

# **Clearing Permit Decision Report**

## 1. Application details

Permit application details

Permit application No.:

Permit type:

Purpose Permit

Proponent details

Proponent's name:

BHP Billiton Iron Ore Pty Ltd

1.3. Property details

Property:

Iron Ore (Mount Newman) Agreement Act 1964, Mineral Lease 244SA (AML 70/244); Iron Ore (Mount Newman) Agreement Act 1964, Special Lease for Mining Operations 3116/3687, Document I 154279 L, Lot 19 on Deposited Plan 48921, Lot 65 on Deposited

Plan 48920

Local Government Area:

Shire of East Pilbara

Colloquial name:

Jimblebar Junction to Newman Rail Project

Application

Clearing Area (ha)

No. Trees

Method of Clearing

For the purpose of:

282

Mechanical Removal

Construction and maintenance of water pipelines,

powerlines, railways and associated works

Decision on application

**Decision on Permit Application:** 

**Decision Date:** 

27 September 2012

#### 2. Site Information

# **Existing environment and information**

2.1.1. Description of the native vegetation under application

**Vegetation Description** 

Beard Vegetation Associations have been mapped for the whole of Western Australia and are useful to look at vegetation extent in a regional context. Three Beard Vegetation Associations are located within the proposed clearing area (GIS Database):

- 1. Beard Vegetation Association 18: Low woodland; Mulga (Acacia aneura);
- 2. Beard Vegetation Association 29: Sparse low woodland; Mulga, discontinuous in scattered groups; and
- 3. Beard Vegetation Association 82: Hummock grasslands, low tree steppe; Snappy Gum over Triodia wiseana.

ENV Australia Pty Ltd (2009) mapped 11 vegetation associations from the proposed clearing area during a flora and vegetation survey undertaken between 14 and 17 July 2009:

- 1a Hummock Grassland of Triodia sp. Shovelanna Hill (S. van Leeuwen 3835) and Triodia pungens with Open Shrubland of Acacia bivenosa and Acacia aneura var. aneura with Scattered Low Trees of Eucalyptus leucophloia subsp. leucophloia;
- 1b Hummock Grassland of Triodia sp. Shovelanna Hill (S. van Leeuwen 3835) with Low Open Shrubland of Acacia hilliana and Acacia adoxa var. adoxa with Scattered Low trees of Eucalyptus leucophloia subsp. leucophloia;
- 1c Hummock Grassland of Triodia sp. Shovelanna Hill (S. van Leeuwen 3835) and Triodia wiseana with Open Shrubland of Grevillea wickhamii subsp. hispidula and Hakea chordophylla;
- 1d Open Hummock Grassland of Triodia pungens with Open Shrubland of Acacia aneura var. aneura, Acacia bivenosa and Acacia synchronicia with Scattered Trees of Corymbia aspera;
- 1e Hummock Grassland of Triodia pungens with Low Open Shrubland of Bonamia rosea, Kennedia prorepens and Scaevola parvifolia subsp. pilbarae over Scattered Mallees of Eucalyptus gamophylla;
- 1f Open Hummock Grassland of Triodia sp. Shovelanna Hill (S. van Leeuwen 3835) and Triodia pungens with Shrubland of Acacia bivenosa and Acacia tenuissima with Scattered Mallees of Eucalyptus gamophylla;
- 1g Open Hummock Grassland of Triodia pungens with Open Shrubland of Acacia sclerosperma subsp. sclerosperma, Acacia bivenosa and Acacia synchronicia with Scattered Mallees of Eucalyptus trivalva;

2a - Open Tussock Grassland of Eulalia aurea and \*Cenchrus ciliaris with Open Shrubland of Acacia coriacea subsp. pendens, Hakea lorea subsp. lorea and Eremophila longifolia with Open Woodland of Corymbia aspera and

Corymbia hamersleyana;

3a - Tussock Grassland of *Themeda triandra* and *Eriachne*mucronata with High Open Shrubland of *Grevillea wickhamii subsp. hispidula, Petalostylis labicheoides* and
Eremophila macmillaniana with Open Woodland of *Corymbia hamersleyana* and *Eucalyptus gamophylla*;

4a - Open Woodland of Eucalyptus victrix and Eucalyptus camaldulensis var. obtusa over Tussock Grassland of \*Cenchrus ciliaris and Eulalia aurea with High Open Shrubland of Acacia citrinoviridis; and

5a - Shrubland of Acacia monticola and Acacia bivenosa, over Open Tussock Grassland of Eriachne benthamii with Open Hummock Grassland of Triodia pungens with Scattered Low Trees of Corymbia hamersleyana, Eucalyptus victrix and Eucalyptus leucophloia subsp. leucophloia.

