

Arboricultural Report - Balcatta Recycling Centre

December 13, 2024
Total Tree Count:
145

Brief

This consultant has been commissioned by the City of Stirling to carry out an inspection of 145 trees within the Balcatta Recycling Centre and submit a report based on the findings. The trees are located to the north of the City of Stirling Operations Centre, within an area outlined by the client. The trees inspected were located within the proposed works area and around the western and eastern perimeter. The survey outlines the trees health and structural condition and requires an inspection of each tree and its surroundings in respect of the issues at the present time and the potential for future limb failure.

The objective of the audit was to undertake an inspection of each tree, carry out an examination of each tree as delineated upon the map attached, to assess each trees health & structure, conduct a Helliwell evaluation and itemise remedial tree surgery works.

This site is proposed to undergo works to upgrade the existing Recycling Centre, however no confirmed plans have been provided at this time.

The survey scope requires:

- The identification of tree species and tagging with a tree number.
- Measurement of the height & canopy spread of the trees.
- Measurement of trunk diameters.
- Tree age.
- Current health and structural condition of the trees.
- Problems identified and itemised.
- Retention Value (Low, Medium, High).
- ULE (Useful Life Expectancy).
- Tree Protection Zone Radius (TPZ).
- Structural Root Zone Radius (SRZ).
- Works priority rating.
- Recommended remedial pruning or other works that may be required.
- Helliwell Valuation

All trees are digitally mapped, and this consultant confirms that the site inspections were carried out on the 12th and 13th of December 2024 with a total of 145 trees audited.

The 145 trees inspected range from dead to good health and very poor to good structural condition at this time.

The Helliwell valuation for all 145 trees came in at a total value of **\$1,390,449.24**. This means that the trees on average are worth **\$9,589.00** each. A list of each tree and pricing is attached as an appendix to this report.

Remedial works

28 trees are recommended for some remedial works which consist predominantly of:

- Removal of major dead wood larger than 30mm in diameter held in the canopy.
- Removal of dead hanging branches held in the canopy.
- Canopy lift pruning.
- Minor boundary pruning.
- Removal of basal epicormic growth.

Priority rating

Due to the number of trees requiring pruning, this consultant has categorised the pruning works from low to moderate. The trees that require remedial works have been prioritised into the following category:

- **Low** – 27 trees with defects or problems requiring works within the next 12 months.
- **Moderate** – 1 tree with defects or problems requiring works within the next 6 months.
- **High** – 0 trees with defects or problems requiring works within the next 3 months.
- **Urgent** – 0 trees requiring works as soon as possible.

A list of remedial works and maps accompany this report.

Pruning of trees is to be limited to required works indicated within this report and approved by the project manager. No additional pruning is recommended to be undertaken without further arborist consultation and all approved pruning is to be carried out by a qualified Arborist in accordance with AS4373 – 2007 *Pruning of Amenity Trees*.

Excavation in proximity of trees to be retained is to be carried out by small, tracked machinery fitted with a flat bladed bucket with an Arborist Spotter wherever practicable. The initial use of smaller machinery adjacent trees to be retained is likely to limit root damage by allowing roots to be exposed and cleanly cut prior to larger machinery working the area, thereby preventing splitting and tearing of roots that may extend back to the base of the tree.

The proposed works are to be located outside the SRZ of all trees. Where works are proposed inside the TPZ of the trees, an Arborist Spotter would be required on site to oversee for tree roots which may be found. If roots are located, then the Arborist can assess the roots for pruning. Roots are to be cleanly cut using a hand saw or secateurs. Roots above 30mm diameter are not to be cut without authorisation from a qualified Arborist.

The removal of live canopy and major limbs may significantly damage the trees. Therefore, work methods and equipment must be suitable to the scale of works and operating space to ensure accidental canopy and structural damage are prevented.

It is also recommended that all trees are protected by temporary fencing to delineate tree protection areas consistent with AS4970-2009 (refer to below 'Appendix - Tree Protection Fencing') and that it is installed prior to works commencing. It is to be an area of tree and root protection with no digging and no storage of equipment or tools. No filling, trenching or other earthworks shall be carried out unless there is written arborist approval. Soil is not to be lowered or raised within this zone and no washing of tools or cement/paint or chemicals is to be deposited in this zone.

Where temporary fencing cannot be achieved due to the restricted amount of practicable space within the site during the development works, it is recommended to provide at least trunk/branch and ground protection to avoid mechanical injuries from small and large machinery.

Supplementary watering of the retained trees is required to minimise stress on the trees associated with site disruption and root loss. It is generally recommended to water once per week with a minimum of 600 liters per tree, however this may vary. Water is to be applied in a manner that minimises runoff and it is recommended that the initial watering incorporates a wetting agent to assist water infiltration.

Storage of tools and equipment and the storage of materials are recommended to be located within an open area, preferably not within 6m of trees to be retained. The parking of vehicles shall be located within open areas a minimum of 6.0m from the base of all adjacent trees.

The future management, maintenance and condition of the trees have a considerable bearing on their location, with safety to property and persons the main priority. Therefore, each tree retained is recommended to be re-inspected annually to ensure that the trees remain healthy and in a structurally sound condition with a level of risk that is acceptable.

Limitation of liability

Trees can be managed, but they cannot be controlled. To live or work near a tree involves a degree of risk. This report only covers identifiable defects present at the time of inspection. Paperbark Technologies accepts no responsibility and cannot be held liable for any structural defect or unforeseen event/situation or adverse weather conditions that may occur after the time of inspection. Paperbark Technologies cannot guarantee that the tree/s contained within this report will be structurally sound under all circumstances, and is not able to detect every condition that may possibly lead to the structural failure of a tree. Paperbark Technologies cannot guarantee that the recommendations made will categorically result in the tree being made safe. Unless specifically mentioned this report will only be concerned with above ground inspections, as such all observations have been visually assessed from ground level. Trees are living organisms and as such cannot be classified as safe under any circumstances. Trees fail in ways that the arboriculture industry does not fully understand. The recommendations are made on the basis of what can be reasonably identified at the time of inspection therefore Paperbark Technologies accepts no liability for any recommendations made. All care has been taken to obtain information from reliable sources, however Paperbark Technologies can neither guarantee nor be responsible for the accuracy of information provided by others. In the event that reinspection of the tree/s is recommended it is the client's responsibility to make arrangements with Paperbark Technologies.

Appendix - Tree Protection Fencing

(AS4970- 2009 Protection of trees on development sites)

LEGEND:

- 1 Chain wire mesh panels with shade cloth (if required) attached, held in place with concrete feet.
- 2 Alternative plywood or wooden paling fence panels. This fencing material also prevents building materials or soil entering the TPZ.
- 3 Mulch installation across surface of TPZ (at the discretion of the project arborist). No excavation, construction activity, grade changes, surface treatment or storage of materials of any kind is permitted within the TPZ.
- 4 Bracing is permissible within the TPZ. Installation of supports should avoid damaging roots.
