Table of Contents

1 Introduction

Talis Consultants Pty Ltd (Talis) has been commissioned by Shire of Serpentine Jarrahdale (the Shire) to design and document Indigo Parkway extension, linking the existing Indigo Parkway at Briggs Road to Larsen Road at Sansimeon Boulevard.

The scope of Talis' services, as outlined in this Design Report, is to prepare design documentation for the construction of Indigo Parkway. The extent of the design includes:

- Road reserve width to be 27.5m and 22.5m adjacent to the northern Multiple Use Corridor – Public Open Space (MUC);
- Earthworks for the full road reserve width, and any adjacent tie in/blending;
- The verge width being 5.75m to accommodate parking;
- 2.5m parking bays are to be indented into the verge;
- 5m wide lanes, consisting of 3.5m wide traffic lane and 1.5m wide on street cycle lane;
- 2.5m wide dual use path on the north side and a 1.5m footpath on the south side;
- Minor 20% and Major 1% drainage design including centre median island to be designed as a 6m wide inverted swale;
- Continuation of a median island East/West across Briggs Road, creating a left in-left out intersection at Briggs Road and Indigo Parkway;
- Roundabout intersection at Carraway Avenue and Indigo Parkway;
- Roundabout intersection at Larsen Road and Indigo Parkway;
- Left in/Left out at Portwine Avenue;
- Associated drainage design, including Water Sensitive Urban Design;
- Utility removal/relocation and insertion; and
- LED Western Power standard Street lighting.

This Design Report outlines the design assumptions, standards used and any deviations from the standards in preparing the designs.

This Design Report should be read in conjunction with the Design Drawings.

2 Background

2.1 Survey and Topography

Talis commissioned Jurovich Surveying to undertake feature survey in July 2024, which is shown in Appendix A.

2.2 Geotechnical Information

A geotechnical site investigation was undertaken by ASLAB Pty Ltd in August 2024 to support the construction of Indigo Parkway. Geotechnical investigation test site locations are shown in Figure 2-1.

Figure 2-1: Test Pits Locations

Laboratory testing was undertaken on 4x field samples for CBR, particle size distribution, Atterberg, and moisture content characteristics. CBR values of the in-situ material ranged between 19% and 35%. For design purposes, a value of 12% CBR has been adopted. A copy of laboratory test results is shown in Appendix D.

Due to moderate linear shrinkage characteristics of tested soil samples, clearance cover with clean fill sand with a minimum depth of 300mm to in situ material has been incorporated in 3d design of the road.

2.3 Site Inspection

A site inspection was undertaken by Talis on 26 March 2024. The site inspection was used to determine any constraints and opportunities within the design. Information gathered from the site inspection has been used to amend the design and incorporated within the design drawings.

3 Design Standards

3.1 Software

The design of Indigo Parkway from Briggs Road to Larsen Road has been undertaken using AutoDesk Civil 3D 2024.

3.2 Civil Design Standards

The road has been designed in accordance with the following standards and guidelines:

- Australian Standard 1428: Design for access and mobility
- Australian Standard 1742: Manual of uniform traffic control devices
- Austroads Guide to Road Design Part 3: Geometric Design
- Austroads Guide to Road Design Part 4B: Roundabouts
- Austroads Guide to Road Design Part 6A: Pedestrian and Cyclist Paths

Table 3-1: Civil Design Standards

Parameter	Value	Reference
Traffic Lane width	3.5 meters	AGRD Part 3 Cl.4.2.4
Cycle Lane width	1.5 metres	AGRD Part 6A T5.2
Footpath Width	1.5 meters	AGRD Part 6A T5.1
Dual Usage Path Width	2.5 meters	AGRD Part 6A T5.3
Vertical grade	3% maximum (desirable)	AS 1428.1 Cl. 7.2
Traffic Lane Crossfall	3% maximum	AGRD Part 3 Cl.4.2.2
Footpath/DUP Crossfall	2.5% maximum	AS 1428.1:2021 Cl. 7.1
Design speed	60 km/h	AGRD Part 3 Cl.3
Cycle Lane Horizontal radius	9 metres minimum	AGRD Part 6A T5.7
Design Vehicle	8.5m Service Vehicle	Project requirement
Check Vehicle	12m Semi-trailer	Project requirement

3.1 Alignments

The new section of Indigo Parkway will extend from the east of the existing Indigo Parkway and Briggs Road to the north of Larsen Road and Sansimeon Boulevard. The proposed alignment is shown in Appendix E.

3.2 Tie-in

The new pavement will tie-in to the existing pavement at:

- Sansimeon Boulevard;
- Larsen Road;
- Portwine Avenue;
- Caraway Avenue; and
- Briggs Road.

3.3 Intersections

A single-lane roundabout was designed for the Larsen Road and Caraway Avenue intersection with central islands and pram ramps on the either side of the roundabout.

Several options were considered for the intersection of Indigo Parkway with Larsen Road, including both staggered t-intersections, and a 4-way roundabout. In consultation with the Shire, the roundabout option was agreed to be progressed due to improved traffic flows in comparison to the staggered t-intersection option. It is noted that due to the asymmetrical approach legs; the roundabout geometry shown in the detailed drawings does not accommodate the manoeuvring of vehicles longer than 12 meters making left turn movements from Larsen Road onto Indigo Parkway Westbound. As such, it is recommended that vehicles over 12 meters be prohibited from making left turns at this intersection.

Due to site constraints at the Caraway Ave/ Indigo Parkway intersection, various design iterations and layout options were explored between the 15% and 85% design stages. While a T-intersection would provide required geometry for turning movements of design vehicles within the currently allocated road reserve, due to funding commitments and anticipated traffic volumes accessing Carraway Ave from the intersection, a roundabout is understood to be required. Due to minimum radius required to accommodate swept paths of design vehicles, the alignment is required to deviate beyond the currently designated road reserve at this location and encroach into the Reserve (Type 3 R) Lot on the south side of the alignment.

3.4 Parking Bays

During 85% stage, 53 parallel car park bays were proposed to be included with a width 2.5 meters, to service the proposed multi-use corridor and future development to the South of Indigo Parkway.

Following Shire 85% design review comments, the number of bays has been reduced to enable the road and footpath carriageway to fit within proposed 22.5m road reserve adjacent to the Multiple Use Corridor.

3.5 Cycle lane

A 1.5 meter wide cycle lane is included either side of the road connecting from Larsen Road to Briggs Road.

3.6 Footpath

A 1.5 meter wide concrete footpath is includedalong south side of the road connecting existing footpath on Larsen Road and Sansimeon Boulevard to existing footpath on Briggs Road.

3.7 Dual Use Path

A 2.5 meter wide concrete dual use path was designed on the North side of the road connecting existing footpath on Larsen Road and Sansimeon Boulevard to existing footpath on Briggs road. The design has considered that experienced road cyclists will be using the on-road bicycle lane, and as such the dual use path has adopted a minimum design speed.

3.8 Stormwater Drainage

The stormwater strategy involves directing road runoff, with a 3% crossfall and kerb break structures drainage surface water into the 6-meter median drain.

A new box culvert, designed between chainage 0.86 and 0.88, will allow stormwater from the creek to flow into the existing open drain to the north of the road.

Hydraulic information has been adopted from the 360 Environmental Local Water Management Strategy report for sizing of culvert, swale reshaping, and design basin sizing. The existing culvert immediately downstream of the proposed Indigo Parkway Multi use corridor has also been taken into consideration.

Hydraulic and storage requirements for this basin have been guided from requirements outlined in the Local Water Management Strategy Plan (LWMS) previously undertaken by 360 Environmental, provided by the Shire. The geometry detailed in the LWMS study and included in concept design assumed a rectangular plan view of the basin, with a base area of 800m^2 and depth of 1.2m, and , side slopes of 1:6 H:V. Following detailed earthworks modelling, a rectangular plan view shape with the dimensions is not able to be accommodated considering the tie-in level constraints and available MUC area. A detention basin with capacity of 3300m^3 has been detailed in the design drawings with geometry designed to suit required road levels and geometry and outlet level constraints discharging to Oakland Creek. A 450mm RCP outlet at the base of the detention basin draining into the has been included as outlined in the Local Water Management Strategy Plan previously undertaken by 360 Environmental.

3.9 Kerbing and Ramps

Kerbing was designed to achieve drainage requirements of the road, with Shire Standard details being utilised. The kerbing design includes reinforced flush kerbs, semi-mountable kerbs and mountable kerbs, which are selected based on the road's traffic load and the drainage requirements. This ensures that water is efficiently guided into stormwater systems, minimising the risk of flooding and road damage.

Design includes the installation of 22 pram ramps to improve accessibility across the Indigo Parkway extension, with integrated TGSI elements to ensure safe navigation for visually impaired pedestrians.

Several existing kerb ramps have been identified as being non-compliant and have been included for reconstruction as part of this project.

3.10 Tree Removal

Talis commissioned Westworks Consultancy to undertake a tree survey. Westworks conducted the survey between Indigo Parkway and Sansimeon Boulevard, Byford, on 29 January 2025. The purpose of the inspection was to assess all trees within the area proposed for the Indigo Parkway extension.

A total of 70 trees were assessed during the survey, with the following breakdown:

- 25 trees identified as native species in accordance with the Environmental Protection Act 1986 (EPA Act).
- 45 trees classified as introduced species.
- 50 trees were found to be in fair health, which is considered normal for their species.
- 5 trees exhibit poor or very poor structural conditions.
- 13 trees are recommended for removal due to being dead or exhibiting poor to very poor health and/or structure. These trees have a reduced Useful Life Expectancy (ULE), making them unsuitable for preservation.
- No trees were observed to contain hollows or show signs of foraging activity within their canopies.
- 49 trees have a Future Habitat Value.
- 8 trees are classified as providing Roosting Value.
- 12 trees have No Habitat Value, due to their poor health, structural condition, or being unsuitable species for habitat purposes.
- A single tree was noted to contain a bird nest, assigning it a Low habitat value.

A copy of to Tree Survey report is provided in Appendix F.

Based on detailed design drawings, trees shown in the hatched areas in Figure 3-1 will require removal to construct the proposed Indigo Parkway extension.

