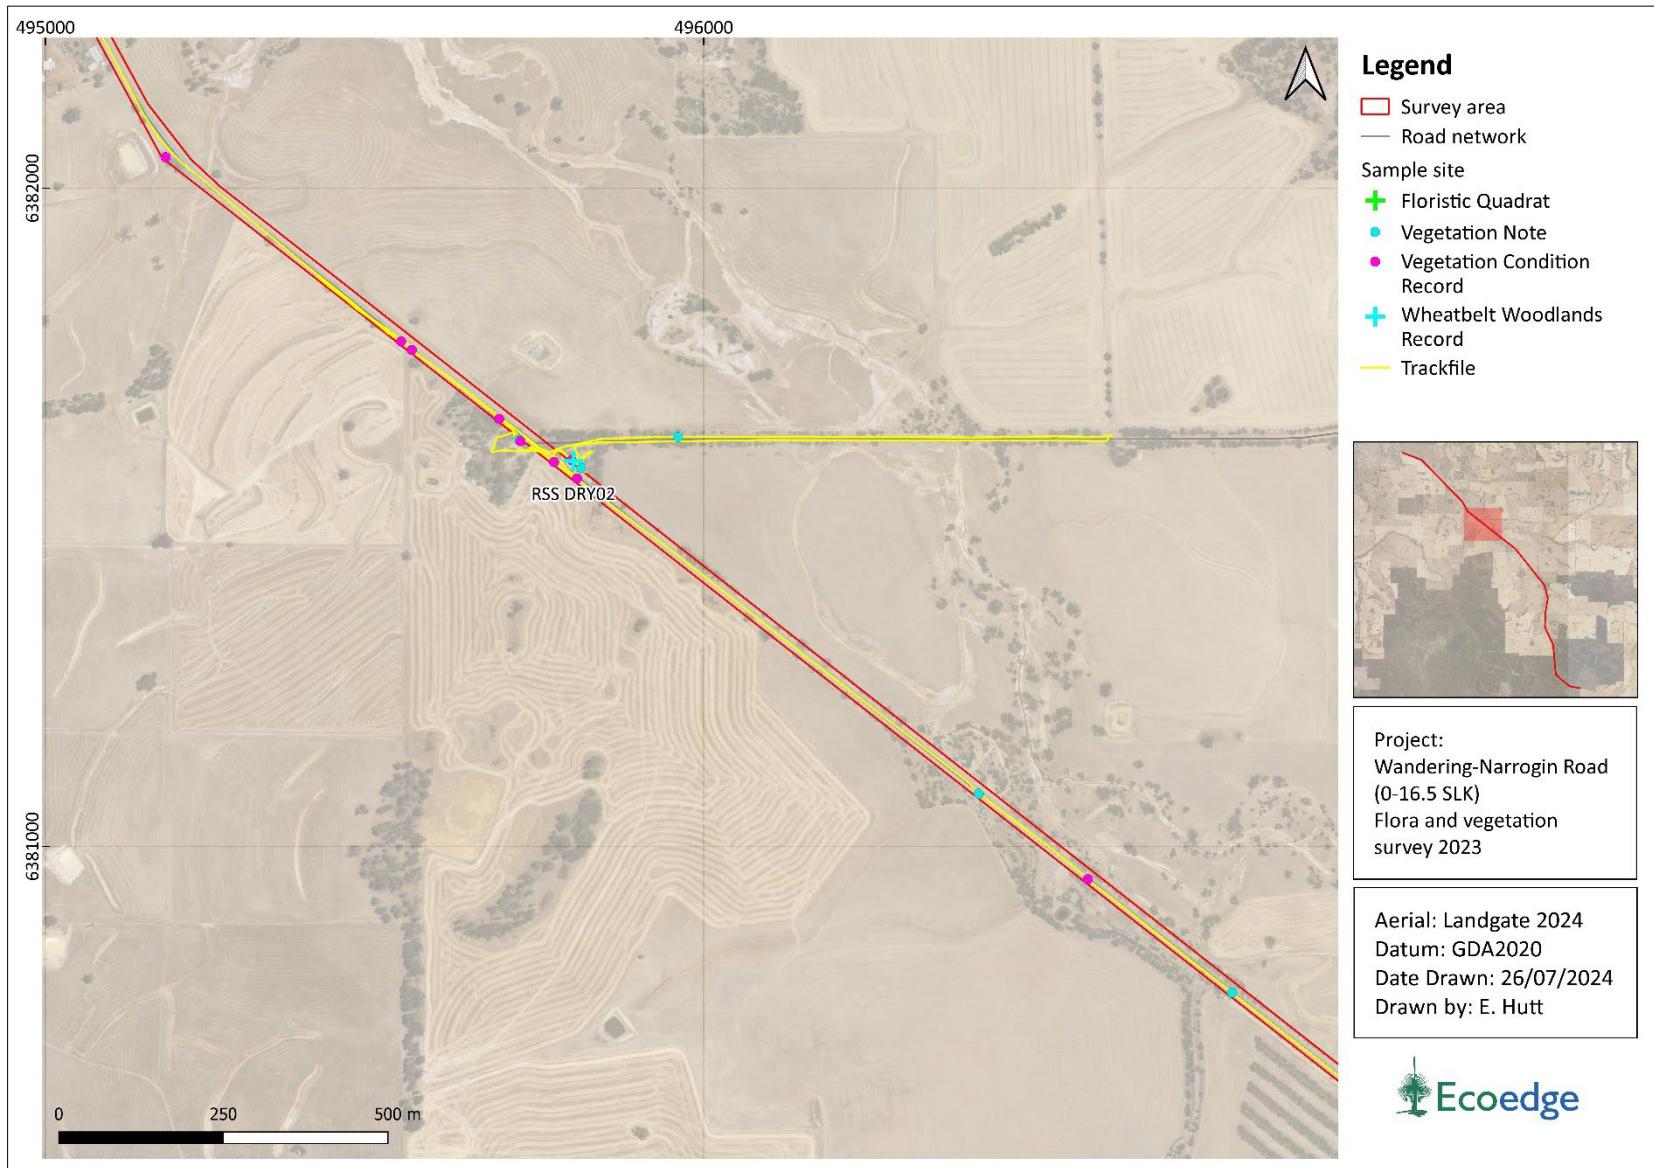

Appendix 2. Vegetation condition scale (EPA 2016).

