To be assessed in this manner, the proposed clearing action must be referred to the Commonwealth under the EPBC Act and deemed a 'controlled action' prior to submitting this application form.

For further information see *Form Annex C7* and *A guide to native vegetation clearing processes under the assessment bilateral agreement* available at www.der.wa.gov.au/our-work/clearing-permits.

Do you want your proposed clearing action assessed in accordance with, or under, an EPBC Act Accredited Process such as the assessment bilateral agreement?

	<p>If yes, provide details:</p> <p>Previous holders had flora and fauna studies done which we now hold. We understand that impact on DRF will be minimal. This program will require up to 6ha (conservative estimate) of clearing, and this will be minimized where possible. As the orientation of the area is not confirmed, a target diameter rectangular footprint has been shown on the plan to accommodate each. The proposed-on ground exploration activities are specifically designed to minimize environmental disturbance through maximizing the use of existing cleared access, pads and open spaces. Classic, in undertaking this program commits to:</p> <ul style="list-style-type: none"> • Locating activities on bare ground where practical • Limiting disturbance of the rootstock of any woody plants • Using existing cleared access and pad space where practical • Raised blade will be used for debris and overgrowth removal from these spaces to assist in the rehabilitation and revegetation process: • Cleared vegetative matter should be retained for use in site rehabilitation. • Ensure that topsoil's and subsoils are stripped and stockpiled separately – in the vicinity of the clearance area. <p>Previous drilling found hypersaline groundwater with variable light to moderate flow rates below 70 – 80m bgl which is consistent with groundwater characteristics of the region. Sumps are expected to contain all groundwater encountered unless an unusually high yield aquifer is encountered.</p> <p>In the events that excess groundwater is encountered, and groundwater cannot be managed by approved sumps, Operations will cease. Investigations into management options will be undertaken and activities will only recommence when an appropriate management measure is implemented. Sumps are allowed for in the drill hole “footprints” as shown on map.</p> <p>Groundwater management options that will be investigated if required include:</p> <ul style="list-style-type: none"> • Use nearby sumps if possible: if nearby sumps are available, these will be utilized to store excess groundwater encountered. Sumps will not be backfilled until program is complete. • Shorten drill holes: if large volumes of water are encountered at depth and cannot be managed through use of the sump. • Utilize above ground tank and truck disposal: This method has been used in the area previously, however using nearby sumps or shallower holes would be the preferred management method. <p>I confirm that Classic Minerals will:</p> <ol style="list-style-type: none"> 1. Locate (in previous survey reports or from other sources) or take new photos of the DRF identified around the Tenements we plan to drill on; 2. Provide copies of the photographs to all staff and contractors who enter site; 3. Incorporate the photos and DRF information into staff and contractor inductions to ensure that, if the DRF is encountered during clearing, operations or travels, that the staff and contractor respond appropriately and follow the DRF management plan/commitments.