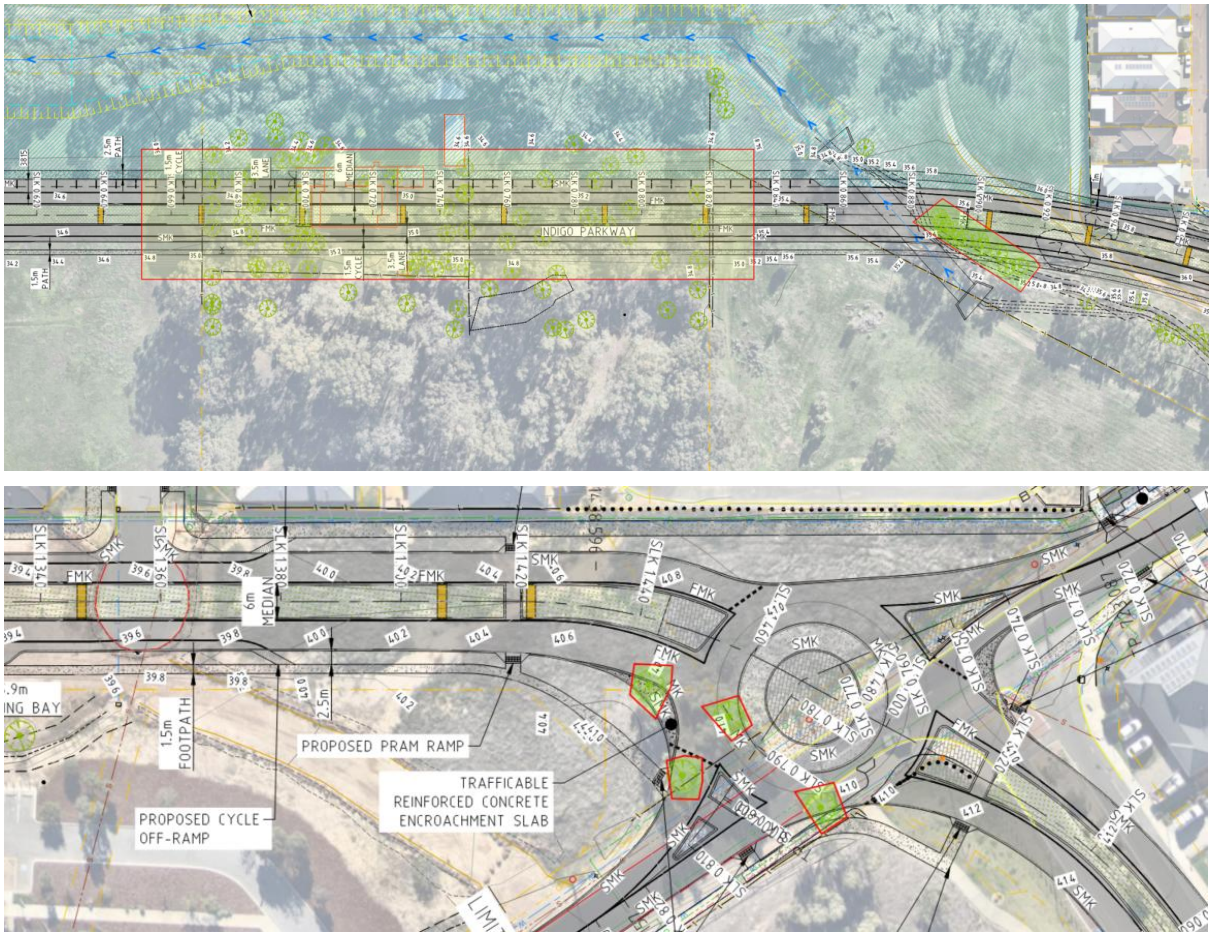

Figure 3-1: Required Tree Clearing

3.11 Existing Services

Talis commissioned Raidar Innovation to undertake service locating existing services within the proposed road reserve in July 2024. Existing services survey plans are shown in Appendix C.

3.12 Property Boundaries/Land Acquisition

The proposed road alignment will encroach into private property with existing property boundaries as detailed on Landgate database, shown on the Drawings in Appendix E. It is understood that the Shire has since acquired these properties and have lodged applications for Cadastral Boundary realignments to accommodate the required road reserve alignment.

To accommodate the roundabout intersection at Carraway Ave, the kerb line on the northern leg (Caraway Ave) is required to be realigned into the existing verge area adjacent to Properties #40 and #41. While the proposed design at this location is within the existing road reserve, the kerb realignments require demolition of existing landscaping and fencing adjacent within the road reserve at the front of Properties #40 and #41 Carraway Ave.

Preliminary areas of proposed land acquisition are shown in Appendix B.

3.13 List of Drawings

A list of drawings provided in the 100% design package is shown in Table 3-2

Table 3-2: Drawing Sheet List

4 Road Safety Audit

A copy of the Road Safety Audit undertaken on the 85% design package is provided as an attachment.

A summary of findings, recommendations and design responses is provided in Table 4-1.

Table 4-1: Road Safety Audit Findings and Response Summary

Finding No.	Description	Recommendation	Talis Comment
2.1	Restricted sightline for pedestrians crossing Indigo Parkway due to the wall	"Sufficient sight distance should be provided for pedestrians to cross the road in accordance with Austroads guidelines. Additional mitigation measures could include an Advance Pedestrian crossing signage (W6-1) placed on approach."	Vehicles approaching Indigo Parkway intersection from Briggs Street are required to stop. Additional Advance warning signs has been included.
2.2	"There is a risk of road users not being aware of the change to the intersection and suddenly stopping or overshooting the intersection resulting in a rear end or right angle crash"	"A One Way (R2-2) sign should be installed on the median opposite the side road approach. An advance T junction signage should be installed on the approach to the intersection."	Additional warning signs included as per recommendations
2.3	“Approach to RAB's not aligned with central annulus.”	"The pavement line marking should align with the central annulus of the roundabout as detailed in the Austroads Guidelines"	Line marking amended to provide improved alignment with central annulus.

Finding No.	Description	Recommendation	Talis Comment
2.4	“There are side streets that road users could shortcut across the verge to access Indigo Parkway.”	"The side roads should have a suitable treatment to ensure that vehicles do not shortcut across the verge into Indigo Pathway.”	Bollards included adjacent to Sandalwood Road. Due to existing underground services adjacent to Primrose Loop, it is suggested that this section be monitored and if road users shortcutting through is an issue, that an rock boulders (or similar treatment with minimal subsurface depth) be placed to block unsafe thoroughfare.
2.5	“Location of the existing bus stop on Larsen Road.”	“A review should be undertaken to establish if the existing bus stop should be relocated further from the proposed roundabout.”	Bus stop to be relocated further East along Larsen Road.
2.6	“The plans do not show connections to the existing paths”	“The path connections to existing paths should be detailed on the drawings”	Relevant footpaths on drawings have been extended to connect to existing. Additional kerb ramp reconstructions included.
2.7	“The drawings show a gap in the kerbing where the large culvert is to be installed.”	“The placement of guide posts at the start and end of the kerb as well as median edge line marking should be detailed on the drawings.”	Edge line and signage included on signs and lines drawings.
2.8	“The drawings do not show all vehicle swept paths at intersections.”	“The turning swept paths of large vehicles should be detailed for all intersections along Indigo Pathway.”	Swept paths included in drawing set. Design vehicle parameters for each intersection outlined in design report.

Finding No.	Description	Recommendation	Talis Comment
2.9	"Non-Frangible objects near the traffic lane."	"Determine the Network Roadside Risk Intervention Threshold for the road. If the action is to treat only the isolated hazards, then those that present a higher risk should be treated first. These will be the isolated hazards that are closer to the road. Alternatively, use the Austroads: Guide to Road Design Part 6 - Roadside Design Safety and Barriers (2010) Table 4.1: Clear zone distances from the edge of through travelled way and provide a suitable clear zone or shield hazards with road barriers."	Swept paths included in drawing set. Design vehicle parameters for each intersection outlined in design report.
2.10	"The drawings show a crossfall of -3% which is steep for a roundabout with high bus usage"	"The high adverse crossfall may be a discomfort to bus patrons."	Crossfall considered however retained for drainage requirements.
2.11	"Tactile Ground Surface Indicators"	"The Tactile Ground Surface Indicators should be installed to AS 1428.4. The path crossing alignment at various locations should be compliant with recommendations for universal access. A landing behind the ramp should be provided."	Additional TGSI's included in accordance with AS 1428.4. Level Landings minimum 1500mm wide included in drawings.
2.12	"The start of kerbing should be delineated with a guide post to assist the road user past the end of the kerb."	"The start of kerbing should be delineated with a guide post to assist the road user past the end of the kerb"	Guide post to be installed at kerb termination.

Finding No.	Description	Recommendation	Talis Comment
2.13	“Service Pit Covers in Traffic Lane.”	“Service lids should not be installed in the traffic lane, when not possible, they should have a textured cover or skid resistant coating.”	“Service lids relocated where posible. Concrete infill Class D lids to be installed where pits are required to be located within traffic lane.”
2.14	“Missing signage”	“A One Way (R2-2) sign should be installed on the median opposite the side road.”	Additional signage included
2.15	“There are sections of car parking adjacent to the cycle lane along Indigo Parkway”	“Where parking has been placed adjacent to a cycle lane which has a high turnover of parked vehicles a bicycle safety strip should be installed.”	Bicycle safety strip previously explored and deemed impractical within road reserve constraints.

5 Conclusion

The proposed road alignment commences from the East of the existing Indigo Parkway and Briggs Road to the north of Larsen Road and Sansimeon Boulevard.

The follow comments are provided:

- 100% Lighting design reflecting kerb alignments revisions is currently being finalised at time of issuing this report.
- The Shire should continue its consultations with the two property owners at Properties #40 and #41 Carraway Ave, and #1 Sansimseon Boulevard.

NOTES:
* THIS NOTE IS AN INTEGRAL PART OF THIS PLAN OR THE DATA AS TRANSMITTED. OMISSION OF THIS NOTE WHEN TRANSMITTING THIS PLAN OR ACCOMPANYING DATA OR ANY PART THEREOF TO ANY THIRD PARTY WILL RENDER THIS PLAN OR DATA INVALID.

