

Clearing Permit Decision Report

Railway construction, pipelines and associated works

1. Application details

1.1. Permit application details

Permit application No.:

4598/3

Permit type:

Purpose

1.2. Proponent details

Proponent's name:

Robe River Limited

1.3. Property details

Property:

Iron Ore (Robe River) Agreement Act 1964, Mineral Lease 248SA (AML 70/248)

Local Government Area:

Shire of Ashburton

Colloquial name:

Mesa J Trail Track Evaluation Project

1.4. Application

Clearing Area (ha)

No. Trees

Method of Clearing

For the purpose of:

Mechanical Removal

1.5. Decision on application

Decision on Permit Application:

Grant

Decision Date:

26 September 2013

2. Site Information

2.1. Existing environment and information

2.1.1. Description of the native vegetation under application

Vegetation Description

Beard vegetation associations have been mapped for the whole of Western Australia and are useful to look at vegetation in a regional context. One Beard vegetation association has been mapped within the application area:

Beard vegetation association 609: Mosaic: Hummock grasslands, open low tree steppe; bloodwood with sparse kanji shrubs over soft spinifex / Hummock grasslands, open low tree steppe; snappy gum over *Triodia wiseana* on a lateritic crust (Government of Western Australia, 2013; GIS Database).

Astron Environmental Services (2011) conducted a flora survey of the application area and surrounding areas on 1 June 2011, and described ten vegetation communities within the application area:

EcEvMgCYPvCEc: Euclayptus camaldulensis, E. Victrix open forest over Melaleuca glomerata tall open scrub over Cyperus vaginiatus open sedgeland over *Cenchrus ciliaris open tussock grassland;

MJ01a: Corymbia hamersleyana scattered low trees over Acacia trachycarpa, A. colei and A. synchronicia tall shrubland over Triodia epactia hummock grassland and Cenchrus ciliaris open tussock grassland;

MJ02a: Corymbia hamersleyana and Acacia inaequilatera scattered low trees over Hakea lorea and Acacia synchronicia scattered tall shrubs over Triodia epactia and T. wiseana hummock grassland and Cenchrus ciliaris open tussock grassland;

MJ03a: Mixed Acacia species tall shrubland (*A. colei, A. elachantha, A. ancistrocarpa, A. synchronicia and A. trachycarpa*) over *Gossypium australe* scattered shrubs over *Triodia epactia* hummock grassland and *Cenchrus ciliaris* very open tussock grassland;

MJ03d: Schoenoplectus subulatus, Cyperus vaginatus and Typha domingensis sedgeland over herbland of mixed species (Lobelia arnhemiaca, Ammannia baccifera, Centipeda minima, Cyperus iria and Eragrostis tenellula);

MJ04a: Acacia xiphophylla low woodland over Acacia synchronicia scattered tall shrubs over Senna artemisioides subsp. oligophylla scattered shrubs over Triodia epactia hummock grassland and Cenchrus ciliaris scattered tussock grasses:

MJ05a: Corymbia hamersleyana scattered low trees over Acacia bivenosa tall shrubland over scattered low shrubs/shrubs of Acacia synchronicia, Indigofera monophylla and Gossypium robinsonii over Triodia wiseana hummock grassland;

MJ05c: Corymbia candida subsp. candida and C. Hamersleyana scattered low trees over Acacia bivenosa, Eremophila longifolia and Senna artemisioides subsp. oligophylla shrubaland over Triodia epactia grassland;

MJ05f: Corymbia hamersleyana scattered low trees over mixed Acacia species (A. colei, A. bivenosa, A. trachycarpa, A. sclerosperma and tumida var. pilbarensis) and Hakea lorea tall shrubland over Triodia epactia hummock grassland and Cenchrus ciliaris open tussock grassland; and

MJ05g: Corymbia hamersleyana scattered low trees over Acacia inaequilatera scattered tall shrubs over Acacia

bivenosa, A. ancistrocarpa and Senna glutinosa subsp. pruinosa tall shrubland over Triodia wiseana hummock grassland.

grassiane

Clearing Description

Mesa J Trail Track Evaluation Project. Robe River Limited is proposing to clear up to 20 hectares of native vegetation within a total boundary of approximately 87.2 hectares, for the purpose of geotechnical investigations and construction of rail, pipeworks and associated infrastructure. The project is located approximately 12 kilometres

west of Onslow within the Shire of Ashburton.

Vegetation Condition Excellent: Vegetation structure intact; disturbance affecting individual species, weeds non-aggressive (Keighery,

1994);

To:

Degraded: Structure severely disturbed; regeneration to good condition requires intensive management (Keighery,

1994)

Comment The vegetation condition was derived from a vegetation survey conducted by Astron Environmental Services

(2011).

Clearing Permit CPS 4598/1 was granted by the Department of Mines and Petroleum (DMP) on 24 November, 2011 and authorised the clearing of up to 20 hectares or native vegetation within an area totalling approximately 78.53 hectares. CPS 4598/1 was amended on 6 December 2012 to increase the clearing permit boundary by 8.67 hectares to accommodate new high voltage overhead powerlines and lighting. Robe River Limited has applied to amend CPS 4598/2 to add installation of pipeline infrastructure to the purpose of the clearing permit.

3. Assessment of application against clearing principles

Comments

This amendment is to amend the purpose on the permit to allow for the installation of pipeline infrastructure. The amount of clearing authorised and the clearing permit boundary will remain the same. As this is an administrative change only, there are no additional environmental impacts and the assessment of the clearing principles is consistent with the assessment in Clearing Permit decision report CPS 4598/2.

Planning instrument, Native Title, Previous EPA decision or other matter.

