	<i>and/or</i>										
	number of individual <b>trees</b> to be removed	0									
	Proposed method of clearing:	Mechanical clearing									
	Purpose of clearing:	<p>Expanding the existing quarry in an easterly direction.</p> <p>The NVCP application is for a purpose permit to clear 30ha of native vegetation within the boundaries of M08/272. The proposed quarry expansion to the east involves the clearing of 9.85ha. This NVCP has applied for 30ha to facilitate two further expansions, to the west and to the south of the present quarry. There will also be a need to relocate screening and stockpiling areas as the quarry expansions occur. The 30ha of applied for area is also provision against unexpected site works. The current quarry expansion to the east and relocation of infrastructure is covered by the MP submitted at the same time as this NVCP. Other expansions and infrastructure relocations would be the subject of future MP submissions.</p>									
Period within which clearing is proposed to be undertaken, e.g. May 2020 to June 2020 (taking note of the published assessment timeframes for DWER / DMIRS, as applicable)	<table border="1" style="width: 100%;"> <tr> <td style="width: 30%;"></td> <td style="width: 40%; text-align: center;">01/06/2021</td> <td style="width: 10%; text-align: center;">To</td> <td style="width: 15%; text-align: center;">01/06/2051</td> <td style="width: 10%;"></td> </tr> <tr> <td colspan="5">maximum period, actual depends on market demand for the product being mined.</td> </tr> </table>		01/06/2021	To	01/06/2051		maximum period, actual depends on market demand for the product being mined.				
	01/06/2021	To	01/06/2051								
maximum period, actual depends on market demand for the product being mined.											
Final land use:	<p>The post mining land use is consistent with that of the area was prior to mine development – conservation estate.</p> <p>To achieve this, the post quarrying landform will involve the restoration of all non-pit areas to landscapes as similar to the surrounding sand plains and rocky low hills as possible. The quarry pit will remain as a void with abandonment bunds outside of the zone of instability. The quarry pit will remain in perpetuity, however, isolated via a permanent encircling rock bund to prevent entry. The pit floor is above the water table but may pond rainwater for short periods after large rainfall events.</p>										
You must provide evidence that avoidance and mitigation options have been pursued to eliminate, reduce or otherwise mitigate the need for, and scale of, the proposed clearing of native vegetation.	<table border="1" style="width: 100%;"> <tr> <td style="width: 60%;">Have alternatives that would avoid or minimise the need for clearing been considered and applied?</td> <td style="width: 10%; text-align: center;"><input checked="" type="checkbox"/></td> <td style="width: 10%; text-align: center;">Yes</td> <td style="width: 10%; text-align: center;"><input type="checkbox"/></td> <td style="width: 10%; text-align: center;">No</td> </tr> </table>	Have alternatives that would avoid or minimise the need for clearing been considered and applied?	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No