DIGITAL DRAWING:
* SEE INDEX SHEET FOR NOTES, CONTROL LISTING AND FEATURE LEGEND
* DATA EXISTS ON LAYERS THAT HAVE BEEN DIGITALLY SWITCHED OFF. THE DATA IS NOT SHOWN ON THIS PAPER PLAN FOR CLARITY.
* DATA EXISTS IN THE MODEL SPACE OF THIS PLAN OUTSIDE THE EXTENTS OF PLOTTED SHEETS.
* DATA SUPPLIED IS CORRECT AT THE TIME OF SURVEY. ALTERATIONS TO SITE ARE POSSIBLE AFTER THIS DATE. REFER TO REVISION DATES.
* THIS PLAN HAS BEEN PREPARED FOR THE CLIENT AND SHOULD NOT BE USED FOR ANY OTHER PURPOSE UNLESS AUTHORISED BY CROSSLAND & HARDY PTY LTD.

UNDERGROUND UTILITIES:
* WHERE DEPTH IS ANNOTATED WITH "D?", NO DEPTH HAS BEEN SUPPLIED BY LOCATOR.
* UNDERGROUND UTILITY DETECTION UNDERTAKEN BY TRIODIA SCANNING SERVICES PTY LTD.
* UNDERGROUND UTILITIES DETECTED USING ELECTRONIC METHODS. THE DATA SHOWN REPRESENTS SPATIAL ACCURACY TO QUALITY LEVEL B STANDARD AS DEFINED IN AS5488.1-2022, HOWEVER THE ACCURACY OF ELECTRONIC DETECTION MAY VARY WITH SITE CONDITIONS (SOIL TYPE, UTILITY TYPE, UTILITY DEPTH ETC). POSITIONAL UNCERTAINTY CAN BE GREATER THAN +/- 500mm.
* UNDERGROUND UTILITIES HAVE BEEN SURVEYED AT GROUND LEVEL WHERE ELECTRONICALLY DETECTED. THE UTILITY LEVEL IS CALCULATED FROM SUBTRACTING THE DETECTED DEPTH FROM THE SURVEYED GROUND LEVEL. WHERE DEPTH INFORMATION FOR A SURVEYED POINT WAS NOT AVAILABLE THE DEPTH HAS BEEN INTERPOLATED BETWEEN ADJACENT POINTS WITH KNOWN DEPTHS.
* WHERE AN UNDERGROUND UTILITY TOP OF PIPE HAS BEEN DIRECTLY MEASURED (POT HOLE OR EXPOSED), THEN THE SPATIAL ACCURACY OF THE SURVEYED POINT IS IN ACCORDANCE WITH QUALITY LEVEL A AS DEFINED IN AS5488.1-2022. QUALITY LEVEL A POINTS ARE SHOWN WITH A POINT SYMBOL, SEE LEGEND OF FEATURES.
* UNDERGROUND UTILITY ALIGNMENTS ARE REPRESENTED WITH STRAIGHT LINES JOINING SURVEYED POINTS. THE TRUE SERVICE ALIGNMENT MAY VARY BETWEEN SURVEYED POINTS.
* NO RESPONSIBILITY CAN BE ACCEPTED BY CROSSLAND & HARDY PTY LTD FOR ANY DAMAGE CAUSED TO ANY UNDERGROUND SERVICE OR ANY LOSS OR INJURY SO SUFFERED IF ENQUIRY AND VERIFICATION HAVE NOT BEEN COMPLETED IN ACCORDANCE WITH THIS NOTE.

TOPOGRAPHIC:
* TOPOGRAPHIC SURVEY UNDERTAKEN USING RTK GPS (ACCURACY +/-30mm, WHERE LEVELS ARE SHOWN).

AERIAL IMAGE:
* AERIAL IMAGE (NEARMAP JUNE 2024). POSITION AND SCALE IS APPROXIMATE. COPYRIGHT NEARMAP.

Scale: AS SHOWN @ A1 | Date: 31.07.2024
Drawn: VS | Checked: AB | Approved: JM
Job No: TC24021 | Drg. No: C-102 | Rev: G
Filename: TC24021.DWG

GENERAL NOTES:

1. SURVEY HAS BEEN PROVIDED BY JUROVICH SURVEYORS
2. LOCATION OF UNDERGROUND SERVICES IS TAKEN FROM GPR SCANNING, BEFORE YOU DIG AUSTRALIA (BYDA) AND ESINET. NO UNDERGROUND PROOFING HAS BEEN UNDERTAKEN AND AS SUCH THEIR ACCURACY CANNOT BE GUARANTEED. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ESTABLISH THE LOCATION AND LEVEL OF ALL EXISTING SERVICES PRIOR TO THE COMMENCEMENT OF ANY WORK. ANY DISCREPANCIES SHALL BE REPORTED TO THE PRINCIPAL'S SUPERINTENDENT.
3. THE CONTRACTOR SHALL ARRANGE ALL SURVEY SETOUT TO BE CARRIED OUT BY A REGISTERED SURVEYOR. LEVELS ARE TO AUSTRALIAN HEIGHT DATUM (AHD).
4. THE SITE IS TO BE LEFT CLEAN AND FREE OF RUBBISH/DEBRIS UPON COMPLETION OF THE WORKS.
5. THE DRAWINGS AND SPECIFICATIONS ARE DETAILED TO SHOW SUFFICIENT INFORMATION FOR THE CONTRACTOR TO COMPLETE THE WORKS. ANY ADDITIONAL DESIGN AND DETAILING WHICH THE CONTRACTOR FEELS IS NECESSARY SHALL BE COMPLETED BY THE CONTRACTOR.
6. THE CONTRACTOR SHALL UNDERTAKE A DILAPIDATION SURVEY PRIOR TO THE COMMENCEMENT OF WORKS.
7. READ DRAWINGS IN CONJUNCTION WITH ALL OTHER CONSULTANTS DRAWINGS AND SPECIFICATIONS AND ANY OTHER WRITTEN INSTRUCTION AS MAY BE ISSUED DURING THE COURSE OF THE WORKS.
8. REPORT ANY DISCREPANCIES TO THE SUPERINTENDENT AND OBTAIN A DECISION BEFORE PROCEEDING WITH THE WORK.
9. VERIFY ALL DIMENSIONS AND SETTING OUT BEFORE CONSTRUCTION AND FABRICATION IS COMMENCED.
10. DIMENSIONS ARE NOT TO BE INFERRED BY SCALING FROM THESE DRAWINGS.
11. COMPLY WITH ALL RELEVANT AUSTRALIAN STANDARDS AND STATUTORY REQUIREMENTS.
12. ALL DIMENSIONS ARE IN MILLIMETRES (mm) UNLESS NOTED OTHERWISE.
13. ALL SHOP DRAWINGS SHALL BE PREPARED BY THE CONTRACTOR, CHECKED BY THE CONTRACTOR AND ENDORSED BY THE CONTRACTOR AS HAVING BEEN CHECKED FOR COMPLETENESS AND ACCURACY PRIOR TO SUBMITTING FOR REVIEW. ACCEPTANCE OF THE SHOP DRAWINGS DOES NOT RELIEVE THE CONTRACTOR FROM COMPLIANCE WITH THE PROJECT DOCUMENTATION.

EARTHWORKS

1. WHERE SURPLUS MATERIAL CANNOT BE REUSED ON SITE, IT SHALL BE REMOVED OFF SITE AT THE CONTRACTOR'S EXPENSE.
2. THE SUBGRADE SHALL BE COMPACTED TO ACHIEVE A DRY DENSITY RATIO OF 95% OF MAXIMUM MODIFIED DRY DENSITY (MMDD) WHEN TESTED IN ACCORDANCE WITH MRWA TEST METHOD WA 134.1.

EARTHWORKS

REFER STANDARD SSJ DRAWINGS AND DETAILS:

DRAWING NO.	TITLE
STD-R01	EXTRUDED KERBING AND PAVEMENT DETAILS
STD-R07	FOOTPATH DETAILS
STD-R05	JOINT DETAILS
STD-R04	PEDESTRIAN RAMP
SD.03	STANDARD BIO RETENTION POCKETS
STD-D04	STANDARD COMBINATION GRATED SIDE ENTRY PIT
STD-D08	STANDARD DRAINAGE SUMP DETAILS
STD-D09	STANDARD DRAINAGE SUMP FENCING
STD-D07	STANDARD PIPE BEDDING AND STEP IRON DETAILS
STD-D05	STANDARD SIDE ENTRY PIT WITH SOAKWELL LINER
STD-D10	STANDARD SUBSOIL DRAINAGE
STD-D03	STANDARD TYPICAL GRATED GULLY PIT
STD-D02	STANDARD TYPICAL JUNCTION PIT
STD-D01	STANDARD TYPICAL SIDE ENTRY PIT
STD-R09	TYPICAL CARBAYS AND LANEWAYS LINEMARKING
STD-R02	TYPICAL CROSS SECTION KERBED ROAD

PAVEMENT & SURFACING

1. THE SUBGRADE SHALL BE DRIED BACK TO 85% OF OMC PRIOR TO THE CONSTRUCTION OF THE BASECOURSE LAYER.
2. THE BASECOURSE SHALL BE CONSTRUCTED IN A SINGLE LAYER TO ACHIEVE A DRY DENSITY RATIO OF 98% OF MAXIMUM MODIFIED DRY DENSITY (MMDD) WHEN TESTED IN ACCORDANCE WITH MRWA TEST METHOD WA 134.1.
3. THE BASECOURSE SHALL BE DRIED BACK TO 85% OF OMC PRIOR TO LAYING THE PRIME COAT.
4. THE SUB BASE SHALL BE CONSTRUCTED IN A SINGLE LAYER TO ACHIEVE A DRY DENSITY RATIO OF 95% OF MAXIMUM DRY DENSITY(MMDD) WHEN TESTED IN ACCORDANCE WITH MRWA TEST METHOD WA 134.1

CONCRETE

1. ALL CONCRETE AND CONCRETE WORKMANSHIP SHALL BE IN ACCORDANCE WITH AS 3600 AND THE REFERENCED CODES/STANDARDS.
2. USE ONLY ORDINARY PORTLAND CEMENT TYPE GP UNLESS NOTED OTHERWISE.
3. COMPACT PLASTIC CONCRETE USING SUITABLE IMMERSION VIBRATORS OR AS OTHERWISE SPECIFIED TO ACHIEVE A DENSE AND UNIFORM MASS FREE FROM VOIDS, SEGREGATION & HONEYCOMBING WITH A UNIFORM FACE WHEN THE FORMS ARE REMOVED.
4. SIZE OF CONCRETE ELEMENTS DOES NOT INCLUDE THICKNESS OF APPLIED FINISHES.
5. PROPERLY FORM ALL CONSTRUCTION JOINTS AND USE ONLY WHERE SHOWN ON DRAWINGS OR AS OTHERWISE APPROVED BY THE SUPERINTENDENT.
6. COMMENCE CURING IMMEDIATELY AFTER CONCRETE HAS ACHIEVED SET AND CONTINUE FOR 7 DAYS BY KEEPING SURFACE(S) CONTINUOUSLY MOIST OR BY APPLICATION OF SPRAYED CURING COMPOUND IN ACCORDANCE WITH AS 3799.
7. ALL GROUND SLABS SHALL BE LAID ON A VAPOUR BARRIER COMPRISING 0.2mm POLYETHYLENE FILM IN ACCORDANCE WITH AS 2877. SHEETS SHALL BE LAPPED 200mm AND TAPED AT ALL JOINTS.