Comments

There is one Native Title claim over the area under application (WC99/12). This claim has been registered with the Native Title Tribunal on behalf of the claimant groups. However, the mining tenure has been granted in accordance with the future act regime of the *Native Title Act 1993* and the nature of the act (i.e. the proposed clearing activity) has been provided for in that process, therefore the granting of a clearing permit is not a future act under the *Native Title Act 1993*.

There are four registered Aboriginal Site of Significance within the application area (Site IDs: 6267, 6460, 6590 and 6591) (GIS Database). It is the proponent's responsibility to comply with the *Aboriginal Heritage Act 1972* and ensure that no Aboriginal sites of significance are damaged through the clearing process.

It is the proponent's responsibility to liaise with the Department of Environment Regulation (formerly the Department of Environment and Conservation) and the Department of Water, to determine whether a Works Approval, Water Licence, Bed and Banks Permit, or any other licences or approvals are required for the proposed works.

Methodology

GIS Database:

- Aboriginal Sites of Significance
- Native Title Claims Registered with the NNTT

{Atkins, K (2005). Declared rare and priority flora list for Western Australia, 22 February 2005. Department of Conservation and Land Management, Como, Western Australia}:-

Priority One - Poorly Known taxa: taxa which are known from one or a few (generally <5) populations which are under threat, either due to small population size, or being on lands under immediate threat, e.g. road verges, urban areas, farmland, active mineral leases, etc., or the plants are under threat, e.g. from disease, grazing by feral animals, etc. May include taxa with threatened populations on protected lands. Such taxa are under consideration for declaration as 'rare flora', but are in urgent need of further survey.

P2 Priority Two - Poorly Known taxa: taxa which are known from one or a few (generally <5) populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as 'rare flora', but are in urgent need of further survey.

P3 Priority Three - Poorly Known taxa: taxa which are known from several populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as 'rare flora', but are in need of further survey.

Priority Four – Rare taxa: taxa which are considered to have been adequately surveyed and which, whilst being rare (in Australia), are not currently threatened by any identifiable factors. These taxa require monitoring every 5–10 years.

R Declared Rare Flora – Extant taxa (= Threatened Flora = Endangered + Vulnerable): taxa which have been adequately searched for, and are deemed to be in the wild either rare, in danger of extinction, or otherwise in need of special protection, and have been gazetted as such, following approval by the Minister for the Environment, after recommendation by the State's Endangered Flora Consultative Committee.

X Declared Rare Flora - Presumed Extinct taxa: taxa which have not been collected, or otherwise verified, over the past 50 years despite thorough searching, or of which all known wild populations have been destroyed more recently, and have been gazetted as such, following approval by the Minister for the Environment, after recommendation by the State's Endangered Flora Consultative Committee.

{Wildlife Conservation (Specially Protected Fauna) Notice 2005} [Wildlife Conservation Act 1950]:-

Schedule 1 — Fauna that is rare or likely to become extinct: being fauna that is rare or likely to become extinct, are declared to be fauna that is need of special protection.

Schedule 2 — Fauna that is presumed to be extinct: being fauna that is presumed to be extinct, are declared to be fauna that is need of special protection.

Schedule 3 — Birds protected under an international agreement: being birds that are subject to an agreement between the governments of Australia and Japan relating to the protection of migratory birds and birds in danger of extinction, are declared to be fauna that is need of special protection.

Schedule 4 — Other specially protected fauna: being fauna that is declared to be fauna that is in need of special protection, otherwise than for the reasons mentioned in Schedules 1, 2 or 3.

{CALM (2005). Priority Codes for Fauna. Department of Conservation and Land Management, Como, Western Australia}:-

P1 Priority One: Taxa with few, poorly known populations on threatened lands: Taxa which are known from few specimens or sight records from one or a few localities on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, active mineral leases. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.

P2 Priority Two: Taxa with few, poorly known populations on conservation lands: Taxa which are known

Page 3

from few specimens or sight records from one or a few localities on lands not under immediate threat of habitat destruction or degradation, e.g. national parks, conservation parks, nature reserves, State forest, vacant Crown land, water reserves, etc. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.

Priority Three: Taxa with several, poorly known populations, some on conservation lands: Taxa which are known from few specimens or sight records from several localities, some of which are on lands not under immediate threat of habitat destruction or degradation. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.

Priority Four: Taxa in need of monitoring: Taxa which are considered to have been adequately surveyed, or for which sufficient knowledge is available, and which are considered not currently threatened or in need of special protection, but could be if present circumstances change. These taxa are usually represented on conservation lands.

P5 Priority Five: Taxa in need of monitoring: Taxa which are not considered threatened but are subject to a specific conservation program, the cessation of which would result in the species becoming threatened within five years.

Categories of threatened species (Environment Protection and Biodiversity Conservation Act 1999)

EX Extinct: A native species for which there is no reasonable doubt that the last member of the species has died.

EX(W) Extinct in the wild: A native species which:

P4

CD

(e)

(h)

(i)

(j)

- (a) is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- (b) has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

CR Critically Endangered: A native species which is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.

EN Endangered: A native species which:

(a) is not critically endangered; and

 is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.

VU Vulnerable: A native species which:

(a) is not critically endangered or endangered; and

(b) is facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with the prescribed criteria.

Conservation Dependent: A native species which is the focus of a specific conservation program, the cessation of which would result in the species becoming vulnerable, endangered or critically endangered within a period of 5 years.

Principles for clearing native vegetation:

(a) Native vegetation should not be cleared if it comprises a high level of biological diversity.

(b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.

(c) Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare

(d) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.

Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.

(f) Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.

(g) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.

Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.

Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.

Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding.
