

# Clearing Permit Decision Report

## 1. Application details

### 1.1. Permit application details

Permit application No.: 5035/2  
Permit type: Purpose Permit

### 1.2. Proponent details

Proponent's name: Doray Minerals Limited

### 1.3. Property details

Property: Mining Lease 51/870  
Local Government Authority: Shire of Meekatharra  
Colloquial name: Andy Well Gold Project

### 1.4. Application

Clearing Area (ha)	No. Trees	Method of Clearing	For the purpose of:
87		Mechanical Removal	Mineral Production and associated activities

### 1.5. Decision on application

Decision on Permit Application: Grant  
Decision Date: 18 December 2014

## 2. Background

### 2.1. Existing environment and information

#### 2.1.1. Description of the native vegetation under application

##### Vegetation Description

The application area has been broadly mapped as the following two Beard vegetation associations (GIS Database):

- 29: Sparse low woodland; mulga, discontinuous in scattered groups; and
- 39: Shrublands; mulga scrub.

Mattiske Consulting Pty Ltd (2011) undertook a desktop survey and a flora and vegetation survey between 11 May and 14 May 2011 over the wider Andy Well exploration licence (E51/1217), which includes Mining Lease 51/870 and the clearing permit application area. A total of 69 sample sites were surveyed. Ten plant communities were identified within the survey area, three of which occur within the application area (Mattiske Consulting Pty Ltd, 2011):

##### Shrublands

**S1:** Open scrub of *Eremophila galeata* and emergent *Acacia aneura* var. *aneura* and *Acacia tetragonophylla* over *Ptilotus obovatus* var. *obovatus* and *Solanum lasiophyllum* over *Aristida contorta*, *Eriachne pulchella* subsp. *dominii* and other grass species on orange clay flats with variable quantities of quartz and other pebbles.

**S2:** Open scrub of *Acacia aneura* var. *aneura*, *Acacia pteraneura* and occasional *Acacia tetragonophylla* over mixed *Eremophila* species and *Ptilotus obovatus* var. *obovatus* over *Aristida contorta*, *Eriachne pulchella* subsp. *dominii* and *Dysphania kalpari* on orange sandy/loam to clay/loam flats with occasional coverage of pebbles.

##### Woodlands

**W1:** Woodland of *Acacia aneura* var. *aneura*, *Acacia ayersiana* and *Acacia tetragonophylla* over *Eremophila galeata* over *Ptilotus macrocephalus* over *Eragrostis pergracilis*, *Paspalidium basicladum* and other grass species and mixed herbaceous species on orange clay/loam flats.

##### Clearing Description

Andy Well Gold project. Doray Minerals Limited proposes to clear up to 87 hectares of native vegetation within a total boundary of approximately 336 hectares for the purpose of a mine pit and mining related infrastructure. The project is located approximately 50 kilometres northeast of Meekatharra, in the Shire of Meekatharra.

##### Vegetation Condition

Excellent: Vegetation structure intact; disturbance affecting individual species, weeds non-aggressive (Keighery, 1994);  
To  
Degraded: Structure severely disturbed; regeneration to good condition requires intensive management (Keighery, 1994).

##### Comment

The vegetation condition was derived from a survey conducted by Mattiske Consulting Pty Ltd (2011).  
Clearing permit CPS 5035/1 was granted by the Department of Mines and Petroleum on 21 June 2012, and was valid from 14 July 2012 to 14 July 2017. On 27 October 2014, Doray Minerals Limited applied to amend CPS 5035/1 to increase the area approved to clear from 77.5 hectares to 87 hectares, and to extend the permit expiry date to 14 July 2019. There is no change to the permit boundary.

### 3. Assessment of application against Clearing Principles

#### Comments

The amendment to increase the amount of clearing authorised by 9.5 hectares within the same permit boundary, and to extend the permit duration by two years, is unlikely to result in any significant change to the environmental impacts of the project.

The assessment of the proposed clearing against the clearing principles remains consistent with the assessment contained in decision report CPS 5035/1.

### Planning instrument, Native Title, RIWI Act Licence, EP Act Licence, Works Approval, Previous EPA decision or other matter.

