

Clearing Permit Decision Report

1. Application details

1.1. Permit application details

Permit application No.: 7356/2
Permit type: Purpose Permit

1.2. Proponent details

Proponent's name: GMA Garnet Pty Ltd

1.3. Property details

Property: Mining Lease 70/926
Local Government Area: Shire of Northampton
Colloquial name: Port Gregory Mine

1.4. Application

Clearing Area (ha)	No. Trees	Method of Clearing	For the purpose of:
29		Mechanical Removal	Mineral Production

1.5. Decision on application

Decision on Permit Application: Grant
Decision Date: 14 June 2018

2. Site Information

2.1. Existing environment and information

2.1.1. Description of the native vegetation under application

Vegetation Description Beard vegetation associations have been mapped for the whole of Western Australia. One Beard vegetation association has been mapped within the application area (GIS Database).

17: Shrublands; *Acacia rostellifera* thicket.

A vegetation survey was undertaken by GHD (2016) over the application area on 23 August 2016. Four vegetation types were delineated in the study area:

1: *Acacia rostellifera* Low Forest: Low Woodland to Open Forest of *Acacia rostellifera* over Scattered Shrubs of *Rhagodia preissii* subsp. *obovata*, *Stylobasium spathulatum*, *Pimelea microcephala* with *Commicarpus australis*, *Zygophyllum fruticosum*, *Tetragonia implexicoma* over Open Tussock Grassland of *Bromus diandrus*, *Avena barbata*, *Ehrharta longiflora* over Mixed Herbs of *Urospermum picroides*, *Sonchus oleraceus*, *Lysimachia arvensis*, *Arctotheca calendula*, *Trifolium* spp. on sandy soils.

2: *Acacia rostellifera* Tall Open Shrubland: Tall Open Shrubland of *Acacia rostellifera* over Scattered Shrubs of *Rhagodia preissii* subsp. *obovata*, with *Commicarpus australis*, *Enchylaena tomentosa*, *Tetragonia implexicoma*, *Solanum nigrum* over Open Tussock Grassland of *Bromus diandrus*, *Avena barbata*, *Ehrharta longiflora* over Mixed Herbs of *Urospermum picroides*, *Sonchus oleraceus*, *Lysimachia arvensis*, *Arctotheca calendula*, *Trifolium* spp. On sandy soils.

3: *Acacia rostellifera* Low Shrubland on Shallow Soils: Shrubland of *Acacia rostellifera* over Low Open Shrubland of *Scaevola tomentosa*, *Enchylaena tomentosa*, *Rhagodia* spp., with *Acanthocarpus preissii*, *Pimelea microcephala* over Open Tussock Grassland of *Bromus diandrus*, *Avena barbata*, *Ehrharta longiflora* over Mixed Herbs of *Urospermum picroides*, *Sonchus oleraceus*, *Lysimachia arvensis*, *Arctotheca calendula*, *Hypochaeris glabra* on shallow sandy and limestone soils.

4: Cleared/Degraded: Cleared Tracks and firebreaks, old paddocks with scattered regrowth of *Acacia rostellifera*, pasture grasses and weeds.

Clearing Description Port Gregory Mine
GMA Garnet Pty Ltd proposes to clear up to 29 hectares of native vegetation within a total boundary of approximately 63.89 hectares for the purpose of garnet extraction. The project is located approximately 12 kilometres north of Port Gregory in the Shire of Northampton.

Vegetation Condition Completely Degraded: No longer intact; completely/almost completely without native species (Keighery, 1994);
To:
Good: Structure significantly altered by multiple disturbance; retains basic structure/ability to regenerate (Keighery,

1994).

Comment

The vegetation condition was assessed by botanists from GHD (2016).

Clearing permit CPS 7356/1 was granted by the Department of Mines and Petroleum (now the Department of Mines, Industry Regulation and Safety) on 18 January 2017 and authorised the clearing of up to 29 hectares of native vegetation within a boundary of approximately 126.5 hectares. The purpose of the clearing was for extraction of garnet ore.

GMA Garnet Pty Ltd has applied to amend CPS 7356/1 for the purpose of decreasing the permit boundary.

3. Assessment of application against Clearing Principles

Comments

GMA Garnet has applied to amend CPS 7356/1 for the purpose of decreasing the permit boundary, which will result in the removal of Beard Vegetation Association 371 from the permit boundary. The proposed amendment will reduce potential impacts to Beard Vegetation Association 371, which currently has a conservation status of 'Vulnerable'. Under CPS 7356/1, the proposed impacts would have been approaching the 10% threshold at which this vegetation association would have been considered 'Endangered.'

The proposed amendment is unlikely to result in any other significant changes to the environmental impacts of the proposed clearing. The total area approved to clear (29 hectares) remains unchanged.