SIGNS AND PAVEMENT MARKINGS

1. ALL LINE MARKING SHALL BE WHITE UNLESS NOTED OTHERWISE.
2. ALL LINE MARKING SHALL BE SLIP RESISTANT PAINT UNLESS NOTED OTHERWISE.
3. ALL LINE MARKING SHALL BE INSTALLED IN ACCORDANCE WITH AS 1742.2.
4. LINE MARKING AND SIGNS FOR ACROD PARKING BAYS SHALL BE INSTALLED IN ACCORDANCE WITH AS/NZS 2890.6.

Table of Contents

1.0 Introduction

An inspection (Tree survey) was undertaken on 70 trees located between Indigo Parkway and Sansimeon Boulevard, Byford on the 29 January 2025. The purpose of the inspection is to inspect all trees within the area proposed for the Indigo Parkway extension.

A Tree Survey is a ground level assessment of trees meeting criteria of inclusion set in consultation with the client and where applicable, the policies and regulations set out by the Environmental Protection Agency in line with Part 5, Division 2, of the Environmental Protection Act 1986, Environmental regulation – Clearing of native vegetation.

The survey requires collection of data on individual trees including the accurate species ID, location with GPS coordinates, a rating of the health and structural condition, tree size (height, canopy spread, DBH and DGL), the age and useful life expectancy. Additionally, the classification of individuals origin and habitat value as defined by the EPA.

This report discusses the impacts that the proposed Indigo Parkway extension will have on the subject trees.

2.0 Methodology

This tree assessment consisted of a ground based basic tree assessment utilising the principals of Visual Tree Assessment (VTA) as outlined by Mattheck and Breloer (1994) and Lonsdale's approach (1999).

Following positive identification, the trees were assessed against the following areas: height (in meters), canopy spread, diameter of the trunk, health, structure, age and inspected from ground level for any evidence of defect and pest and diseases, using the following tools.

- Acoustic hammer.
- Clinometer.
- Forestry Workers Measuring Tape.
- Probing tools

2.1 Species Identification.

This consultant and associates have a combined over 20 years' experience working with Western Australian tree species, with key proficiency identifying those which are endemic and native to the local Perth regions. Additionally, there are resources to the disposal of Westworks Consultancy to assist in tree species identification including, but not limited to, peer reviewed books and journals, outsourced associates with particular expertise and access to the Western Australian Herbarium (Department of Biodiversity, Conservation and Attractions).

2.2 Tree Measurements

- The height of the tree is an approximate height taken in meters (m)
- The canopy spread gives an indication of the general spread of the canopy in meters.
- The diameter of the trunk (DBH) is measures at 1.4m above ground level.
- The diameter of the trunk at ground level (DGL).

2.3 Tree Health

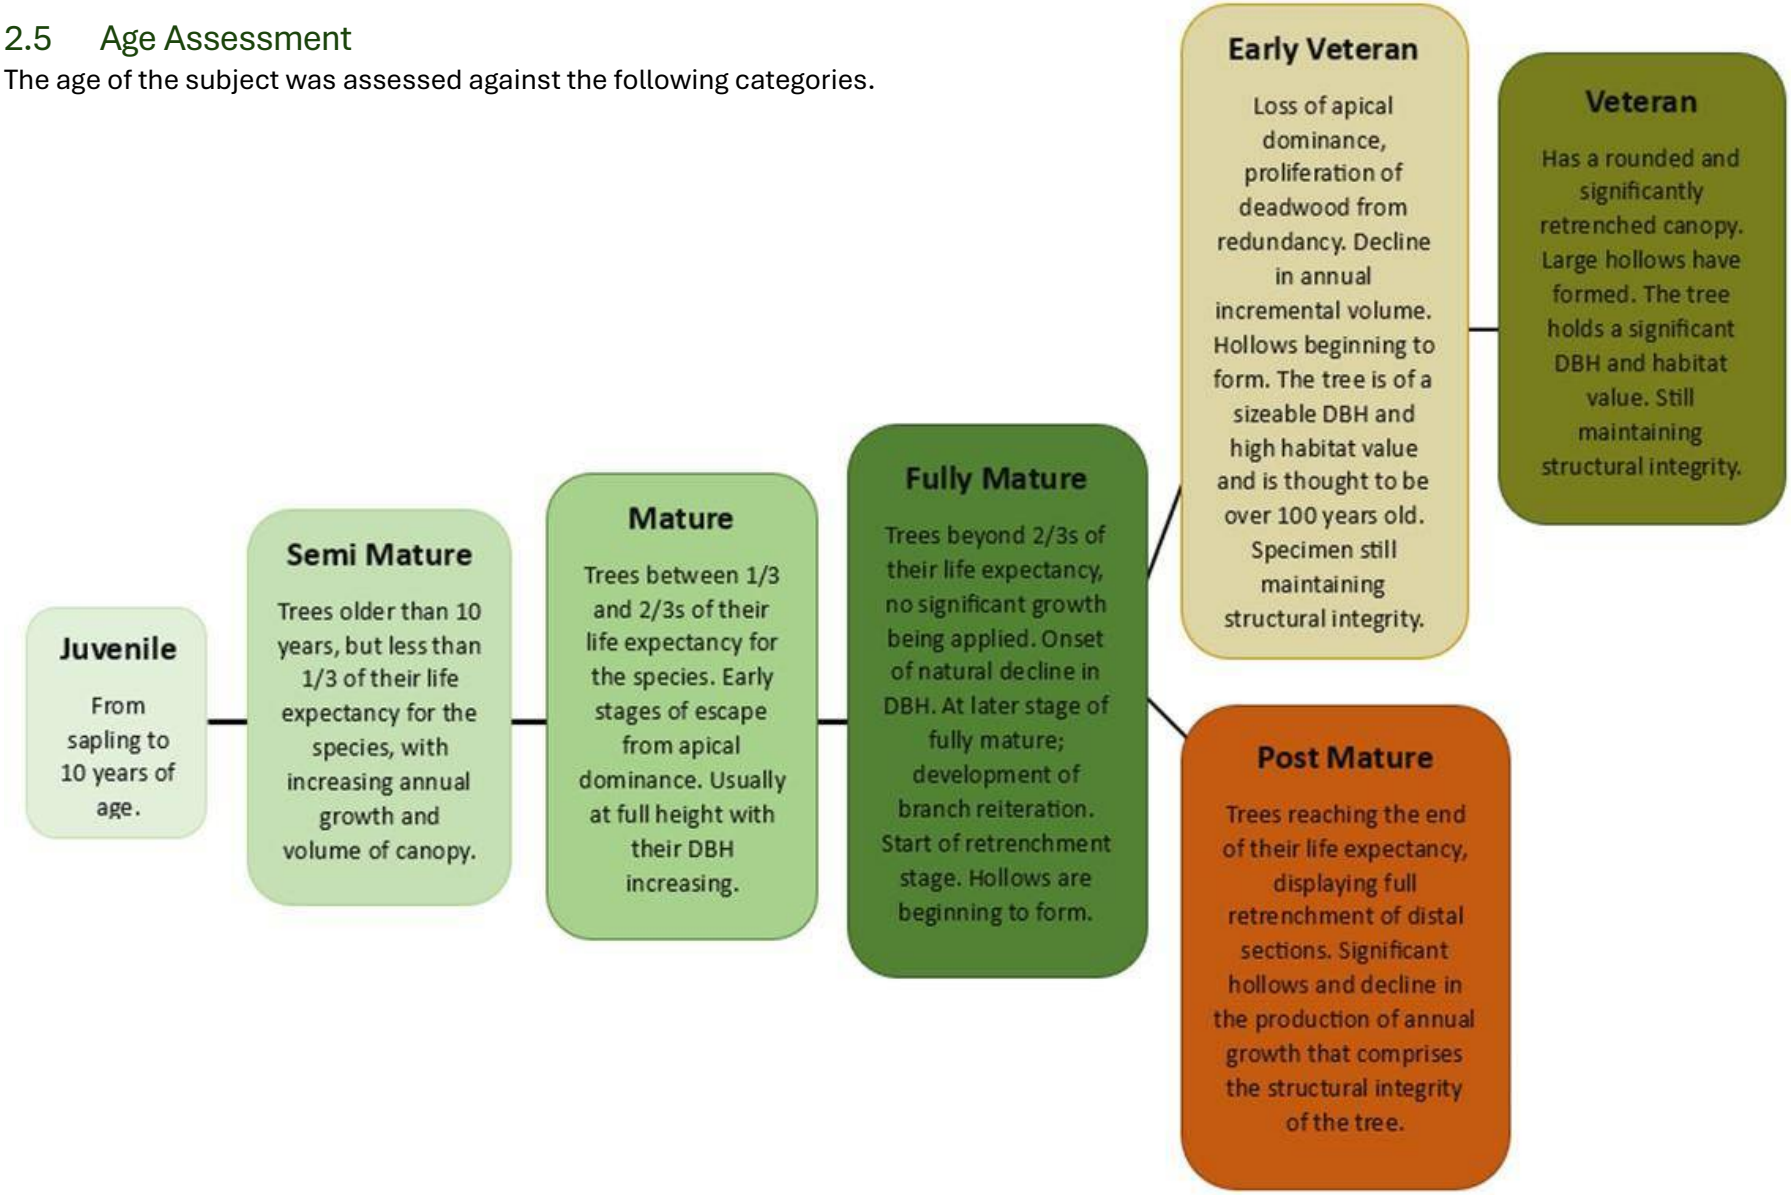
- **Good:** The tree will show good to excellent vigour throughout the tree for the species. The tree will exhibit a full and healthy canopy of foliage with only minimal pest or diseases evident.
- **Fair:** The tree is growing in a reasonable condition and shape with adequate canopy foliage for the species. Minor dead wood may be present throughout the crown, with reasonable colour and density when compared to a typical healthy specimen of that species.
- **Poor:** The tree appears to not be growing to its full capability with the canopy potentially visibly showing signs of openness and thinning with excessive amounts of dead or dying limbs. Evidence of established pest and disease issues will be evident or symptoms of stress indicating the tree is in decline.
- **Very Poor:** The tree is in decline with a very sparse canopy, and little chance of recovery. There would typically be excessive amounts of dead and dying material throughout its canopy.
- **Dead:** No living tissue was found; the tree is dead and should be removed. Unless it is otherwise noted as holding potential as a habitat tree.