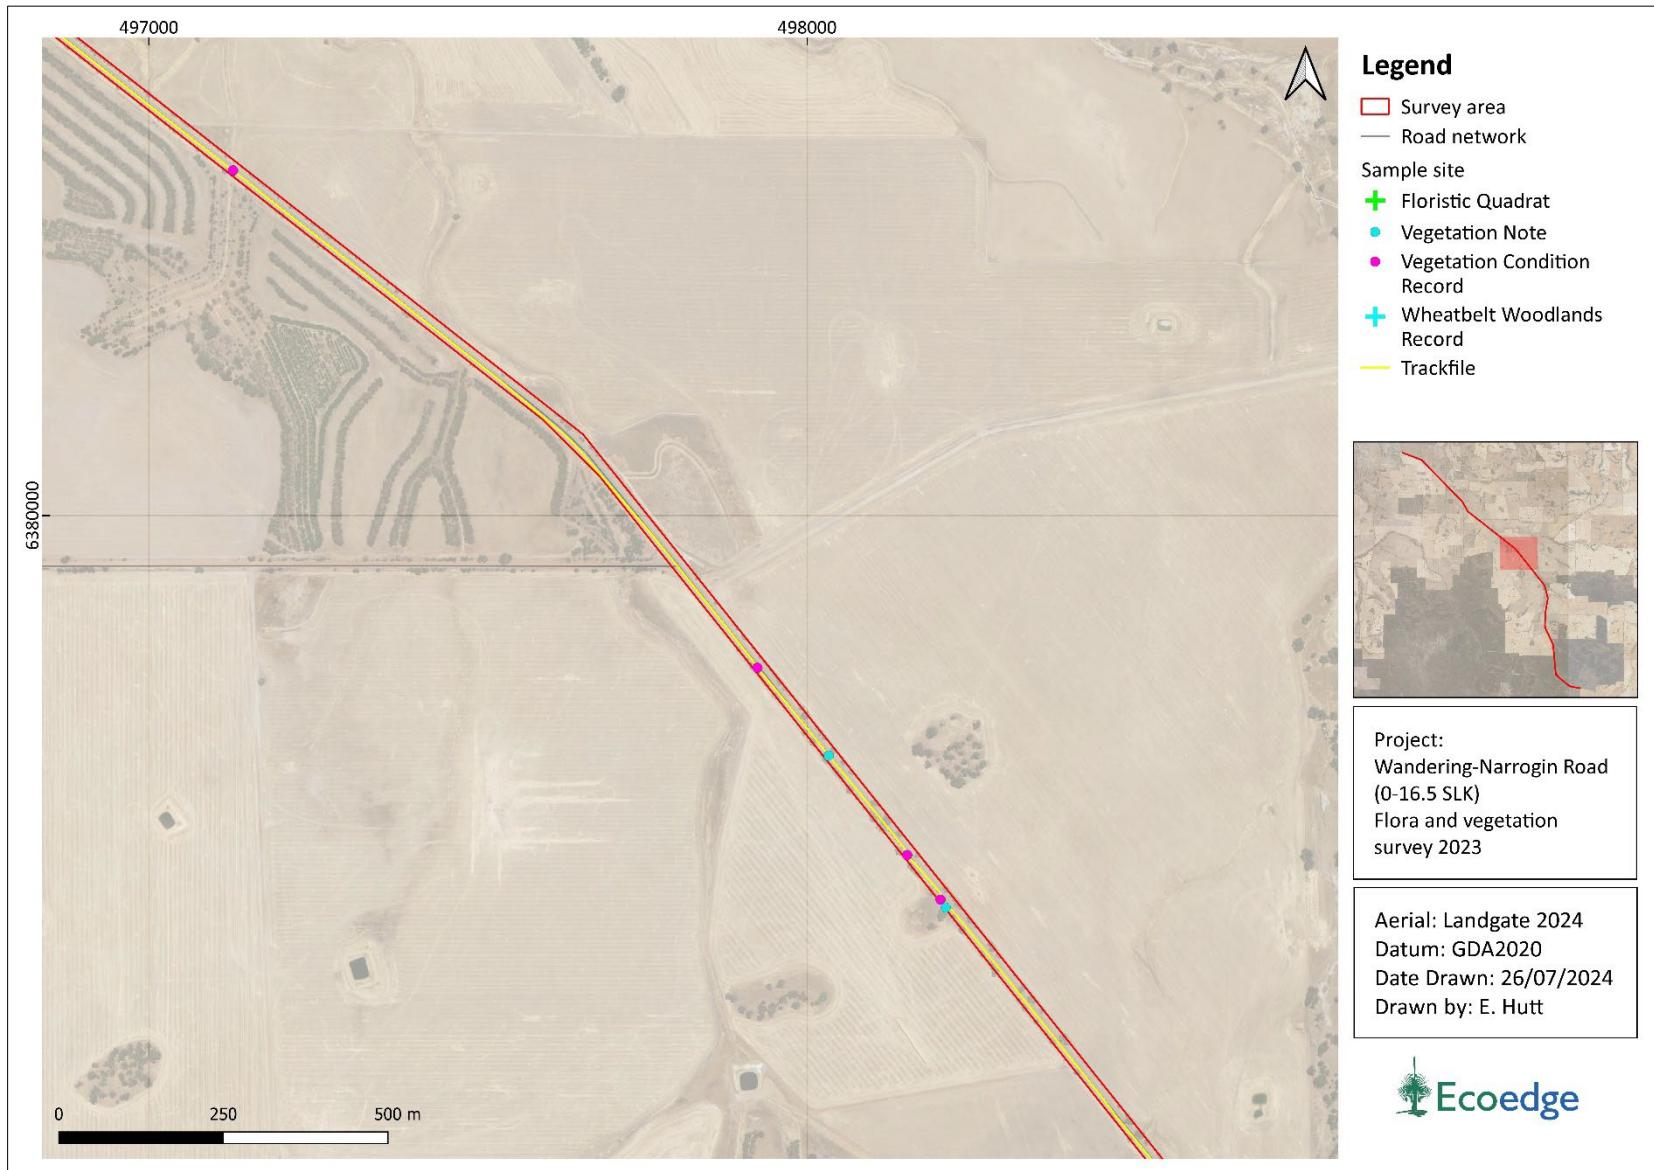

Vegetation Condition	South West and Interzone Botanical Provinces
Pristine	Pristine or nearly so, no obvious signs of disturbance or damage caused by human activities since European settlement.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species. Damage to trees caused by fire, the presence of non-aggressive weeds and occasional vehicle tracks.
Very Good	Vegetation structure altered, obvious signs of disturbance. Disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds at high density, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees and shrubs.