The amendment application has been assessed against the clearing principles, planning instruments and other matters in accordance with s.51O of the *Environmental Protection Act 1986*. Environmental information has been reviewed, and the assessment of the proposed clearing against the clearing principles remains consistent with the assessment contained in *decision report CPS 7356/1 apart from Condition (e), which is now 'not at variance to that Principle'*.

Methodology

GIS Database:
- Pre-European Vegetation

Planning Instrument, Native Title, previous EPA decision or other matter.

Comments

There is one native title claim over the area under application; WC00/001 (DPLH, 2018). This claim has been registered with the National Native Title Tribunal on behalf of the claimant group. However, the mining tenure has been granted in accordance with the future act regime of the *Native Title Act 1993* and the nature of the act (i.e. the proposed clearing activity) has been provided for in that process, therefore the granting of a clearing permit is not a future act under the *Native Title Act 1993*.

According to available databases, there are no registered Aboriginal Sites of Significance within the application area (DPLH, 2018). It is the proponent's responsibility to comply with the *Aboriginal Heritage Act 1972* and ensure that no Aboriginal Sites of Significance are damaged through the clearing process.

It is the proponent's responsibility to liaise with the Department of Water and Environmental Regulation and the Department of Biodiversity, Conservation and Attractions to determine whether a Works Approval, Water Licence, Bed and Banks Permit, or any other licences or approvals are required for the proposed works.

{DPaW (2017) Conservation Codes for Western Australian Flora and Fauna. Department of Parks and Wildlife, Western Australia}:-

T	<p>Threatened species: Published as Specially Protected under the <i>Wildlife Conservation Act 1950</i>, listed under Schedules 1 to 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora (which may also be referred to as Declared Rare Flora).</p> <p>Threatened fauna is that subset of ‘Specially Protected Fauna’ declared to be ‘likely to become extinct’ pursuant to section 14(4) of the <i>Wildlife Conservation Act 1950</i>.</p> <p>Threatened flora is flora that has been declared to be ‘likely to become extinct or is rare, or otherwise in need of special protection’, pursuant to section 23F(2) of the <i>Wildlife Conservation Act 1950</i>.</p> <p>The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.</p>
CR	<p>Critically endangered species Threatened species considered to be facing an extremely high risk of extinction in the wild. Published as Specially Protected under the <i>Wildlife Conservation Act 1950</i>, in Schedule 1 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.</p>
EN	<p>Endangered species Threatened species considered to be facing a very high risk of extinction in the wild. Published as Specially Protected under the <i>Wildlife Conservation Act 1950</i>, in Schedule 2 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.</p>
VU	<p>Vulnerable species Threatened species considered to be facing a high risk of extinction in the wild. Published as Specially Protected under the <i>Wildlife Conservation Act 1950</i>, in Schedule 3 of the Wildlife Conservation (Specially Protected Fauna) Notice for Threatened Fauna and Wildlife Conservation (Rare Flora) Notice for Threatened Flora.</p>
EX	<p>Presumed extinct species Species which have been adequately searched for and there is no reasonable doubt that the last individual has died. Published as Specially Protected under the <i>Wildlife Conservation Act 1950</i>, in Schedule 4 of the Wildlife Conservation (Specially Protected Fauna) Notice for Presumed Extinct Fauna and Wildlife Conservation (Rare Flora) Notice for Presumed Extinct Flora.</p>

- IA Migratory birds protected under an international agreement**
Birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and the Bonn Convention, relating to the protection of migratory birds. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 5 of the Wildlife Conservation (Specially Protected Fauna) Notice.
- CD Conservation dependent fauna**
Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 6 of the Wildlife Conservation (Specially Protected Fauna) Notice.
- OS Other specially protected fauna**
Fauna otherwise in need of special protection to ensure their conservation. Published as Specially Protected under the *Wildlife Conservation Act 1950*, in Schedule 7 of the Wildlife Conservation (Specially Protected Fauna) Notice.
- P Priority species**
Species which are poorly known; or
Species that are adequately known, are rare but not threatened, and require regular monitoring. Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.
- P1 Priority One - Poorly-known species:**
Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.
- P2 Priority Two - Poorly-known species:**
Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.
- P3 Priority Three - Poorly-known species:**
Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.
- P4 Priority Four - Rare, Near Threatened and other species in need of monitoring:**
(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands.
(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for Vulnerable, but are not listed as Conservation Dependent.
(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

Principles for clearing native vegetation:

- (a) Native vegetation should not be cleared if it comprises a high level of biological diversity.
- (b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.
- (c) Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.
- (d) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.
- (e) Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.

- (f)** Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.
- (g)** Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.
- (h)** Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
- (i)** Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.
- (j)** Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding.