\* = introduced flora species

#### Clearing Description

BHP Billiton Iron Ore Pty Ltd has applied to clear up to 282 hectares from 11 separate areas between Newman and Jimblebar Junction. The 11 areas proposed for clearing (colloquially termed blocks A – K inclusive) total approximately 640 hectares and are spaced over a distance of approximately 20 kilometres.

The proposed clearing will allow the proponent to source borrow material and undertake drainage control works associated with railway construction and maintenance activities for the Newman - Port Hedland 'Mainline'. The clearing will also allow for the construction and maintenance of water pipelines and powerlines.

Native vegetation clearing will be undertaken via mechanical means. Topsoil and vegetation removed during clearing operations will be stockpiled for future rehabilitation works of areas not required for permanent infrastructure.

#### **Vegetation Condition**

Pristine: No obvious signs of disturbance (Keighery, 1994);

To:

Completely Degraded: No longer intact; completely/almost completely without native species (Keighery, 1994).

#### Comment

Clearing permit CPS 3373/2 was granted by the Department of Mines and Petroleum on 20 October 2011 and allowed for the clearing of 282 hectares of native vegetation. An application to amend this permit was received by the Department of Mines and Petroleum on 16 August 2012. The application requested an amendment to include the purpose for the construction and maintenance of water pipelines and powerlines. The amount of clearing will remain at 282 hectares. The duration of the permit has also been extended by 5 years to allow the rehabilitation condition to be implemented.

#### 3. Assessment of application against clearing principles

#### Comments

BHP Billiton Iron Ore Pty Ltd has applied to amend the purpose to include for the construction and maintenance of water pipelines and powerlines. The permit has been extended by another 5 years to allow the implementation of a rehabilitation condition. There are no additional environmental impacts associated with this amendment. Therefore, the assessment of the clearing principles is consistent with the assessment in the clearing permit decision report CPS 3373/2.

#### Planning instrument, Native Title, Previous EPA decision or other matter.

#### Comments

There is one native title claim over the area under application (GIS Database). This claim (WC05/6) was registered with the National Native Title Tribunal on 11 August 2010 (GIS Database). However, the mining tenure has been granted in accordance with the future act regime of the *Native Title Act 1993* and the nature of the act (i.e. the proposed clearing activity) has been provided for in that process, therefore, the granting of a clearing permit is not a future act under the *Native Title Act 1993*.

There are 11 registered Aboriginal Sites of Significance within the application area (Site IDs: 6702, 17394, 9187, 9188, 9189, 9190, 9191, 9192, 9193, 10132, 10138) (GIS Database). It is the proponent's responsibility to comply with the *Aboriginal Heritage Act 1972* and ensure that no Aboriginal Sites of Significance are damaged through the clearing process.

It is the proponent's responsibility to liaise with the Department of Environment and Conservation and the Department of Water to determine whether a Works Approval, Water Licence, Bed and Banks Permit, or any other licences or approvals are required for the proposed works.

## Methodology

GIS Database:

- Aboriginal Sites of Signficance
- Native Title claims Registered with the NNTT

## **Definitions:**

{Atkins, K (2005). Declared rare and priority flora list for Western Australia, 22 February 2005. Department of Conservation and Land Management, Como, Western Australia}:-

Priority One - Poorly Known taxa: taxa which are known from one or a few (generally <5) populations which are under threat, either due to small population size, or being on lands under immediate threat, e.g. road verges, urban areas, farmland, active mineral leases, etc., or the plants are under threat, e.g. from disease, grazing by feral animals, etc. May include taxa with threatened populations on protected lands. Such taxa are under consideration for declaration as 'rare flora', but are in urgent need of further survey.