Conservation code	Category
(T) Threatened ecological community pursuant to Sect 27 of the <i>Biodiversity Conservation Act 2016</i>.	
T	<p>(T) CR – Critically endangered</p> <p>An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.</p>
	<p>(T) EN - Endangered</p> <p>An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.</p>
	<p>(T) VU - Vulnerable</p> <p>An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.</p>
(P) Priority species – possible threatened communities.	
P1	<p>Poorly known communities</p> <p>Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤5 occurrences or a total area of ≤ 100ha). Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.</p>

Conservation code	Category
P2	<p>Poorly known communities</p> <p>Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.</p>
P3	<p>Poorly known communities</p> <ul style="list-style-type: none"> a) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or: b) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or; c) communities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc. <p>Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.</p>
P4	<p>Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.</p> <ul style="list-style-type: none"> a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands. b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent. c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.
P5	<p>Conservation dependent ecological communities</p> <p>Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.</p>

Appendix 6. Categories of Threatened ecological communities under the EPBC Act.

Category	Definition
Critically endangered (CR)	If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).
Endangered (EN)	If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).
Vulnerable (VU)	If, at that time, an ecological community is not critically endangered or endangered but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

Appendix 7. Definitions of conservation codes for Threatened and Priority flora.

Conservation code	Category
(T) Threatened species pursuant to Sect 19 of the BC Act 2016.	
T	(T) CR – Critically endangered Threatened species considered to be “ <i>facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines</i> ”.
	(T) EN - Endangered Threatened species considered to be “ <i>facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines</i> ”.
	(T) VU - Vulnerable Threatened species considered to be “ <i>facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines</i> ”.
(P) Priority species – possible Threatened species.	
P1	Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.
P2	Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Conservation code	Category
P3	<p>Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.</p>
P4	<p>(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.</p> <p>(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.</p> <p>(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.</p>

Appendix 8. Categories of Threatened species under the EPBC Act.

Category	Definition
Extinct (Ex)	A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.
Extinct in the Wild (ExW)	A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time (a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or (b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.
Critically Endangered (CE)	A native species is eligible to be included in the critically endangered category at a particular time if, at that time, it is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.
Endangered (EN)	A native species is eligible to be included in the endangered category at a particular time if, at that time (a) it is not critically endangered; and (b) it is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.
Vulnerable (VU)	A native species is eligible to be included in the vulnerable category at a particular time if, at that time (a) it is not critically endangered or endangered; and (b) it is facing a high risk of extinction in the wild in the medium term future, as determined in accordance with the prescribed criteria.
Conservation Dependent (CD)	A native species is eligible to be included in the conservation dependent category at a particular time if, at that time, the species is the focus of a specific conservation program, the cessation of which would result in the species becoming vulnerable, endangered or critically endangered within a period of 5 years.

National Dynamic Land Cover

The Dynamic Land Cover Dataset is the first nationally consistent and thematically comprehensive land cover reference for Australia. It provides a base-line for reporting on change and trends in vegetation cover and extent. Information about land cover dynamics is essential to understanding and addressing a range of national challenges such as drought, salinity, water availability and ecosystem health. The data is a synopsis of land cover information for every 250m by 250m area of the country from April 2000 to April 2008. The classification scheme used to describe land cover categories in the Dataset conforms to the 2007 International Standards Organisation (ISO) land cover standard (19144-2). The Dataset shows Australian land covers clustered into 34 ISO classes. These reflect the structural character of vegetation, ranging from cultivated and managed land covers (crops and pastures) to natural land covers such as closed forest and open grasslands. [Ref1]

Family	Scientific Name	Common Name	No. Occurrences
Orchidaceae	<i>Caladenia flava</i>	Cowslip Orchid	115
Orchidaceae	<i>Ericksonella saccharata</i>	Sugar Orchid	78
Myrtaceae	<i>Eucalyptus accedens</i>	Powder Bark Wandoo	76
Proteaceae	<i>Banksia</i>	Honeysuckle	70
Fabaceae	<i>Bossiaea eriocarpa</i>	Common Brown Pea	70
Proteaceae	<i>Grevillea leptobotrys</i>	Tangled Grevillea	67
Proteaceae	<i>Grevillea tenuiflora</i>	Tassel Grevillea	65
Dilleniaceae	<i>Hibbertia hemignosta</i>		65
Proteaceae	<i>Petrophile heterophylla</i>		65
Myrtaceae	<i>Eucalyptus latens</i>	Narrow-leaved Red Mallee	60
Dilleniaceae	<i>Hibbertia commutata</i>		60
Santalaceae	<i>Santalum murrayanum</i>	Bitter Quandong	60
Proteaceae	<i>Synaphea flabelliformis</i>		58
Goodeniaceae	<i>Lechenaultia biloba</i>	Blue Leschenaultia	55
Orchidaceae	<i>Pterostylis recurva</i>	Jug Orchid	55
Myrtaceae	<i>Beaufortia incana</i>	Grey-leaved Beaufortia	53
Orchidaceae	<i>Pterostylis sanguinea</i>	Banded Greenhood	52
Proteaceae	<i>Banksia nobilis</i> subsp. <i>nobilis</i>		51
Fabaceae	<i>Gastrolobium microcarpum</i>	Sandplain Poison	50
Fabaceae	<i>Pultenaea pauciflora</i>	Narrogin Pea	50
Myrtaceae	<i>Eucalyptus drummondii</i>	Drummonds Gum	49
Fabaceae	<i>Gastrolobium parviflorum</i>	Box Poison	47
Styliadiaceae	<i>Stylium</i>	Trigger-plants	47
Cyperaceae	<i>Lepidosperma</i>	Swordsgedges	45
Amaranthaceae	<i>Ptilotus manglesii</i>	Pom Poms	45

