This specialist has knowledge of the weed condition (species and location) along the GGP. The specialist has recommended, based on their knowledge of the GGP weed condition, the GGP weed control is conducted in October/November 2020 rather than in August and January. The specialist reason that “due to the heat extremities in January, the targeted weed species are stressed and the high soil temperature results in rapid evaporation of herbicides and water, resulting in a lower uptake of the chemicals. Several weed species such as Saffron Thistle are yet to emerge in August as they are a spring growing plant and will not grow in cool soils. By January, many plant species have already produced seeds, resulting in further spread of the species.”</p> <p>Going forward, APA will continue to consult with a specialist and will act on their advice in terms of appropriate weed control timeframes.</p> <p>Given the above, we would like to request that going forward that the weed spraying program be carried out at least once in each 12 month period based on specialist advice, rather than in January and August, as this will ensure all weeds, including those conditioned in the CPS 5875/2, can be effectively targeted.</p> <p>Please note that the next spraying is due in August 2020, so a prompt assessment would be appreciated.</p>