#### Comments

There is one Native Title Claim (WC1999/046) over the area under application (GIS Database). This claim has been registered with the National Native Title Tribunal on behalf of the claimant group. However, the mining tenure has been granted in accordance with the future act regime of the *Native Title Act 1993* and the nature of the act (i.e. the proposed clearing activity) has been provided for in that process, therefore the granting of a clearing permit is not a future act under the *Native Title Act 1993*.

There are several registered Aboriginal Sites of Significance within the application area (GIS Database). It is the proponent's responsibility to comply with the *Aboriginal Heritage Act 1972* and ensure that no Aboriginal Sites of Significance are damaged through the clearing process.

It is the proponent's responsibility to liaise with the Department of Environment Regulation, the Department of Parks and Wildlife, and the Department of Water, to determine whether a Works Approval, Water Licence, Bed and Banks Permit, or any other licences or approvals are required for the proposed works.

The amendment application was advertised on 3 November 2014 by the Department of Mines and Petroleum inviting submissions from the public. No submissions were received in relation to this application.

#### Methodology

GIS Database:

- Aboriginal Sites of Significance
- Native Title Claims - Determined by the Federal Court
- Native Title Claims - Filed at the Federal Court
- Native Title Claims - Registered with the NNTT

**Definitions:**

{DPaW (2013) Conservation Codes for Western Australian Flora and Fauna. Department of Parks and Wildlife, Western Australia}:-

- T**      **Threatened species:**  
 Specially protected under the *Wildlife Conservation Act 1950*, listed under Schedule 1 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna or the Wildlife Conservation (Rare Flora) Notice for Threatened Flora (which may also be referred to as Declared Rare Flora).  
 Threatened Fauna and Flora are further recognised by the Department according to their level of threat using IUCN Red List criteria. For example Carnaby's Cockatoo *Calyptorhynchus latirostris* is specially protected under the *Wildlife Conservation Act 1950* as a threatened species with a ranking of Endangered.  
Rankings:  
 CR: Critically Endangered - considered to be facing an extremely high risk of extinction in the wild.  
 EN: Endangered - considered to be facing a very high risk of extinction in the wild.  
 VU: Vulnerable - considered to be facing a high risk of extinction in the wild.
- X**      **Presumed Extinct species:**  
 Specially protected under the *Wildlife Conservation Act 1950*, listed under Schedule 2 of the Wildlife Conservation (Specially Protected Fauna) Notice for Presumed Extinct Fauna and Wildlife Conservation (Rare Flora) Notice for Presumed Extinct Flora (which may also be referred to as Declared Rare Flora).
- IA**      **Migratory birds protected under an international agreement:**  
 Specially protected under the *Wildlife Conservation Act 1950*, listed under Schedule 3 of the Wildlife Conservation (Specially Protected Fauna) Notice.  
 Birds that are subject to an agreement between governments of Australia and Japan, China and The Republic of Korea relating to the protection of migratory birds and birds in danger of extinction.
- S**      **Other specially protected fauna:**  
 Specially protected under the *Wildlife Conservation Act 1950*, listed under Schedule 4 of the Wildlife Conservation (Specially Protected Fauna) Notice.
- P1**      **Priority One - Poorly-known species:**  
 Species that are known from one or a few collections or sight records (generally less than five), all on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, Shire, rail reserves and Main Roads WA road, gravel and soil reserves, and active mineral leases and under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes.
- P2**      **Priority Two - Poorly-known species:**  
 Species that are known from one or a few collections or sight records, some of which are on lands not under imminent threat of habitat destruction or degradation, e.g. national parks, conservation parks, nature reserves, State forest, unallocated Crown land, water reserves, etc. Species may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes.
- P3**      **Priority Three - Poorly-known species:**  
 Species that are known from collections or sight records from several localities not under imminent threat, or from few but widespread localities with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and known threatening processes exist that could affect them.
- P4**      **Priority Four - Rare, Near Threatened and other species in need of monitoring:**  
 (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands.  
 (b) Near Threatened. Species that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for Vulnerable.  
 (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.
- P5**      **Priority Five - Conservation Dependent species:**  
 Species that are not threatened but are subject to a specific conservation program, the cessation of which would result in the species becoming threatened within five years.

**Principles for clearing native vegetation:**

- (a) Native vegetation should not be cleared if it comprises a high level of biological diversity.
- (b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.
- (c) Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.
- (d) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.
- (e) Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.
- (f) Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.
- (g) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.
- (h) Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
- (i) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.
- (j) Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding.