Myrtaceae	Corymbia calophylla	Marri	44
Fabaceae	Gastrolobium calycinum	York Road Poison	44
Proteaceae	Hakea lissocarpa	Honey Bush	44
Asteraceae	Lawrencella rosea		43
Styliadiaceae	Styliodium uniflorum subsp. uniflorum		43
Orchidaceae	Caladenia reptans	Little Pink Fairies	42
Proteaceae	Banksia nobilis		41
Proteaceae	Banksia stuposa		41
Goodeniaceae	Dampiera obliqua		41
Fabaceae	Jacksonia epiphyllum		41
Poaceae	Neurachne alopecuroidea	Fox-tail Mulga-grass	41
Orchidaceae	Pterostylis vittata	Banded Greenhood	41
Celastraceae	Stackhousia monogyna	Creamy Candles	41
Proteaceae	Isopogon dubius	Pincushion Coneflower	40
Myrtaceae	Eucalyptus aspersa	Forest Mallee	39
Myrtaceae	Hypocalymma angustifolium	White Myrtle	39
Proteaceae	Petrophile divaricata		39
Orchidaceae	Pheladenia deformis	Blue Beard	39
Ericaceae	Astroloma epacridis		38
Proteaceae	Banksia squarrosa subsp. squarrosa		38
Goodeniaceae	Lechenaultia formosa	Red Leschenaultia	38
Proteaceae	Petrophile serruriae		38
Orchidaceae	Pterostylis hamiltonii	Red-veined Shell Orchid	38
Hemerocallidaceae	Stypandra glauca	Blind Grass	38
Droseraceae	Drosera macrantha	Bridal Rainbow	37
Myrtaceae	Eucalyptus		37
Asteraceae	Genus		37
Fabaceae	Acacia gemina		36
Fabaceae	Acacia	Mulga	36
Casuarinaceae	Allocasuarina huegeliana	Rock Sheoak	36
Droseraceae	Drosera glanduligera	Pimpernel Sundew	36
Orchidaceae	Pterostylis sargentii	Frog Greenhood	36
Orchidaceae	Thelymitra antennifera	Lemon-scented Sun Orchid	36
Goodeniaceae	Dampiera		35
Droseraceae	Drosera menziesii	Pink Rainbow	35
Proteaceae	Banksia cuneata	Quairading Banksia	34
Proteaceae	Banksia nivea subsp. nivea		34
Orchidaceae	Caladenia falcata	Green Spider Orchid	33
Haemodoraceae	Conostylis setigera	Bristly Cottonhead	33
Myrtaceae	Melaleuca tuberculata var. tuberculata		33
	Tracheophyta		33
Ericaceae	Astroloma pallidum	Kick Bush	32
Orchidaceae	Caladenia xantha	Primrose Spider Orchid	32
Orchidaceae	Diuris porrifolia	Rosy-cheeked Donkey Orchid	32
Myrtaceae	Eucalyptus wandoo	White Gum	32
Fabaceae	Gastrolobium spinosum	Prickly Poison	32
Proteaceae	Petrophile	Conesticks	32
Orchidaceae	Pterostylis	Greenhoods	32
Fabaceae	Acacia acuminata	Raspberry Jam	31
Fabaceae	Fabaceae		31
Asteraceae	Podolepis lessonii		31
Asparagaceae	Sowerbaea laxiflora	Vanilla Lily	31
Proteaceae	Banksia columnaris		30
Proteaceae	Banksia squarrosa		30
Myrtaceae	Eucalyptus caesia	Gungurru	30
Myrtaceae	Eucalyptus exilis	Boyagin Mallee	30

Proteaceae	Isopogon crithmifolius	30
Ericaceae	Leucopogon darlingensis subsp. rectus	30
Fabaceae	Acacia adjutrices	29
Myrtaceae	Eucalyptus falcata	29
Dilleniaceae	Hibbertia	29
Proteaceae	Adenanthera cygnorum subsp. cygnorum	28
Orchidaceae	Caladenia barbarossa	28
Goodeniaceae	Dampiera lavandulacea	28
Myrtaceae	Eucalyptus wandoo subsp. wandoo	28
Orchidaceae	Caladenia reptans subsp. reptans	27
Orchidaceae	Caladenia	27
Fabaceae	Dillwynia laxiflora	27
Droseraceae	Drosera subhirtella	27
Proteaceae	Grevillea monticola	27
Proteaceae	Hakea	27
Malvaceae	Lasiopetalum rotundifolium	Round-leaf Lasiopetalum 27
Xanthorrhoeaceae	Xanthorrhoea drummondii	27
Loranthaceae	Amyema miquelii	Box Mistletoe 26
Proteaceae	Banksia sphaeroarpa var. caesia	26
Boryaceae	Borya sphaerocephala	Pincushions 26
Orchidaceae	Caladenia flava subsp. flava	Cowslip Orchid 26
Orchidaceae	Cyanicula gemmata	Blue China Orchid 26
Droseraceae	Drosera hyperostigma	26
Orchidaceae	Prasophyllum gracile	Little Laughing Leek Orchid 26
Stylidiaceae	Stylium caricifolium	Milkmaids 26
Elaeocarpaceae	Tetrapetra virgata	26
Araliaceae	Trachymene pilosa	Dwarf Trachymene 26
Fabaceae	Acacia celastrifolia	Glowing Wattle 25
Haemodoraceae	Anigozanthos bicolor subsp. extans	25
Proteaceae	Banksia subpinnatifida var. subpinnatifida	25
Asteraceae	Blennospora drummondii	Dwarf Beauty-heads 25
Myrtaceae	Chamelaucium sp. Dryandra (D.Rose 446)	25
Goodeniaceae	Dampiera lindleyi	25
Orchidaceae	Diuris corymbosa	Common Donkey Orchid 25
Myrtaceae	Eucalyptus astringens	Brown Mallet 25
Myrtaceae	Eucalyptus incrassata	Ridge-fruited Mallee 25
Proteaceae	Hakea prostrata	Harsh Hakea 25
Iridaceae	Orthrosanthus laxus	Morning Iris 25
Asparagaceae	Thysanotus patersonii	Twining Fringe Lily 25
Proteaceae	Banksia proteoides	24
Proteaceae	Banksia sessilis	24
Asparagaceae	Chamaescilla corymbosa	Blue Stars 24
Myrtaceae	Eucalyptus astringens subsp. astringens	Brown Mallet 24
Asteraceae	Olearia rufa	Rough Daisy Bush 24
Ericaceae	Styphelia	Maal 24
Casuarinaceae	Allocasuarina humilis	Dwarf Sheoak 23
Fabaceae	Chorizema dicksonii	Yellow-eyed Flame Pea 23
Droseraceae	Drosera bulbosa	Red-leaved Sundew 23
Asteraceae	Hypochaeris glabra	Smooth Catsear 23
Fabaceae	Acacia pulchella	Prickly Moses 22
Fabaceae	Acacia stenoptera	22
Proteaceae	Banksia armata	22
Proteaceae	Banksia sphaeroarpa	Fox Banksia 22
Myrtaceae	Calytrix leschenaultii	Maalyaan Djinda 22
Asparagaceae	Chamaexeros serra	22
Droseraceae	Drosera spilos	22