2.4 Structure

- **Good:** The tree will have optimum spacings of first order branches, with open angles of attachment and no inclusions, the trunk is applying very visible signs of annualised response growth. There are no observable defects. This is a high-quality specimen for the species.
- **Fair:** The tree is displaying evenly spaced first order branches, with structurally sound unions, the trunk is applying annualised wood to maintain optimum structural integrity. There may be some minor defects, yet the tree is managing these appropriately. This is a "normal" specimen for the species.
- **Poor:** Minor structural defects observed, there may be damage to the cambium, included bark, which reduces the structural integrity of a union, and/or the tree may have been lopped, which has significantly altered its form.
- **Very poor:** The tree is in a state of decline with poor branch spacings and attachment. Major structural defects have been observed.
- **Has Failed:** The tree is of a significantly poor structural integrity to the point where A failure event was observed to have occurred.

2.5 Age Assessment

The age of the subject was assessed against the following categories.



2.6 Useful Life Expectancy

- **Greater than 40 + years**

  Very high quality and high value, these trees would hold such a condition that make them a valuable part of the environment/ landscape, would be considered to hold a Useful Life Expectancy (ULE) of greater than 40 years, thus allowing them to make a substantial contribution for a long period of time.

- **Greater than 20 to 40 years**

  High quality and high value, these trees would hold such a condition that make them a valuable part of the environment/ landscape, would be considered to hold a Useful Life Expectancy (ULE) of 40 years of greater, thus allowing them to make a substantial contribution.

- **11 and 20 years**

  Medium quality and medium value, trees of this category are thought of as making a significant contribution to the area they dwell in and would be considered to hold a ULE of a minimum of 20 years.

- **6 and 10 years**

  Low quality and low value. These trees would be regarded as being in an adequate condition that would see them being retained for a period that would allow new plantings to establish. They would be considered as having a ULE of 5 to 10 years.

- **1 to 5 years**

  Very Low quality and very low value, these trees would be regarded as having a poor form, displaying a low vitality, and may be exhibiting initial signs of structural decline. They would be considered to have a ULE of less than 5 years and are to be included in a plan for replacement.

- **No remaining ULE**. (Dead or hazardous)

  Trees in this category would be considered to hold such a condition that would potentially hold no value or in their current state it would be reasonable to undertake their removal for reasons of sound Arboricultural management, due to a high level of risk.

2.7 Origin of species

The definition of Native Vegetation is as stipulated in the Environmental Protections Act 1986, 3(1) & 51(A).

- **Native** – Part 5 - Division 2 – Clearing of native vegetation 51(A)

  native vegetation has the meaning given by section 3(1) but does not include vegetation that was intentionally sown, planted or propagated unless —

  (a) that vegetation was sown, planted or propagated as required under this Act or another written law; or

  (b) that vegetation is of a class declared by regulation to be included in this definition.

  Part 1 - Preliminary - Terms used (3(1)

  native vegetation means indigenous aquatic or terrestrial vegetation and includes dead vegetation unless that dead vegetation is of a class declared by regulation to be excluded from this definition but does not include vegetation in a plantation.

- **Introduced** – A species not Native as defined by section 3(1) & 51(A) of the Environmental Protections Act 1986, to the survey area. Introduced species may originate from other areas of Australia, or from outside Australia.

2.8 Habitat Value

- **High** – Trees with a DBH ≥500mm, with hollows of an estimated diameter ≥150mm.
- **Medium** Trees with a DBH ≥300mm to ≤500mm with hollows of any size up to an estimated 140mm in diameter. Trees with one or more nests throughout the canopy.
- **Low** – Trees without hollows, but with nests, or the potential for either, it may have one or more beehives.
- **Future Value** – Trees with size or spread suitable for potential habitat formation or selection, or young trees of suitable species for future habitat value.
- **Roosting Value** – Tree does not have the potential to develop hollows but is suitable for habitat or perching.
- **No Value** – Tree is not suitable for hollows, nesting, or hives.

2.9 VALID Tree Risk Assessment Explained

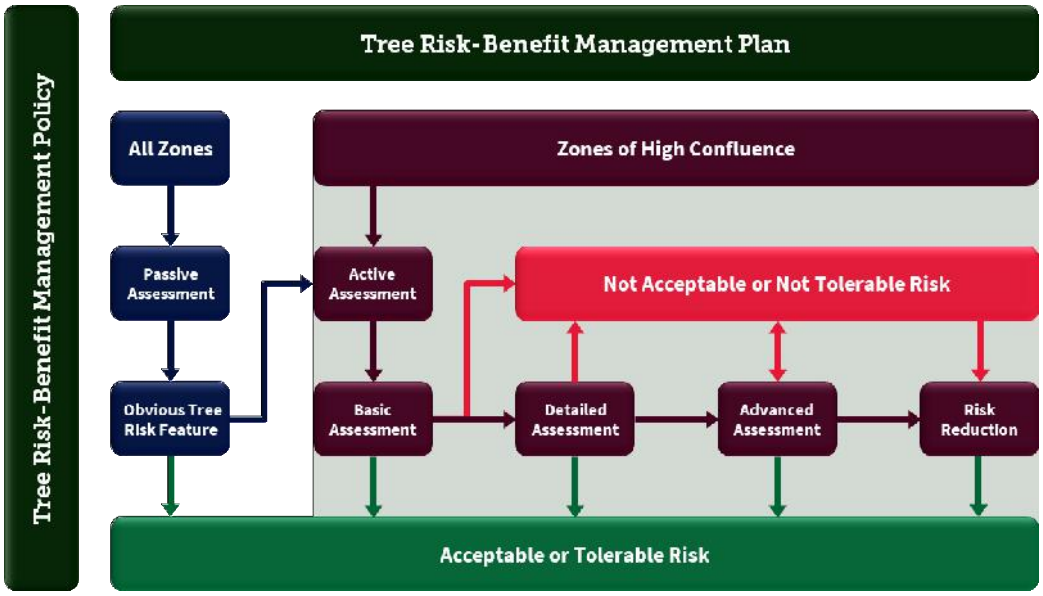
Why and how we're going to manage the risk from our trees and branches falling

This flowchart shows the structure of our Tree Risk-Benefit Management Strategy. Everything follows from the **Policy**. The Policy sets out our position on trees, their benefits, and the risks. In brief, our Policy says;

- Trees give us many benefits that we need
- The overall risk from trees and branches falling is extremely low
- We can't remove the risk entirely. Trees are living structures that sometimes shed branches or fall during severe weather
- Our duty of care, when managing the risk, is to be reasonable, proportionate, and reasonably practicable
- We're going to manage the risk to an Acceptable or Tolerable level

The **Plan** explains how we'll carry out the Policy. We're going to manage the risk by **Passive Assessment** in all zones of use. And **Active Assessment** in **Zones of High Confluence** (high use and large trees).

The Strategy at a glance



Passive Assessment

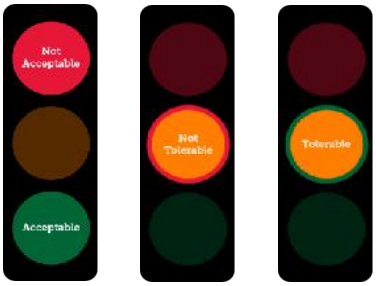
Passive Assessment is simply picking up on **Obvious Tree Risk Features** you can't help but notice as you go about your daily routine. Passive Assessment is our most valuable risk management asset because we carry it out in all zones of use, day in day out, at no additional cost.

Active Assessment | Basic > Detailed > Advanced

Active Assessment is where we have trained assessors looking for risks that might not be Acceptable or Tolerable. Active Assessment has 3 levels to it that increase in depth of evaluation. The 3 levels are, Basic > Detailed > Advanced. We carry out Active Assessment in Zones of High Confluence every 5 years.

Risk objectives & Risk ratings

VALID has applied 'ISO 31000 - Risk Management' and the 'Tolerability of Risk Framework' (ToR) to tree risk-benefit management and assessment, which we've adopted. In ISO risk terms, our 'objectives' are to grow, maintain, and conserve trees because of the many benefits they give us that we need. And, to manage the risk from tree failure to an Acceptable or Tolerable level. We have four easy-to-understand traffic light coloured risk ratings to show how we'll manage the risk.



Red **Not Acceptable** risks will be reduced to an Acceptable level

Amber **Not Tolerable** risks will be reduced to an Acceptable level, but with a lower priority than red Not Acceptable risks

Amber **Tolerable** risks will not be reduced but may require an increased frequency of assessment than green Acceptable risks

Green **Acceptable** risks will not be reduced

3.0 Location of Subject Tree

Subject trees are marked with a red dot.

