Part 4: Proposed clearing											
You must provide evidence that avoidance and mitigation options have been pursued to eliminate, reduce, or otherwise mitigate the need for, and scale of, the proposed clearing of native vegetation.	Have alternatives that would avoid or minimise the need for clearing been considered and applied? ✓ Yes □										
	If yes, provide details:										
	Hutt Lagoon community is of conservation significance. This community is listed as an Environmentally Sensitive Area and is listed in the Directory of Important Wetlands of Australia.										
	There are a large number of shorebirds and migratory waders recorded at the Hutt lagoon which are protected under international agreements (3 Threatened shorebirds and 23 species protected under international agreements).										
	Based on the current increasing level of visitation to view the Hutt lagoon and the disturbance created by uncontrolled access the viewing area will serve to provide a safe and more controlled access location which should reduce uncontrolled access and overall disturbance is an important factor to consider.										
	It is considered that the location of the parking and viewing area will have minimal impact on the wetland community as it is intended to use existing cleared/ disturbed areas and clearing is limited within that community.