Asteraceae	Helichrysum leucopsideum	Satin Everlasting	22
Proteaceae	Isopogon	Drumsticks	22
Fabaceae	Kennedia prostrata	Running Postman	22
Proteaceae	Lambertia ilicifolia	Holly-leaved Lambertia	22
Fabaceae	Mirbelia dilatata	Holly-leaved Mirbelia	22
Proteaceae	Proteaceae		22
Proteaceae	Synaphea		22
Pottiaceae	Triquetrella papillata		22
Poaceae	Austrostipa elegantissima	Feather Spear-grass	21
Proteaceae	Banksia cynaroides		21
Restionaceae	Desmocladus asper		21
Myrtaceae	Melaleuca	Tea-tree	21
Asteraceae	Rhodanthe citrina		21
Styliadiaceae	Styliodium androsaceum		21
Styliadiaceae	Styliodium ciliatum	Golden Triggerplant	21
Asteraceae	Asteraceae		20
Proteaceae	Banksia fraseri var. fraseri		20
Orchidaceae	Diuris brachyscapa		20
Cyperaceae	Gahnia australis		20
Goodeniaceae	Goodenia trinervis		20
Myrtaceae	Leptospermum	Tea Tree	20
Asparagaceae	Lomandra micrantha subsp. micrantha		20
Proteaceae	Petrophile imbricata		20
Orchidaceae	Thelymitra graminea	Shy Sun Orchid	20
Xanthorrhoeaceae	Xanthorrhoea brevistyla		20
Asteraceae	Arctotheca calendula	African Marigold	19
Orchidaceae	Caladenia longiclavata	Clubbed Spider Orchid	19
Proteaceae	Conospermum filifolium subsp. filifolium		19
Haemodoraceae	Conostylis pusilla		19
Myrtaceae	Eucalyptus uncinata	Hook Leaved Mallee	19
Proteaceae	Hakea trifurcata	Two-leaf Hakea	19
Fabaceae	Isotropis cuneifolia	Granny Bonnets	19
Ericaceae	Leucopogon fimbriatus		19
Styliadiaceae	Levenhookia pusilla	Midget Stylewort	19
Proteaceae	Petrophile squamata		19
	Plantae		19
Styliadiaceae	Styliodium rhynchocarpum	Black-beaked Triggerplant	19
Styliadiaceae	Styliodium uniflorum	Pincushion Triggerplant	19
Ericaceae	Styphelia tenuiflora	Common Pinheath	19
Dilleniaceae	Dilleniaceae		18
Orchidaceae	Diuris	Donkey Orchids	18
Myrtaceae	Eucalyptus macrocarpa	Blue Bush	18
Goodeniaceae	Goodeniaceae	Fan Flower	18
Proteaceae	Grevillea hookeriana subsp. hookeriana		18
Restionaceae	Loxocarya striata		18
Myrtaceae	Melaleuca tuberculata		18
Ericaceae	Styphelia acervata		18
Malvaceae	Thomasia montana	Hill Thomasia	18
Asparagaceae	Arthropodium	Vanilla Lilies	17
Proteaceae	Banksia sessilis var. sessilis		17
Orchidaceae	Caladenia footeana	Crimson Spider Orchid	17
Fabaceae	Daviesia rhombifolia		17
Orchidaceae	Elythranthera brunonis	Purple Enamel Orchid	17
Proteaceae	Grevillea 'RF05'		17
Proteaceae	Hakea undulata		17
Campanulaceae	Isotoma hypocrateriformis	Woodbridge Poison	17

Asteraceae	Lagenophora huegelii	Coarse Bottle-daisy	17
Orchidaceae	Leptoceras menziesii	Hare's Ears Orchid	17
Phyllanthaceae	Poranthera microphylla	Small Poranthera	17
Proteaceae	Synaphea boyaginiensis		17
Fabaceae	Acacia microbotrya	Manna Wattle	16
Fabaceae	Acacia saligna	Golden Wreath Wattle	16
Poaceae	Briza maxima	Great Quaking Grass	16
Myrtaceae	Calothamnus rupestris	Mouse Ears	16
Fabaceae	Chorizema aciculare subsp. laxum		16
Rhamnaceae	Cryptandra nutans		16
Fabaceae	Gompholobium marginatum		16
Cyperaceae	Lepidosperma costale		16
Myrtaceae	Leptospermum erubescens	Roadside Teatree	16
Primulaceae	Lysimachia arvensis		16
Orchidaceae	Pterostylis concava	Cupped Banded Greenhood	16
Fabaceae	Sphaerolobium medium		16
Styliadiaceae	Stylium eriopodium		16
Styliadiaceae	Stylium piliferum	Common Butterfly Triggerplant	16
Colchicaceae	Wurmbea tenella	Eight Nancy	16
Fabaceae	Acacia chryscephala		15
Fabaceae	Acacia lasiocarpa var. sedifolia		15
Rutaceae	Asterolasia hyalina		15
Proteaceae	Banksia armata var. armata		15
Fabaceae	Bossiaea spinescens		15
Myrtaceae	Callistemon phoeniceus	Lesser Bottlebrush	15
Asteraceae	Chrysanthemoides monilifera subsp. monilifera	Boneseed	15
Myrtaceae	Darwinia carnea	Narrogin Bell	15
Myrtaceae	Eucalyptus pachyloma	Kalgan Plains Mallee	15
Fabaceae	Faboideae		15
Fabaceae	Gastrolobium ovalifolium	Runner Poison	15
Haloragaceae	Glischrocaryon		15
Dilleniaceae	Hibbertia exasperata		15
Dilleniaceae	Hibbertia hibbertioides		15
Dilleniaceae	Hibbertia montana		15
Cyperaceae	Lepidosperma leptostachyum		15
Iridaceae	Orthrosanthus laxus var. gramineus		15
Orchidaceae	Prasophyllum cypnochilum	Pouched Leek Orchid	15
Proteaceae	Proteoideae		15
Amaranthaceae	Ptilotus declinatus	Curved Mulla-mulla	15
Celastraceae	Stackhousia pubescens		15
Rhamnaceae	Trymalium ledifolium var. lineare		15
Fabaceae	Acacia pulchella var. glaberrima		14
Rutaceae	Asterolasia squamuligera		14
Ericaceae	Astroloma compactum		14
Proteaceae	Banksia prionotes	Acorn Banksia	14
Rutaceae	Boronia capitata	Cluster Boronia	14
Leucobryaceae	Campylopus introflexus		14
Myrtaceae	Eucalyptus loxophleba subsp. loxophleba	York Gum	14
Fabaceae	Gastrolobium obovatum		14
Fabaceae	Gastrolobium		14
Apiaceae	Homalosciadium homalocarpum		14
Asparagaceae	Laxmannia squarrosa		14
Ericaceae	Leucopogon		14
Asparagaceae	Lomandra effusa	Irongrass	14
Pittosporaceae	Marianthus bicolor		14
Olacaceae	Olax benthamiana		14