4.0 Tree Assessments

River Red Gum Tree ID #1

Tree Details

Latin Name:	Eucalyptus camaldulensis
Common Name:	River Red Gum
Tree Age:	Semi mature
Health:	Fair
Structure:	Very Poor
Tree Height (Estimated) [m]:	7
Canopy Spread [m]:	5
DBH [cm]:	15.68
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [cm]:	0.56
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	2.59
Useful Life Expectancy:	11-20 years
Observations-Structural Issues:	Weak attachments, Epicormic shoots, Co-dominant tree
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	Remove to ground level - Full stump grind
Observation Comments:	This tree consists of suckers regrown from a residual stump
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

Longitude:	115.992145
Latitude:	-32.208818

Photos Street View Map View

image.jpg

Swamp Mahogany Tree ID #2

Tree Details

Latin Name:	Eucalyptus robusta
Common Name:	Swamp Mahogany
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	16
Canopy Spread [m]:	15
DBH [cm]:	57
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [cm]:	0.62
Tree Protection Zone (TPZ) [m]:	6.84
Structural Root Zone (SRZ) [m]:	2.71
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	Deadwood, Epicormic shoots, Bifurcated union
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	
Observation Comments:	
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

Longitude:	115.993695
Latitude:	-32.208916

Swamp Mahogany Tree ID #3

Tree Details

Latin Name:	Eucalyptus robusta
Common Name:	Swamp Mahogany
Tree Age:	Mature
Health:	Poor
Structure:	Fair
Tree Height (Estimated) [m]:	15
Canopy Spread [m]:	12
DBH [cm]:	63
DBH Range:	60-75cm
Diameter at Root Flare (DRF) [cm]:	0.82
Tree Protection Zone (TPZ) [m]:	7.56
Structural Root Zone (SRZ) [m]:	3.04
Useful Life Expectancy:	20-40 years
Observations-Structural Issues:	Deadwood, Epicormic shoots, Bifurcated union, Canopy decline
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	
Observation Comments:	Termite activity observed at base of trunk no active termites observed at this time
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

Longitude:	115.993724
Latitude:	-32.208851

Photos Street View Map View

Radiata Pine Tree ID #4

Tree Details

Latin Name:	Pinus radiata
Common Name:	Radiata Pine
Tree Age:	Mature
Health:	Dead
Structure:	Poor
Tree Height (Estimated) [m]:	10
Canopy Spread [m]:	7
DBH [cm]:	56
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [cm]:	0.64
Tree Protection Zone (TPZ) [m]:	6.72
Structural Root Zone (SRZ) [m]:	2.74
Useful Life Expectancy:	0 years
Observations-Structural Issues:	Broken Limb, Deadwood
Species origin:	Introduced
Habitat value:	No Value
Work Requirements:	Remove to ground level - Full stump grind
Observation Comments:	
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Longitude:	115.993733
Latitude:	-32.208770

Desert Ash Tree ID #5

Tree Details

Latin Name:	Fraxinus Oxycarpa
Common Name:	Desert Ash
Tree Age:	Semi mature
Health:	Fair
Structure:	Poor
Tree Height (Estimated) [m]:	8
Canopy Spread [m]:	7
DBH [cm]:	10.63
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [cm]:	0.27
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.91
Useful Life Expectancy:	20-40 years
Observations-Structural Issues:	Co-dominant tree
Species origin:	Introduced
Habitat value:	Roosting Value
Work Requirements:	
Observation Comments:	
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

Longitude:	115.993807
Latitude:	-32.208785

Claret ash Tree ID #6

Tree Details

Latin Name:	Fraxinus excelsior raywood
Common Name:	Claret ash
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	13
Canopy Spread [m]:	8
DBH [cm]:	18
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [cm]:	0.24
Tree Protection Zone (TPZ) [m]:	2.16
Structural Root Zone (SRZ) [m]:	1.82
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	
Species origin:	Introduced
Habitat value:	Roosting Value
Work Requirements:	
Observation Comments:	
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

Longitude:	115.993792

Cedar Wattle Tree ID #7

Tree Details

Latin Name:	Acaicia elata
Common Name:	Cedar Wattle
Tree Age:	Mature
Health:	Fair
Structure:	Poor
Tree Height (Estimated) [m]:	18
Canopy Spread [m]:	21
DBH [cm]:	51
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [cm]:	0.79
Tree Protection Zone (TPZ) [m]:	6.12
Structural Root Zone (SRZ) [m]:	3
Useful Life Expectancy:	20-40 years
Observations-Structural Issues:	Broken Limb, Bifurcated union, Crack
Species origin:	Introduced
Habitat value:	Roosting Value
Work Requirements:	Target Pruning required
Observation Comments:	Hazard beam fracture observed on lower western branch
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Longitude:	115.993852
Latitude:	-32.208908

Spotted Gum Tree ID #8

Tree Details

Latin Name:	Corymbia maculata
Common Name:	Spotted Gum
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	29
Canopy Spread [m]:	17
DBH [cm]:	56
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [cm]:	0.74
Tree Protection Zone (TPZ) [m]:	6.72
Structural Root Zone (SRZ) [m]:	2.92
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	Bifurcated union, Broken Limb, Deadwood
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	Remove Hanging Branch
Observation Comments:	Broken hanging limb from adjacent Acacia observed in western side of canopy approximately 12 m above ground level
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Narrow Leaved Peppermint Tree ID #9

Tree Details

Latin Name:	Eucalyptus nicholii
Common Name:	Narrow Leaved Peppermint
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	19
Canopy Spread [m]:	15
DBH [cm]:	62
DBH Range:	60-75cm
Diameter at Root Flare (DRF) [cm]:	0.72
Tree Protection Zone (TPZ) [m]:	7.44
Structural Root Zone (SRZ) [m]:	2.88
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	Deadwood, Bifurcated union
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	
Observation Comments:	Termite mound observed at base of trunk on the northern side. No active termites are observed at this time
VALID Tree Risk Assessment :	Acceptable level of risk

Trident Maple Tree ID #23

Tree Details

Latin Name:	Acer buergerianum
Common Name:	Trident Maple
Tree Age:	Semi mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	5
Canopy Spread [m]:	7
DBH [cm]:	12
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [cm]:	0.18
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	1.61
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	
Species origin:	Introduced
Habitat value:	Roosting Value
Work Requirements:	
Observation Comments:	
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

Longitude:	115.994065
Latitude:	-32.208966

Big leaf mahogany Tree ID #24

Tree Details

Latin Name:	Swietenia macrophylla
Common Name:	Big leaf mahogany
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	
Canopy Spread [m]:	19
DBH [cm]:	16
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [cm]:	0.61
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	2.69
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	Broken Limb, Bifurcated union, Deadwood
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	
Observation Comments:	Broken hanging branch observed to the eastern side of the canopy approximately 9 m above ground level
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Longitude:	115.994067
Latitude:	-32.208951

Cocos Palm Tree ID #25

Tree Details

Latin Name:	Syagrus romanzoffiana
Common Name:	Cocos Palm
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	10
Canopy Spread [m]:	5
DBH [cm]:	24
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [cm]:	0.41
Tree Protection Zone (TPZ) [m]:	2.88
Structural Root Zone (SRZ) [m]:	2.28
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	Impermeable surface over root plate
Species origin:	Introduced
Habitat value:	No Value
Work Requirements:	
Observation Comments:	
VALID Tree Risk Assessment :	Acceptable level of risk

Swamp Wattle Tree ID #34

Tree Details

Latin Name:	Acacia retinodes
Common Name:	Swamp Wattle
Tree Age:	Mature
Health:	Fair
Structure:	Very Poor
Tree Height (Estimated) [m]:	10
Canopy Spread [m]:	7
DBH [cm]:	43
DBH Range:	30-45cm
Diameter at Root Flare (DRF) [cm]:	0.37
Tree Protection Zone (TPZ) [m]:	5.16
Structural Root Zone (SRZ) [m]:	2.18
Useful Life Expectancy:	11-20 years
Observations-Structural Issues:	Leaning trunk, Weak attachments, Epicormic shoots
Species origin:	Introduced
Habitat value:	No Value
Work Requirements:	Remove to ground level - Full stump grind
Observation Comments:	This tree has been subject to whole tree failure and has re-grown from the failed root plate and fallen trunk
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Bushy Yate Tree ID #50

Tree Details

Latin Name:	Eucalyptus conferruminata
Common Name:	Bushy Yate
Tree Age:	Mature
Health:	Poor
Structure:	Poor
Tree Height (Estimated) [m]:	15
Canopy Spread [m]:	16
DBH [cm]:	56
DBH Range:	46-60cm
Diameter at Root Flare (DRF) [cm]:	0.64
Tree Protection Zone (TPZ) [m]:	6.72
Structural Root Zone (SRZ) [m]:	2.74
Useful Life Expectancy:	6-10 years
Observations-Structural Issues:	Weak attachments, Deadwood, Bifurcated union, Canopy decline, Root plate weakness, Leaning trunk
Species origin:	Native
Habitat value:	No Value
Work Requirements:	Remove to ground level - Full stump grind
Observation Comments:	Large termite mound observed on the northern side of the tree at the base. This is likly because of a leader failure at the base of tree. a wound on the eastern side indicates this.
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Swamp Mahogany Tree ID #52

Tree Details

Latin Name:	Eucalyptus robusta
Common Name:	Swamp Mahogany
Tree Age:	Mature
Health:	Fair
Structure:	Fair
Tree Height (Estimated) [m]:	22
Canopy Spread [m]:	19
DBH [cm]:	90
DBH Range:	>75cm
Diameter at Root Flare (DRF) [cm]:	0.9
Tree Protection Zone (TPZ) [m]:	10.8
Structural Root Zone (SRZ) [m]:	3.17
Useful Life Expectancy:	40+ years
Observations-Structural Issues:	Bifurcated union, Broken Limb, Deadwood
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	Remove Hanging Branch
Observation Comments:	
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Longitude:	115.995299
Latitude:	-32.208815

Rose Gum Tree ID #53

Tree Details

Latin Name:	Eucalyptus grandis
Common Name:	Rose Gum
Tree Age:	Semi mature
Health:	Poor
Structure:	Very Poor
Tree Height (Estimated) [m]:	12
Canopy Spread [m]:	8
DBH [cm]:	27
DBH Range:	16-30cm
Diameter at Root Flare (DRF) [cm]:	0.31
Tree Protection Zone (TPZ) [m]:	3.24
Structural Root Zone (SRZ) [m]:	2.02
Useful Life Expectancy:	11-20 years
Observations-Structural Issues:	Co-dominant tree, Deadwood
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	Remove to ground level - Shallow stump grind
Observation Comments:	This tree's structure has been compromised due to mechanical damage to its main trunk as well as being entangled within a wire fence
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Longitude:	115.995336
Latitude:	-32.208789

Eucalyptus Sp Tree ID #54

Tree Details

Latin Name:	Eucalyptus sp.
Common Name:	Eucalyptus Sp
Tree Age:	Semi mature
Health:	Poor
Structure:	Very Poor
Tree Height (Estimated) [m]:	8
Canopy Spread [m]:	6
DBH [cm]:	15.2
DBH Range:	8-16cm
Diameter at Root Flare (DRF) [cm]:	0.73
Tree Protection Zone (TPZ) [m]:	2
Structural Root Zone (SRZ) [m]:	2.9
Useful Life Expectancy:	6-10 years
Observations-Structural Issues:	Co-dominant tree
Species origin:	Introduced
Habitat value:	Future Value
Work Requirements:	Remove to ground level - Full stump grind
Observation Comments:	This tree is a group of suckers growing from a residual stump
VALID Tree Risk Assessment :	Condition of concern found- Refer to detailed assessment

Tree Location

Longitude:	115.995573
Latitude:	-32.209002

Marri Tree ID #55

Tree Details

Latin Name:	Corymbia calophylla
Common Name:	Marri
Tree Age:	Mature
Health:	Poor
Structure:	Fair
Tree Height (Estimated) [m]:	19
Canopy Spread [m]:	23
DBH [cm]:	104
DBH Range:	>75cm
Diameter at Root Flare (DRF) [cm]:	0.93
Tree Protection Zone (TPZ) [m]:	12.48
Structural Root Zone (SRZ) [m]:	3.21
Useful Life Expectancy:	20-40 years
Observations-Structural Issues:	Canopy decline, Bifurcated union, Deadwood
Species origin:	Native
Habitat value:	Future Value
Work Requirements:	
Observation Comments:	
VALID Tree Risk Assessment :	Acceptable level of risk

Tree Location

5.0 Conclusion

A total of twenty-five trees were identified as native species, as defined by the *Environmental Protection Act 1986 (EPA Act)*, while forty-five trees were classified as introduced species.

