Part 1: Assessment bilateral agreement

The native vegetation clearing processes under Part V of the *Environmental Protection Act 1986* (WA) (EP Act) have been accredited by the Commonwealth of Australia under the *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act) and can be assessed under an assessment bilateral agreement.

To be assessed in this manner, the proposed clearing action must be referred to the Commonwealth under the EPBC Act and deemed a 'controlled action' prior to submitting this application form.

For further information see *Form Annex C7* and *A guide to native vegetation clearing processes under the assessment bilateral agreement* available at www.der.wa.gov.au/our-work/clearing-permits.

<p>You must provide evidence that avoidance and mitigation options have been pursued to eliminate, reduce or otherwise mitigate the need for, and scale of, the proposed clearing of native vegetation.</p>	Have alternatives that would avoid or minimise the need for clearing been considered and applied?	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
	<p>If yes, provide details:</p> <p>The road upgrade corridor was reduced from 22 m wide to 20 m wide and this reduced the total clearing required by 2.58 ha – from 7.28 ha to 5.25 ha. Not clearing a section of road corridor where the densest patch of Melaleuca tall shrubland vegetation occurs reduced proposed clearing by another 0.48 ha to 4.77 ha. By not removing five <i>Eucalyptus rudis</i> trees with a DBH ≥ 50 cm that occur within the upgrade corridor, impact to Carnaby's Cockatoo potential breeding habitat trees has been reduced to zero. Not pruning the higher canopy of trees in this area has reduced clearing by another 0.19 ha to 4.58 ha.</p> <p>The Shire has reduced overall clearing originally proposed by 2.70 ha, which is a reduction of 37%.</p> <p>Reducing the corridor width and not clearing in one of the wetland sections has reduced impact to Carnaby's Cockatoo foraging habitat from an original 5.31 ha to 3.58 ha (i.e. by 32.53%).</p> <p>Reducing the clearing width and not removing any trees or pruning branches from the higher canopy of trees in the <i>Eucalyptus rudis</i> vegetation type has reduced impact to Carnaby's Cockatoo potential breeding and roosting habitat from an original 0.24 ha to zero.</p> <p>Reducing the corridor width has reduced impact to the two Banksia woodland / forest vegetation types mapped in the corridor by 1.53 ha (from an initial 5.23 ha to 3.71 ha). Not clearing in one of the wetland areas has reduced clearing of Banksia woodland by another 0.18 ha to 3.53 ha. Therefore, clearing of these two vegetation types has been reduced by 32.51%.</p>		
<p>Refer to DWER's Clearing of native vegetation offsets procedure guideline available on the DWER website, and the Environmental Protection Authority's (EPA) WA Environmental Offsets Policy and Guidelines on the EPA website for further information.</p>	Do you want to submit a clearing permit offset proposal with your application?	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
	<p>If yes, provide details, and complete and attach Appendix A of the <i>Clearing of native vegetation offsets procedure guideline</i>.</p>
