•	he native vegetation under application	
Vegetation Description	The vegetation of the application area is broadly mapped as the following Beard vegetation association:	
	2901: Mosaic: Medium woodland; <i>Allocasuarina cristata</i> and goldfields blackbutt Shrublands; <i>Acacia quadrimarginea</i> thicket (GIS Database).	
	A flora and vegetation survey was conducted over the application area by Botanica Consulting during December,	

2015. The following vegetation associations were recorded within the application area (Botanica Counsulting, 2015):

Eucalyptus Woodlands

CLP-EW1

Low woodland Eucalyptus salmonophloia / E. transcontinentalis over low scrub of Eremophila scoparia/ Exocarpos aphyllus and dwarf scrub of Atriplex nummularia subsp. spathulata / Maireana georgei on clay-loam Woodlands plain; and

CLP-EW2

Forest of Eucalyptus ravida over open low scrub of Eremophila scoparia and low heath of Maireana oppositifolia/ Ptilotus obovatus on clay-loam plain.

Casuarina Forests and Woodlands/Eucalypt Woodland CLP-CFW/EW1

Low woodland of Casuarina pauper / Eucalyptus clelandii over low scrub of Eremophila scoparia / Eremophila pustulata / Scaevola spinescens and dwarf scrub of Acacia erinacea / Olearia muelleri on undulating clay loam plain.

Mallee Woodlands and Shrublands

CLP-MWS1

Open tree mallee of Eucalyptus ebbanoensis subsp. ebbanoensis over scrub of Acacia ramulosa var. ramulosa / Senna artemisioides subsp. filifolia and dwarf scrub of Olearia muelleri / Ptilotus obovatus on clayloam plain.

Acacia Forests and Woodlands

RH-AFW1

Low woodland of Acacia ramulosa var. ramulosa / A. guadrimarginea over low scrub of Eremophila granitica / Melaleuca hamata and open dwarf scrub of Solanum lasiophyllum on rocky hillslope.

Casuarina forest and Woodlands

RH-CFW1

Low woodland of Casuarina pauper over low scrub of Eremophila scoparia / Acacia acuminata and open dwarf scrub of A. erinacea / Senna artemisioides subsp. filifolia / Dodonaea lobulata on rocky hillslope.

		Eucalypt Woodlands		
		RH-EW1 Low woodland of Eucalyptus clelandii over low scrub of Acacia erinacea / Eremophila scoparia and open dwarf scrub of Dodonaea lobulata / Senna artemisioides subsp. filifolia on rocky hillslope.		
		Mallee Woodlands and Shrublands RH-MWS1		
		Open tree mallee of <i>Eucalyptus griffithsii</i> over low woodland of <i>Acacia acuminata / Eremophila scoparia / Scaevola spinescens</i> and dwarf scrub of <i>Olearia muelleri / Ptilotus obovatus</i> rocky hillslope; and		
		RH-MWS2 Tree mallee of <i>Eucalyptus flavida</i> over heath of <i>Eremophila pustulata</i> and dwarf scrub of <i>Westringia rigida</i> on rocky hillslope.		
		There are also cleared degraded areas within the application area.		
Clearing Desc	ription	Enterprise Project. Paddington Gold Pty Ltd proposes to clear up to 300 hectares of native vegetation within a boundary of approximately 819 hectares, for the purpose of mineral production. The project is located approximately 50 kilometres north-west of Kalgoorlie, within the Shire of Kalgoorlie-Boulder.		
Vegetation Condition		Good: Structure significantly altered by multiple disturbance; retains basic structure/ability to regenerate (Keighery, 1994).		
		То:		
		Completely Degraded: No longer intact; completely/almost completely without native species (Keighery, 1994).		
Comment		The vegetation condition was derived from GIS datasets, aerial imagery and a vegetation survey conducted by Botanica Consulting (2015).		
		The proposed clearing is for mineral production.		
		Clearing permit CPS 3560/1 was granted by the Department of Mines and Petroleum, now the Department of Mines, Industry Regulation and Safety (DMIRS) on 25 March 2010 and was valid from 24 April 2010 to 24 April 2015. The clearing permit authorised the clearing of 100 hectares within an area of approximately 713 hectares. On 13 October 2011, CPS 3560/1 was amended to increase the area authorised to clear from 100 hectares to 200 hectares. On 8 January 2015, CPS 3560/2 was amended to extend the permit duration to 24 April 2018. On 12 May 2016 CPS 3560/3 was amended to increase the amount of clearing from 200 to 300 hectares and increase the clearing permit boundary from 713 to 819 hectares.		
		On 2 February 2018, the Permit Holder applied to amend CPS 3560/4 to extend the permit duration to 24 April 2023. The area of clearing authorised and the permit boundaries remained unchanged.		
2		nulication ancient Classing Dringinlas		
3. Assessment of application against Clearing Principles				
Comments	April 202 unchang	nit Holder has applied to amend the clearing permit to extend the permit duration by five years to 24 3. The size of the area approved to clear (300 hectares), and the permit boundary remains ed. The amendment is unlikely to result in any significant change to the environmental impacts of the d clearing (GIS Database).		
	matters i been revi	ndment application has been assessed against the clearing principles, planning instruments and other n accordance with s.510 of the <i>Environmental Protection Act 1986</i> . Environmental information has iewed, and the assessment of the proposed clearing against the clearing principles remains consistent assessment contained in decision reports CPS 3560/1, 3560/2, 3560/3 and 3560/4.