Priority Two - Poorly Known taxa: taxa which are known from one or a few (generally <5) populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as 'rare flora', but are in urgent need of further survey.

Priority Three - Poorly Known taxa: taxa which are known from several populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as 'rare flora', but are in need of further survey.

P4 Priority Four – Rare taxa: taxa which are considered to have been adequately surveyed and which, whilst being rare (in Australia), are not currently threatened by any identifiable factors. These taxa require monitoring every 5–10 years.

R Declared Rare Flora – Extant taxa (= Threatened Flora = Endangered + Vulnerable): taxa which have been adequately searched for, and are deemed to be in the wild either rare, in danger of extinction, or otherwise in need of special protection, and have been gazetted as such, following approval by the Minister for the Environment, after recommendation by the State's Endangered Flora Consultative Committee.

X Declared Rare Flora - Presumed Extinct taxa: taxa which have not been collected, or otherwise verified, over the past 50 years despite thorough searching, or of which all known wild populations have been destroyed more recently, and have been gazetted as such, following approval by the Minister for the Environment, after recommendation by the State's Endangered Flora Consultative Committee.

{Wildlife Conservation (Specially Protected Fauna) Notice 2005} [Wildlife Conservation Act 1950] :-

Schedule 1 - Fauna that is rare or likely to become extinct: being fauna that is rare or likely to become extinct, are declared to be fauna that is need of special protection.

- Schedule 2 Fauna that is presumed to be extinct: being fauna that is presumed to be extinct, are declared to be fauna that is need of special protection.
- Schedule 3 Birds protected under an international agreement: being birds that are subject to an agreement between the governments of Australia and Japan relating to the protection of migratory birds and birds in danger of extinction, are declared to be fauna that is need of special protection.
- Schedule 4 Other specially protected fauna: being fauna that is declared to be fauna that is in need of special protection, otherwise than for the reasons mentioned in Schedules 1, 2 or 3.

{CALM (2005). Priority Codes for Fauna. Department of Conservation and Land Management, Como, Western Australia}:-

- P1 Priority One: Taxa with few, poorly known populations on threatened lands: Taxa which are known from few specimens or sight records from one or a few localities on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, active mineral leases. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.
- P2 Priority Two: Taxa with few, poorly known populations on conservation lands: Taxa which are known from few specimens or sight records from one or a few localities on lands not under immediate threat of habitat destruction or degradation, e.g. national parks, conservation parks, nature reserves, State forest, vacant Crown land, water reserves, etc. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.
- P3 Priority Three: Taxa with several, poorly known populations, some on conservation lands: Taxa which are known from few specimens or sight records from several localities, some of which are on lands not under immediate threat of habitat destruction or degradation. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.
- P4 Priority Four: Taxa in need of monitoring: Taxa which are considered to have been adequately surveyed, or for which sufficient knowledge is available, and which are considered not currently threatened or in need of special protection, but could be if present circumstances change. These taxa are usually represented on conservation lands.
- Pf Priority Five: Taxa in need of monitoring: Taxa which are not considered threatened but are subject to a specific conservation program, the cessation of which would result in the species becoming threatened within five years.

## Categories of threatened species (Environment Protection and Biodiversity Conservation Act 1999)

EX Extinct: A native species for which there is no reasonable doubt that the last member of the species has died.

EX(W) Extinct in the wild: A native species which:

- (a) is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- (b) has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.
- CR Critically Endangered: A native species which is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.
- EN Endangered: A native species which:
  - (a) is not critically endangered; and
  - (b) is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.

VU Vulnerable: A native species which:

- (a) is not critically endangered or endangered; and
- (b) is facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with the prescribed criteria.
- CD Conservation Dependent: A native species which is the focus of a specific conservation program, the cessation of which would result in the species becoming vulnerable, endangered or critically endangered within a period of 5 years.

#### Principles for clearing native vegetation:

- (a) Native vegetation should not be cleared if it comprises a high level of biological diversity.
- (b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.
- (c) Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.
- (d) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.
- (e) Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.
- (f) Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.

- (g) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.
- (h) Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
- (i) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.
- (j) Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding.