Oxalidaceae	Oxalis purpurea	Large-flower Wood-sorrel	14
Orchidaceae	Pterostylis occulta	Little Frog Orchid	14
Poaceae	Rytidosperma setaceum		14
Cyperaceae	Schoenus nanus	Tiny Bog-sedge	14
Goodeniaceae	Velleia trinervis		14
Fabaceae	Acacia amputata		13
Fabaceae	Acacia insolita subsp. recurva		13
Fabaceae	Acacia thieleana	Thiele's Wattle	13
Pittosporaceae	Billardiera fusiformis	Bluebell Creeper	13
Orchidaceae	Caladenia hirta subsp. rosea	Pink Candy Orchid	13
Orchidaceae	Calochilus stramenicola	Wandoo Beard Orchid	13
Myrtaceae	Calytrix cravenii		13
Goodeniaceae	Dampiera linearis	Wedge-leaved Dampiera	13
Fabaceae	Daviesia cardiophylla		13
Fabaceae	Daviesia decurrens	Thorny Bitter-pea	13
Droseraceae	Drosera sp. Branched styles (S.C.Coffey 193)		13
Poaceae	Ehrharta longiflora	Annual Veldt Grass	13
Fabaceae	Gastrolobium stipulare		13
Haloragaceae	Glischrocaryon aureum	Common Popflower	13
Fabaceae	Jacksonia restioides		13
Santalaceae	Leptomeria ellytes		13
Pittosporaceae	Marianthus erubescens	Red Billardiera	13
Asteraceae	Millotia tenuifolia	Soft Millotia	13
Myrtaceae	Myrtaceae	Myrtle Family (part)	13
Thymelaeaceae	Pimelea	Rice Flower	13
Asteraceae	Rhodanthe manglesii		13
Styliadiaceae	Styliadiaceae		13
Styliadiaceae	Styliodium leptophyllum	Needle-leaved Triggerplant	13
Araliaceae	Trachymene cyanopetala	Purple Parsnip	13
Asteraceae	Ursinia anthemoides	Ursinia	13
Lentibulariaceae	Utricularia multifida	Pink Petticoats	13
Poaceae	Aira caryophyllea	Silvery Hairgrass	12
Boryaceae	Borya		12
Poaceae	Briza minor	Small Shivery Grass	12
Myrtaceae	Calothamnus planifolius var. planifolius		12
Cyperaceae	Chorizandra enodis	Black Bristlesedge	12
Proteaceae	Conospermum amoenum	Blue Smokebush	12
Proteaceae	Conospermum	Cone-seeds	12
Haemodoraceae	Conostylis		12
Asteraceae	Craspedia variabilis	Billy-buttons	12
Goodeniaceae	Dampiera eriocephala	Woolly-headed Dampiera	12
Fabaceae	Daviesia longifolia		12
Fabaceae	Dillwynia cinerascens	Grey Parrot-pea	12
Ericaceae	Ericaceae		12
Myrtaceae	Eucalyptus pluricaulis subsp. pluricaulis		12
Myrtaceae	Eucalyptus rufa	Flooded Gum	12
Fabaceae	Gastrolobium glabratum		12
Fabaceae	Gastrolobium hookeri		12
Lamiaceae	Hemiandra pungens	Snakebush	12
Fabaceae	Hovea chorizemifolia	Holly-leaved Hovea	12
Juncaceae	Juncus acutus subsp. acutus	Sharp Rush	12
	Magnoliopsida		12
Iridaceae	Patersonia juncea	Rush Leaved Patersonia	12
Proteaceae	Persoonia quinquenervis		12
Proteaceae	Petrophile seminuda		12
Proteaceae	Petrophile striata		12

Orchidaceae	Pterostylis crispula		12
Orchidaceae	Pterostylis nana	Dwarf Greenhood	12

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 08-Feb-2024

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	1
Listed Threatened Species:	29
Listed Migratory Species:	6

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	18

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands)		[Resource Information]
Ramsar Site Name Peel-yalgorup system	Proximity 50 - 100km upstream from Ramsar site	

Listed Threatened Ecological Communities	[Resource Information]
--	--------------------------

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Eucalypt Woodlands of the Western Australian Wheatbelt	Critically Endangered	Community likely to occur within area

Listed Threatened Species	[Resource Information]
---------------------------	--------------------------

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Number is the current name ID.

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

26	<i>Grevillea crowleyae</i>	P2	Sep	Shrub to 1 m. Flowers with reddish maroon to black styles.	Possible	Unlikely (U2)
27	<i>Leucopogon audax</i>	P2	Aug-Oct	Erect open shrub to 150 cm high x 120 cm wide. Leaves helically arranged. Corolla tube white, lobes white, partially pink - longer than tube. Lateritic uplands.	Possible	Unlikely (U2)
28	<i>Leucopogon darlingensis</i> subsp. <i>rectus</i>	P2	Aug - Sep	Slender shrub, to 1 m high. Fl. cream-yellow, Jan to Apr or Aug to Nov. Shallow loam, laterite. Ridges.	Likely	Unlikely (U2)
29	<i>Marianthus dryandra</i>	P2	Oct	Small shrub, erect to slightly straggling to 40 cm. Corolla white with purple stripes. Leaves yellowish green, toothed toward apex. Flowers mostly axillary, solitary on uppermost branchlets. Brown gravelly clayloam over laterite. Eucalypt woodland.	Possible	Unlikely (U2)
30	<i>Millotia tenuifolia</i> var. <i>laevis</i>	P2	Sep-Oct	Ascending to erect annual, herb, 0.02-0.1 m high. Fl. yellow. Granite or laterite soils.	Possible	Unlikely (U2)
31	<i>Persoonia hakeiformis</i>	P2	Oct-Dec, Jan	Erect, spreading to decumbent shrub, 0.3-1.8 m high. Fl. yellow. Gravelly clay loam or sand over laterite. Lateritic ridges.	Possible	Unlikely (U2)
32	<i>Stylium tylosum</i>	P2	Oct - Nov	Caespitose perennial, herb, 0.06-0.13 m high, Leaves narrowly oblanceolate to oblanceolate, 0.5-1 cm long, 0.8-2 mm wide, apex subacute, margin entire, glandular. Scape mostly glabrous, sparingly glandular on inflorescence axis. Inflorescence racemose. Fl. yellow. Sandy clay. Hillslopes, or adjacent to granite outcrops. Open woodland, shrubland.	Possible	Unlikely (U2)
33	<i>Synaphea boyaginensis</i>	P2	Sep-Oct	Shrub, to 0.25 m high. Fl. yellow. Gravelly clay-loam.	Possible	Unlikely (U2)
34	<i>Amanita validiuscula</i>	P2			Possible	Unlikely (U2)
35	<i>Acacia adjutrices</i>	P3	Aug	Multi-stemmed, normally erect sub-shrub 0.3–0.7 m tall. Fl. Globular, golden. Grows in loam or clay on laterite hills, in sandplain scrub, normally in association with Eucalyptus wandoo.	Possible	Unlikely (U2)
36	<i>Acacia deflexa</i>	P3	Aug to Sep	Prostrate to straggling or erect shrub, 0.15-2 m high. Fl. yellow. Yellow & gravelly lateritic sand, gravelly sandy loam. Plains.	Possible	Unlikely (U2)