Planning In	strument,	, Native Title, previous EPA decision or other matter.		
Comments	been reg tenure ha	one Native Title claim over the area under application (DPLH, 2018). This claim (WC2017/001) has istered with the National Native Title Tribunal on behalf of the claimant group. However, the mining as been granted in accordance with the future act regime of the <i>Native Title Act 1993</i> and the nature of .e. the proposed clearing activity) has been provided for in that process, therefore, the granting of a		

clearing permit is not a future act under the Native Title Act 1993.

There are no registered Aboriginal Sites of Significance within the application area (DPLH, 2018). It is the proponent's responsibility to comply with the *Aboriginal Heritage Act* 1972 and ensure that no Aboriginal Sites of Significance are damaged through the clearing process.

It is the proponent's responsibility to liaise with the Department of Water and Environmental Regulation and the Department of Biodiversity Conservation and Attractions, to determine whether a Works Approval, Water Licence, Bed and Banks Permit, or any other licences or approvals are required for the proposed works.

Methodology DPLH (2018)

{DPaW (2017) Conservation Codes for Western Australian Flora and Fauna. Department of Parks and Wildlife, Western Australia}:-

- Т
- Threatened species:

Published as Specially Protected under the *Wildlife Conservation Act 1950*, listed under Schedules 1 to 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora (which may also be referred to as Declared Rare Flora).

Threatened fauna is that subset of 'Specially Protected Fauna' declared to be 'likely to become extinct' pursuant to section 14(4) of the *Wildlife Conservation Act 1950*.

Threatened flora is flora that has been declared to be 'likely to become extinct or is rare, or otherwise in need of special protection', pursuant to section 23F(2) of the *Wildlife Conservation Act* 1950.

The assessment of the conservation status of these species is based on their national extent and

ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be facing an extremely high risk of extinction in the wild. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 1 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.

EN Endangered species

Threatened species considered to be facing a very high risk of extinction in the wild. Published as Specially Protected under the *Wildlife Conservation Act 1950,* in Schedule 2 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.

VU Vulnerable species

Threatened species considered to be facing a high risk of extinction in the wild. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 3 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.

EX Presumed extinct species

Species which have been adequately searched for and there is no reasonable doubt that the last individual has died. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Presumed Extinct Fauna and Wildlife Conservation (Rare Flora) Notice for Presumed Extinct Flora.

IA Migratory birds protected under an international agreement

Birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and the Bonn Convention, relating to the protection of migratory birds. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 5 of the Wildlife Conservation (Specially Protected Fauna) Notice.

CD Conservation dependent fauna

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened. Published as Specially Protected under the *Wildlife Conservation Act 1950,* in Schedule 6 of the Wildlife Conservation (Specially Protected Fauna) Notice.

OS Other specially protected fauna

Fauna otherwise in need of special protection to ensure their conservation. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 7 of the Wildlife Conservation (Specially Protected Fauna) Notice.

P Priority species

Species which are poorly known; or

Species that are adequately known, are rare but not threatened, and require regular monitoring. Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

P1 Priority One - Poorly-known species:

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

P2 Priority Two - Poorly-known species:

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

P3 Priority Three - Poorly-known species:

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need

of further survey.

P4

Priority Four - Rare, Near Threatened and other species in need of monitoring:

(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands.

(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for Vulnerable, but are not listed as Conservation Dependent.

(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

Principles for clearing native vegetation:

- (a) Native vegetation should not be cleared if it comprises a high level of biological diversity.
- (b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.
- (c) Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.
- (d) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.
- (e) Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.
- (f) Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.
- (g) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.
- (h) Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
- (i) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.
- (j) Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding.