Fifty trees were assessed to be in *Fair* health, which is considered normal for their species. However, five of these trees exhibit poor or very poor structure.

Thirteen trees are recommended for removal due to being dead or exhibiting poor to very poor health and/or structure, resulting in a reduced ULE.

No trees were observed to contain hollows or show signs of foraging activity within their canopies. A single tree (Tree 45) was noted to contain a nest, assigning it a *Low* habitat value.

In terms of future habitat potential:

- 49 trees are considered to have *Future Habitat Value*.
- 8 trees provide *Roosting Value*.
- 12 trees have no habitat value due to being dead, exhibiting poor or very poor health and/or structure, being unsuitable species for habitat, or a combination of these factors.

8.0 Glossary of Arboricultural Terminology

Abscission - The shedding of a leaf or other short-lived part of a woody plant, involving the formation of a corky layer across its base; in some tree species twigs can be shed in this way.

Abiotic - Pertaining to non-living agents, e.g., environmental factors.

Absorptive roots - non-woody, short-lived roots, generally having a diameter of less than one millimetre, the primary function of which is uptake of water and nutrients.

Adaptive growth - In tree biomechanics, the process whereby the rate of wood formation in the cambial zone, as well as wood quality, responds to gravity and other forces acting on the cambium. This helps to maintain a uniform distribution of mechanical stress.

Adaptive roots - The adaptive growth of existing roots; or the production of new roots in response to damage, decay or altered mechanical loading.

Adventitious shoots - Shoots that develop other than from apical, axillary, or dormant buds; see also 'epicormic'

Anchorage - The system whereby a tree is fixed within the soil, involving cohesion between roots and soil and the development of a branched system of roots which withstands wind and gravitational forces transmitted from the aerial parts of the tree.

Axil - The place where a bud is borne between a leaf and its parent shoot.

Bacteria - Microscopic single-celled organisms, many species of which break down dead organic matter, and some of which cause diseases in other organisms.

Bark - A term usually applied to all the tissues of a woody plant lying outside the vascular cambium, thus including the phloem, cortex, and periderm; occasionally applied only to the periderm or the phellem.

Basidiomycotina (Basidiomycetes) - One of the major taxonomic groups of fungi.

Bolling - A term sometimes used to describe pollard heads.

Bottle-butt - A broadening of the stem base and buttresses of a tree, in excess of normal and sometimes denoting a growth response to weakening in that region, especially due to decay.

Bracing - The use of rods or cables to restrain the movement between parts of a tree.

Branch:

- **Primary** - A first order branch arising from a trunk or stem
- **Lateral** - A second order branch, subordinate to a primary branch
- **Sub-lateral** - A third order branch, originating from lateral branch

Branch bark ridge - The raised arc of bark tissues that forms within the acute angle between a branch and its parent stem.

Branch-collar - A visible swelling formed at the base of a branch.

Brown-rot - A type of wood decay in which cellulose is degraded, while lignin is only modified.

Buckling - An irreversible deformation of a structure subjected to a bending load.

Buttress zone - The region at the base of a tree where the major lateral roots join the stem, with buttress-like formations on the upper side of the junctions.

Cambium - Layer of dividing cells producing xylem (woody) tissue internally and phloem (bark) tissue externally.

Canker - A persistent lesion formed by the death of bark and cambium due to colonisation by fungi or bacteria.

Canopy species - Tree species that mature to form a closed forest canopy.

Cleaning out - The removal of dead, crossing, weak, and damaged branches, where this will not damage or spoil the overall appearance of the tree.

Compartmentalisation - The chemical confinement of disease, decay, or other dysfunction within a trees tissue, due to passive and/or active defences operating at the boundaries of the affected region.

Compression fork - An acute angled fork that is mechanically optimised for the growth pressure that two or more adjacent stems exert on each other.

Compression strength - The ability of a material or structure to resist failure when subjected to compressive loading, measurable in trees with special drilling devices.

Compressive loading - Mechanical loading which exerts a positive pressure, the opposite to tensile loading.

Tree Protection Zone - Area from which access is prohibited for the duration of the project to prevent damage to a tree.

Crown/Canopy - The main foliage bearing section of the tree.

Crown lifting - The removal of limbs and small branches to a specified height above ground level.

Crown thinning - The removal of a proportion of secondary branch growth throughout the crown to produce an even density of foliage around a well-balanced branch structure.

Crown reduction/shaping - A specified reduction in crown size whilst preserving, as far as possible, the natural tree shape.

Crown reduction/thinning - Reduction of the canopy volume by thinning to remove selected branches whilst preserving the natural tree shape.

Deadwood - Branch or stem wood bearing no live tissues.

Decurrent - A system of branching in which the crown is borne on a number of major widely spreading limbs of similar size.

Defect - In relation to tree hazards, any feature of a tree which detracts from the uniform distribution of mechanical stress, or which makes the tree mechanically unsuited to its environment.

Delamination - The separation of wood layers along their length, visible as longitudinal splitting.

Dieback - The death of parts of a woody plant, starting at shoot-tips or root-tips.

Disease - A malfunction in or destruction of tissues within a living organism, usually excluding mechanical damage; in trees, usually caused pathogens.

Distal - In the direction away from the main body of a tree or subject organism (cf. proximal)

Dominance - In trees, the tendency for a leading shoot to grow faster or more vigorously than the lateral shoots; also, the tendency of a tree to maintain a taller crown than its neighbours.

Dormant bud - An axial bud which does not develop into a shoot until after the formation of two or more annual wood increments; many such buds persist through the life of a tree and develop only if stimulated to do so.

Dysfunction - In woody tissues, the loss of physiological function, especially water conduction, in sapwood.

DBH (Diameter at Breast Height) - Stem diameter measured at a height of 1.4 metres or the nearest measurable point. Where measurement at a height of 1.4 metres is not possible, another height may be specified.

Endophytes - Micro-organisms that live inside plant tissues without causing overt disease, but in some cases capable of causing disease if the tissues become physiologically stressed.

Epicormic shoot - A shoot having developed from a dormant or adventitious bud and not having developed from a first-year shoot.

Excrescence - Any abnormal outgrowth on the surface of tree or other organism.

Excurrent - In trees, a system of branching in which there is a well-defined central main stem, bearing branches which are limited in their length, diameter, and secondary branching (cf. decurrent).

Fastigiate - Having upright, often clustered branches.

Flush cut - A pruning cut which removes part of the branch bark ridge and or branch-collar.

Girdling root - A root which circles and constricts the stem or roots possibly causing death of phloem and/or cambial tissue.

Habit - The overall growth characteristics, shape of the tree and branch structure.

Haloing - Removing or pruning trees from around the crown of another (usually mature or post-mature) tree to prevent it becoming supressed.

Hazard beam - An upwardly curved part of a tree in which strong internal stresses may occur without being reduced by adaptive growth, prone to longitudinal splitting.

Heartwood/false-heartwood - The dead central wood that has become dysfunctional as part of the aging processes and being distinct from the sapwood.

Heave - The lifting of pavements and other structures by root diameter expansion; also, the lifting of one side of a wind-rocked root-plate.

High canopy tree species - Tree species having potential to contribute to the closed canopy of a mature forest.

Incipient failure - In wood tissues, a mechanical failure which results only in deformation or cracking, and not in the fall or detachment of the affected part.

Included bark (ingrown bark) - Bark of adjacent parts of a tree (usually forks, acutely joined branches or basal flutes) which is in face-to-face contact.

Infection - The establishment of a parasitic micro-organism in the tissues of a tree or other organism.

Internode - The part of a stem between two nodes; not to be confused with a length of stem which bear nodes but no branches.

Lever arm - A mechanical term denoting the length of the lever represented by a structure that is free to move at one end, such as a tree or individual branch.

Lignin - The hard, cement-like constituent of wood cells; deposition of lignin within the matrix of cellulose microfibrils in the cell wall is termed Lignification.

Lions tailing - When a branch of a tree that has few if any side branches except at its end and is thus liable to snap due to end-loading.

Loading - A mechanical term describing the force acting on a structure from a particular source, e.g., the weight of the structure itself or wind pressure.

Longitudinal - Along the length (of a stem, root, or branch).

Lopping - A term often used to describe the removal of large branches from a tree, but also used to describe other forms of cutting

Minor deadwood - Deadwood of a diameter less than 25mm and or unlikely to cause significant harm or damage upon impact with a target.

Mulch - Material laid down over the rooting area of plants to help conserve moisture; mulch may consist of organic matter, or artificial material.

Mycelium - The body of a fungus, consisting of branched filaments (hyphae).

Occlusion - The process whereby a wound is progressively closed by the formation of new wood and bark around it.

Pathogen - A micro-organism which causes disease in another organism.

Photosynthesis - The process whereby plants use light energy to split hydrogen from water molecules and combine it with carbon dioxide to form the molecular building blocks for synthesizing carbohydrates and other biochemical products.

Phytotoxic - Toxic to plants.