37	<i>Acacia lanei</i>	P3	Jul to Sep	Spreading shrub, 1.5-2.3 m high. Fl. yellow. Clay, clay loam, gravelly loam. Along drainage lines & creeks.	Possible	Unlikely (U2)
38	<i>Amanita carneiphylla</i>	P3			Possible	Unlikely (U2)
39	<i>Anigozanthos bicolor</i> subsp. <i>extans</i>	P3	Aug-Oct	Rhizomatous, perennial, herb, 0.1-0.25 m high. Fl. green&red. White sand, sandy clay loam.	Possible	Unlikely (U2)
40	<i>Anthotium odontophyllum</i>	P3	Nov	Perennial, tufted clonal herb, 0.05-0.08 m high, leaves spatulate, 2-6 mm wide; flowering stalks 0.9-3 cm long, usually just shorter than leaves. Fl. white-cream, Nov to Dec. Sandy, clay or loamy soils over laterite. Eucalypt woodland over low heath.	Possible	Unlikely (U2)
41	<i>Banksia rufa</i> subsp. <i>obliquiloba</i>	P3	Sep to Oct	Ascending, lignotuberous shrub, to 1 m high. Fl. yellow. Gravelly loam.	Possible	Unlikely (U2)
42	<i>Conospermum scaposum</i>	P3	Oct to Dec or Jan to Feb	Erect shrub, 0.2-0.45(-0.75) m high. Fl. blue. White-grey sand, sandy clay. Low swampy areas, road verges.	Possible	Unlikely (U2)
43	<i>Dicrastylis reticulata</i>	P3	Sep-Oct	Woolly shrub, (0.15-)0.6-1.2(-1.5) m high. Fl. white. Sandy soils, often over granite. Amongst granite rock, hills, flats.	Possible	Unlikely (U2)
44	<i>Gastrolobium</i> sp. <i>Asperum</i> (F. Hort 2864)	P3	Sep	Erect spindly shrub, Opposite simple leaves 1.5- 3.5 cm, Fl. Yellow, red, orange.	Possible	Unlikely (U2)
45	<i>Goodenia katabudjar</i>	P3	Dec	Shrub (subshrub), 0.1-0.2 m high, stems hirsute; leaves entire, basal leaves absent; corolla hairy outside; sepals 5.5-7 mm long. Fl. blue-pink/white. Sandy gravel. Upland areas of open wandoo woodland.	Possible	Unlikely (U2)
46	<i>Hibbertia wandoo</i>	P3	Aug - Oct	Erect shrub 0.25-0.6 m high. Fl. yellow. Brown loam or sand with lateritic gravel, wandoo woodlands and jarrah-marri woodlands with open healthy understory.	Possible	Unlikely (U2)
47	<i>Stylium exappendiculatum</i>	P3	Aug to Oct/Nov	Bulb-forming perennial, herb, 0.03-0.065 m high. Fl. white/yellow, Aug to Oct or Dec. Stony, sandy or clayey soils, granite. Outcrops, winter-wet flats	Possible	Unlikely (U2)
48	<i>Synaphea pandurata</i>	P3	Sept-Oct	Clumped shrub (subshrub), 0.2-0.55 m high. Yellow-grey, yellow-brown, yellow-red sands and sandy loams, dark brown loam, laterite gravel, granite. In undulating areas.	Possible	Unlikely (U2)
49	<i>Synaphea platyphylla</i>	P3	Sep-Oct	Caespitose shrub. Fl. yellow, Sep to Oct. Sandy loam.	Possible	Unlikely (U2)