Pollarding - The removal of the tree canopy, back to the stem or primary branches, usually to a point just outside that of the previous cutting.

Primary branch - A major branch, generally having a basal diameter greater than 0.25 x stem diameter.

Probability - A statistical measure of the likelihood that a particular event might occur.

Pruning - The removal or cutting back tree parts to growth points.

Rams-horn - In connection with wounds on trees, a roll of occluding tissues which has a spiral structure as seen in cross section.

Reactive Growth/Reaction Wood - Production of woody tissue in response to altered mechanical or external loading.

Residual wall - The amount of non-decayed wood remaining following decay of internal wood

Rib - A ridge of wood that has usually developed because of locally increased mechanical loading. Often associated with internal cracking in the wood of the stem, branch, or root.

Ringbarking (girdling) - The removal of a ring of bark and phloem around the circumference of a stem or branch, normally resulting in an inability to transport photosynthetic assimilates above or below the area of damage.

Ripewood - The older central wood of those tree species in which sapwood gradually ages without being converted to heartwood.

Root-collar - The transitional area between the stem/s and roots.

Root zone - Area of soils containing absorptive roots of the tree/s described. The Primary root zone is that which we consider of primary importance to the physiological well-being of the tree.

Sapwood - Living xylem tissues.

Selective delignification - A kind of wood decay (white-rot) in which lignin is degraded faster than cellulose.

Shedding - In woody plants, the normal abscission, rotting off or sloughing of leaves, floral parts, twigs, fine roots, and bark scales.

Shrub species - Woody perennial species forming the lowest level of woody plants in a forest or garden and not normally considered to be trees.

Simultaneous white rot - A kind of wood decay in which lignin and cellulose are degraded at about the same rate.

Soft-rot - A kind of wood decay in which a fungus degrades cellulose within the cells,

Spores - Propagules of fungi; most spores are microscopic and dispersed in air or water.

Sporophore - The spore bearing structure of fungi.

Stem/s - Principle above-ground structural component(s) of a tree that supports its branches.

Stress - In plant physiology, a condition under which one or more physiological functions are not operating within their optimum range, for example due to lack of water, inadequate nutrition, or extremes of temperature: In mechanics, the application of an external force to an object.

Stringy white-rot - The kind of wood decay produced by selective delignification.

Structural roots - Roots, generally having a diameter greater than 50 millimetres, and contributing significantly to the structural support and stability of the tree.

Structural root zone (ZRZ) - The zone of the root plate most likely to contain roots that are critical for anchorage and the stability of the tree.

Subsidence - In relation to soil or structures resting in or on soil, a sinking due to shrinkage when certain types of clay soil dry out, sometimes due to extraction of moisture by tree roots.

Subsidence - In relation to branches of trees, a term that can be used to describe a progressive downward bending due to increasing weight.

Taper - In stems and branches, the degree of change in girth along a given length.

Targets - In tree risk assessment persons or property or other things of value which might be harmed or damaged by falling parts of a tree

Topping/ Lopping - In arboriculture, the removal of the crown of a tree, or of a major proportion of it.

Torsional stress - Mechanical stress applied by a twisting force.

Translocation - In plant physiology, the movement of water and dissolved materials through the body of the plant.

Transpiration - The evaporation of moisture from the surface of a plant, especially via the stomata of leaves; it exerts a suction which draws water up from the roots and through the intervening xylem cells.

Tree Protection Zone (TRZ) - This is an area left around a tree to ensure protection of the above and below ground parts of the tree during construction works. It will usually include the SRZ and is usually recommended to be fenced off for the period of the works.

Understorey - A layer of vegetation consisting of younger or smaller trees and shrubs which are adapted to grow under lower light conditions.

Understorey tree species - Tree species not having potential to attain a size at which they can contribute to the closed high canopy of a forest or garden.

Vascular wilt - A type of plant disease in which water-conducting cells become dysfunctional.

Vessels - Water-conducting cells in plants, usually wide and long for hydraulic efficiency; generally, not present in coniferous trees.

Vigour - The expression of carbohydrate expenditure to growth (in trees).

Vitality - A measure of physiological condition.

White-rot - A range of kinds of wood decay in which lignin, usually together with cellulose and other wood constituents, is degraded.

Wind exposure - The degree to which a tree or other object is exposed to wind, both in terms of duration and velocity.

Windthrow - The blowing over of a tree at its roots.

Woundwood - Wood with atypical anatomical features, formed in the vicinity of a wound.

10.0 Appendices

10.1 Referral Guideline for Habitat Attributes

Extract of table 3 (page 17) – Referral Guideline for 3 WA Threatened Black Cockatoo Species.

Table 3 Referral thresholds for black cockatoos

Attribute	Referral threshold	Reasons
Breeding	Any loss of / impact upon known, suitable or potential nesting trees, and the habitat around these trees, is highly likely to require a referral to the minister. Loss of any potential nesting habitat is likely to require a referral to the minister.	As identified in the conservation planning documents, clearing of breeding habitat is a known threat to the 3 species[a] as a lack of tree hollows is a limiting factor. Habitat loss, habitat degradation, lack of recruitment, fire and competition are causing the scarcity of nesting resource[b].
High-quality native foraging habitat	Loss of greater than or equal to 1 ha of foraging habitat scoring 5-10 using the foraging quality scoring tool is likely to require referral to the minister. Foraging habitat quality is determined using the foraging quality scoring tool (see Appendix A) and takes into account context i.e. proximity of the impact site to important attributes.	As identified in the conservation planning documents, clearing of foraging habitat is a known threat to the 3 species. Habitat loss, habitat modification, climate change and fire are increasingly causing the scarcity of foraging resources[c]. These resources are critical at all stages of life for the species.
Lower-quality native foraging habitat	Loss of greater than or equal to 10 ha of foraging habitat scoring 0-4 using the foraging quality scoring tool is likely to require referral to the minister. Foraging habitat quality is determined using the foraging quality scoring tool (see Appendix A) and takes into account context i.e. proximity of the impact site to important attributes.	As identified in the conservation planning documents, clearing of foraging habitat is a known threat to the 3 species. Habitat loss, habitat modification, climate change and fire are increasingly causing the scarcity of foraging resources. These resources are critical at all stages of life for the species.
Exotic foraging habitat	Loss of greater than or equal to 1 ha of predominantly exotic habitat (e.g. Cape Lilac trees and pine trees) known to be utilised by black cockatoos is likely to require a referral to the minister.	As identified in the conservation planning documents, clearing of exotic foraging habitat is a known threat to the 3 species, noting that its value in comparison to native habitat depends upon the context.
Night roosting habitat	Removal of any part of a known night roosting site is likely to require referral to the minister.	As identified in the conservation planning documents, clearing of night roosting habitat is a known threat to the 3 species.

Note: Referral threshold described may be a result of direct loss, as well as loss from indirect and facilitated impacts.

11.0 Disclaimer and Limitations

a. References in this report to the "Consultant" means listed on the cover page as an employee of Westworks Consultancy.

b. References in this report to Westworks Consultancy means Westworks Group Pty Ltd as trustee for Ussheridan Trust trading as Westworks Consultancy (ACN 156 131 010 ABN 23 100 208 057).

c. In this report a reference to a group of persons includes a reference to all of them collectively, any two or more collectively and each of them individually.

d. The releases and limitations in this report apply to the Arborist, Westworks Consultancy and any employees, directors, contractors, and agents of the Arborist and/or Westworks Consultancy.

e. This report only covers identifiable defects present at the time of inspection. The Arborist and Westworks Consultancy accept no responsibility and cannot be held liable for any structural defect or unforeseen event/situation that may occur after the time of inspection.

f. The Arborist and Westworks Consultancy cannot and do not guarantee trees contained within this report will be structurally sound under all circumstances and cannot and do not guarantee that the recommendations made will categorically result in the tree being made "safe." Unless specifically mentioned this report will only be concerned with above ground inspections, that will be undertaken visually from ground level.

g. Trees are living organisms and as such cannot be classified as "safe" under any circumstances.

h. Failure events can occur for any number of reasons at any time and cannot always reasonably be foreseen, as any number of circumstances can come about at any time before or after an inspection that the Arborist and Westworks Consultancy may not be aware of.

i. All recommendations are made based on what can be reasonably identified at the time of inspection therefore the author accepts no liability for any recommendations made.

j. Care has been taken to obtain all information from reliable sources. All data has been verified or as much as possible; however, the Arborist and Westworks Consultancy can neither guarantee nor be responsible for the accuracy of information provided by others.

k. Booking of re-assessment after the prescribed period is the responsibility of the land manager/owner only. The Arborist and Westworks Consultancy are not responsible for providing reminders or notification that re assessment may be due and will not be held responsible to reinspect the listed trees until requested.

l. The Arborist and Westworks Consultancy make no express warranties under this report.

m. Except as the report specifically states, or as contained in any express warranty provided in relation to any goods or services provided or to be provided, the report does not include by implication any other term, condition, or warranty in respect of the quality, merchantability, acceptability, fitness for purpose, condition, description, assembly, manufacture, design or performance of the goods or services or any contractual remedy for their failure.

n. If the client is a consumer nothing in the Repot restricts, limits, or modifies the client's rights or remedies against Westworks Consultancy for failure of a statutory guarantee under the ACL save to the extent lawfully permissible.

o. To the greatest extent permitted under law the Arborist and Westworks Consultancy are not liable to the client or any third party in any way under or in connection with the Report or in connection with the goods or services provided by them to the client or any third party.

p. To the greatest extent permitted under law the Arborist and Westworks Consultancy are not liable for any indirect or consequential losses or expenses suffered by the client or any third party, howsoever caused, including but not limited to loss of turnover, profits, business or goodwill or any liability to any other party.

q. The client expressly acknowledges and agrees that:

   i. it has not relied upon, any service involving skill and judgement, or on any advice, recommendation, information, or assistance given by the Arborist or Westworks Consultancy, their agents, contractors, or employees in relation to any goods or services or their use or purpose.

   ii. it has not made known, whether expressly or by implication, to the Arborist and Westworks Consultancy any purpose for which it requires the goods or services and it has the sole responsibility of satisfying itself that any goods or services as suitable for the use of the client.

   iii. nothing in this Report is to be interpreted as excluding, restricting, or modifying the application of any non-excludable State or Federal legislation applicable to the sale of goods or supply of service.

   iv. Any reinspection is the responsibility of the tree owner to arrange as required.