50	<i>Thysanotus cymosus</i>	P3	Sep to Oct	Caespitose perennial, herb (with fibrous roots with ellipsoidal tubers), to 0.3 m high. Fl. purple. Clay, granitic or lateritic sand.	Possible	Unlikely (U2)
51	<i>Thysanotus tenuis</i>	P3	Sep-Oct	Perennial, herb (with tuberous roots), to 0.2 m high. Fl. purple. Clay, sandy clay, sand.	Possible	Unlikely (U2)
52	<i>Tricostularia drummondii</i>	P3	Spring?	Perennial tufted herb, 0.4–1(–1.3) m high; plants clonal, forming dense tussocks 0.2–1.2 m across	Possible	Unlikely (U2)
53	<i>Verticordia huegelii</i> var. <i>tridens</i>	P3	Sep - Nov	Shrub, 0.15–0.6 m high. Fl. green-yellow/red. Sandy or gravelly loam. Winter-wet areas, low hills.	Possible	Unlikely (U2)
54	<i>Amanita preissii</i>	P3			Possible	Unlikely (U2)
55	<i>Bossiaea concinna</i>	P3	Jun to Sep	Erect, prickly shrub, 0.4-1.5 m high. Fl. yellow & red/brown. White or red sand, gravel.	Possible	Unlikely (U2)
56	<i>Acacia alata</i> var. <i>platyptera</i>	P4	Jun-Aug	Dense shrub, 0.5-1 m high. Fl. yellow. Clay, gravelly sandy clay. Lateritic ridges, clay flats.	Possible	Unlikely (U2)
57	<i>Banksia cynaroides</i>	P4	Aug or Dec or Jan to Feb	Erect, rigid, lignotuberous shrub, 0.9-1.5 m high. Fl. yellow, Aug or Dec or Jan to Feb. Gravelly sand or clay loam over laterite	Possible	Unlikely (U2)
58	<i>Caladenia x triangularis</i>	P4	Aug to Oct	Hybrid between C. flava and C.longicauda. Perennial, deciduous, herb with an underground tuber and a single hairy leaf, 50–100 mm (2–4 in) long and 5–10 mm (0.2–0.4 in) wide. Up to three pale yellow flowers 50–70 mm (2–3 in) wide are borne on a spike 100–250 mm (4–10 in) tall. Fl. pale yellow flecks of red.	Possible	Unlikely (U2)
59	<i>Darwinia sp. Dryandra</i> (G.J. Keighery 9295)	P4	May or Jul or Nov	Dense shrub, 0.1-0.45 m high. Fl. white. Gravelly clay. Lateritic ridges.	Possible	Unlikely (U2)
60	<i>Eucalyptus exilis</i>	P4	Aug-Oct	(Whipstick mallee), 2-6 m high, bark smooth. Fl. white. Grey sand, gravelly loam. Lateritic ridges.	Possible	Unlikely (U2)
61	<i>Eucalyptus loxophleba</i> x <i>wandoo</i>	P4	Sep to Oct, Dec - Feb	(Mallee) or tree, 4-20 m high, bark rough black-brown on trunk. Sandy clay or loam.	Possible	Unlikely (U2)
62	<i>Gastrolobium ovalifolium</i>	P4	Aug - Sep	Prostrate, spreading shrub, to 0.1 m high. Fl. orange & purple & yellow & red. Sandy clay. Gravelly hills.	Possible	Unlikely (U2)

63	<i>Gastrolobium stipulare</i>	P4	Sep	Erect, leafy shrub, to 0.5 m high. Fl. yellow&red&brown. Yellow-grey sand, gravelly clay loam, laterite. Slopes, ridges.	Possible	Unlikely (U2)
64	<i>Lasiopetalum bracteatum</i>	P4	Aug-Nov	Erect, open shrub, 0.4-1.5 m high. Fl. pink-purple. Sandy clay, clay, lateritic gravel. Along drainage lines, creeks, gullies, granite outcrops.	Possible	Unlikely (U2)
65	<i>Lasiopetalum cardiophyllum</i>	P4	Aug-Jan	Erect, multi-stemmed shrub, 0.2-0.5 m high. Fl. pink. Lateritic gravelly soils, sandy clay. Flats, hillslopes.	Possible	Unlikely (U2)
66	<i>Stylidium tenuicarpum</i>	P4	Sep to Nov	Rosetted perennial, herb, 0.1-0.5 m high, Leaves broadly linear to narrowly oblanceolate, 1-7 cm long, 1-2.5 mm wide, apex mucronate, margin hyaline, glabrous. Scape hoary. Inflorescence racemose. Fl. yellow/orange. Sandy loam over laterite or granite. Rock outcrops, hillslopes, breakaways. Shrubland, open woodland.	Possible	Unlikely (U2)
67	<i>Xanthorrhoea brevistyla</i>	P4	Oct-Dec	Perennial tree-like monocot, to 3.5 m high, usually no trunk, scape length 0.8-1.25 m, spike length 0.24-0.96 m. Fl. white. Sand, clay, laterite.	Possible	Unlikely (U2)
68	<i>Gastrolobium tomentosum</i>	P4	Aug-Nov	Weak, decumbent, often clumped shrub, to 1 m high. Fl. orange, purple, red. Gravelly loam or clay, sometimes over sandier substrates. Hills, roadverges.	Possible	Unlikely (U2)
69	<i>Acacia cochlocarpa</i> subsp. <i>cochlocarpa</i>	T (EN)	Jun-Aug	Velutinous, sprawling shrub, 0.3-0.7(-1.5) m high. Fl. yellow. Sandy clay or laterite.	Possible	Unlikely (U2)
70	<i>Acacia insolita</i> subsp. <i>recurva</i>	T (EN)	Sep	Spindly shrub, 0.6-1.2 m high. Fl. yellow-cream. Lateritic ridges.	Possible	Unlikely (U2)
71	<i>Banksia cuneata</i>	T (EN)	Sep-Dec	Non-lignotuberous, small tree or shrub, 2-4 m high. Fl. pink/pink & cream & yellow. Grey, yellow or yellow-brown sand.	Possible	Unlikely (U2)
72	<i>Boronia capitata</i> subsp. <i>capitata</i>	T (EN)	Aug to Dec or Feb	Slender shrub, 0.3-1.3 m high. Fl. pink. Sand, often over laterite. Sandplains.	Possible	Unlikely (U2)
73	<i>Caladenia hoffmannii</i>	T (EN)	Aug-Oct	Tuberous, perennial, herb, 0.13-0.3 m high. Fl. green & yellow & red. Clay, loam, laterite, granite. Rocky outcrops and hillsides, ridges, swamps and gullies.	Possible	Unlikely (U2)

#	SPECIES	WA STATUS	FLOWERING	DESCRIPTION AND HABITAT	PRE-SURVEY ASSESSMENT	POST SURVEY ASSESSMENT
74	<i>Darwinia carnea</i>	T (EN)	Oct to Dec	Spreading shrub, 0.2-0.45 m high. Fl. green & red. Lateritic loam & gravel.	Possible	Unlikely (U2)
75	<i>Lasiopetalum rotundifolium</i>	T (EN)	Sep-Oct	Erect shrub, to 0.4 m high. Fl. pink. Gravelly clayey sand. Hill.	Possible	Unlikely (U2)
76	<i>Verticordia fimbriilepis</i> subsp. <i>fimbriilepis</i>	T (EN)	Oct-Dec, Jan	Shrub, 0.3-0.7 m high. Fl. pink-white. Gravelly sandy or clayey soils. Flats, road verges.	Possible	Unlikely (U2)
77	<i>Pultenaea pauciflora</i> (Narrogin Pea)	T (VU)	Oct - Nov	Dense, much-branched shrub, to 0.8 m high. Fl. yellow. Sandy & clay lateritic soils. Undulating country.	Possible	Unlikely (U2)
78	<i>Thomasia montana</i>	T (VU)	Sep-Oct	Upright shrub, 0.5-1 m high. Fl. blue-purple-red, Sep to Oct. Loamy soils. Rocky granite knolls, lateritic hills.	Possible	Unlikely (U2)
