Notes

- This report is designed to support Local Governments with native vegetation clearing permit applications.
- This report is a desktop study and does not replace a site assessment

- The information generated in this report is correct to the best of WALGA's knowledge. WALGA takes no responsibility for decisions made using this report.
- Further information on how to interpret the datasets is available in the [Explanatory Notes](#).
- Further information about the clearing principles is available from the [Department of Water and Environment Regulation \(DWER\) "A guide to the assessment of applications to clear native vegetation"](#).

Interpreting this report

- This report will assist the user to determine if the proposed clearing is 'at variance', 'may be at variance', 'not likely to be at variance' or 'not at variance' to any of the clearing principles contained Schedule 5 of the Environmental Protection Act 1986 (EP Act).
- If using this report to complete an assessment as part of your desktop study under your Strategic Purpose Permit and an 'at variance' result is produced, you may refer your application to DER for clarification. Please use the template referral email located here (link to the template I have prepared). Please note that the Strategic Purpose Permit applies to clearing that is 'not at variance' or 'not likely to be at variance' to any of the clearing principles proposed clearing that 'may be at variance' or 'is at variance' will need to be referred to DER for review.
- If using this report as supporting information for a clearing permit application, please email this report, a covering sheet and accompanying shapefile with the application form and [payment \(Form C3\)](#) to the [DWER](#)
- If you are unsure about the levels of variance identified in this report and require further clarification, please seek further advice from DER by submitting a [referral form](#) via [email](#) or alternatively phone (08) 6364 7000.
- The 'may be at variance' and 'at variance' levels determined in this report identifies that a clearing principle requires further attention. A more detailed assessment (including a site visit may be required) and further identification of impacts may alter the variance levels. If you wish to seek clarification on the altered variance level, please seek advice from your Local Government Environment Team in the first instance and DWER via [email](#) or alternatively phone (08) 6364 7000, using your Permit Number for reference..
NB: Any actions you take should be accounted for and recorded. This information should be provided in your annual report and is subject to DWER auditing.

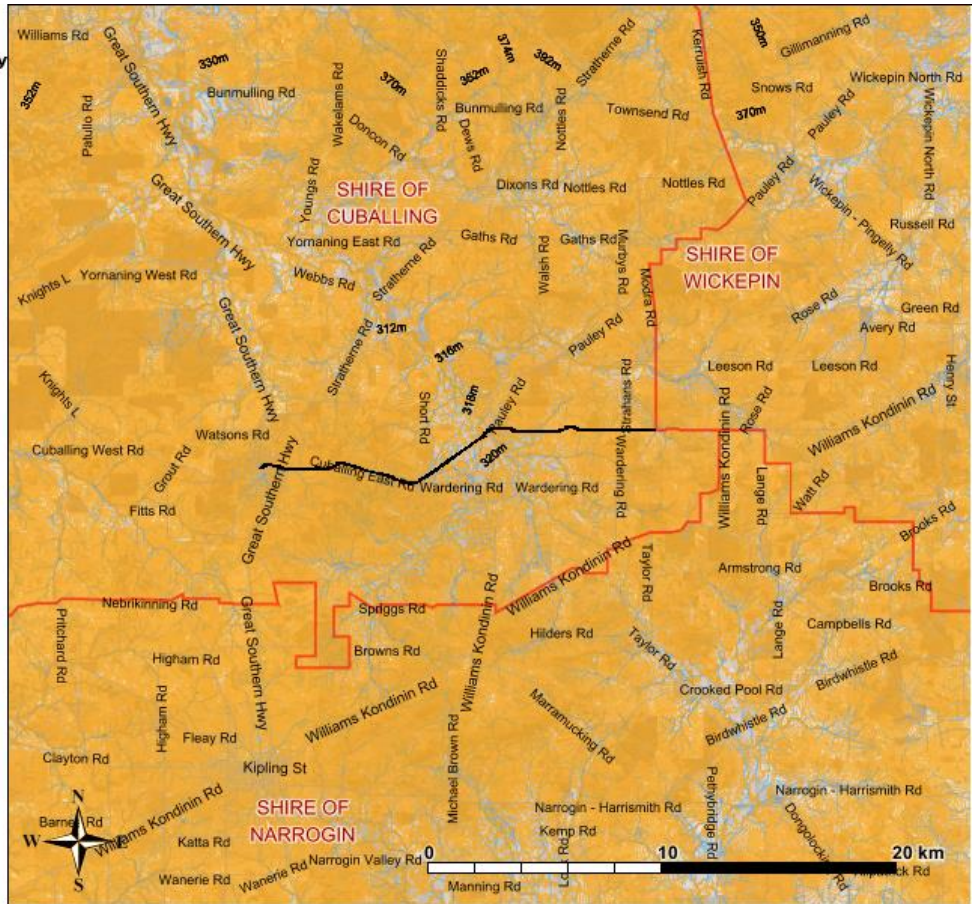

Distance and area calculations are performed using the following map projection: EPSG:28350

11.12	LHS	Wandoo	1	350	36	<p>Note - Two Strategies have been put in place to save these trees from being cleared. These are:</p> <p>a) Shift CL to RHS from existing CL by 1.0m from SLK 11.10 to 11.77 (CL Shift Tapers from SLK 10.98 to 11.10 at start and 11.77 to 11.89 at end) since there is no verge vegetation along this section on the RHS verge. However, 1.0m is the maximum possible shift since any additional shift will compromise the space for suitable table drain on the RHS verge.</p> <p>b) Reduce the Clearing Width from New CL from 16m to 15m to save larger "Potential Habitat" sized trees - where drainage can be installed around trees to be saved or the location of the trees to be saved poses no safety risk to motorists (ie is not located in run off areas).</p> <p>Pink dots have been painted on the trunks of these trees to save.</p> <p>These strategies, whilst instigated to save these trees listed will result in the following ongoing costs to the Shire of Cuballing:</p> <p>1) Will result in reduced sized table drains, which cannot be effectively and economically maintained of weeds and other vegetative growth by grader, and only by more expensive means with Excavator and Truck.</p> <p>2) Will result in reduced sized table drains, which will compromise the integrity of the pavement by running greater risk of wetter periods (which Cuballing is at high risk of) causing saturation of insitu soil, subsequently weakening it and resulting in pavement failure (and / or reduced pavement life) under heavy loading.</p>

Notes :

1 - LHS is Northern Verge and RHS is Southern Verge

2 - The verges from SLK 4.157 to 4.829 were checked for the existence of any native shrubs and or ground covers, and none were found. There is only some weeds growing us understory to the trees along this section (being Radish, Wild Oats, Deadly Nightshade) and some very small Jam Wattle regrowth suckers. The maintenance zone along the 18.1km section of the Cuballing East Rd is generally from 16 to 18m in width (8.0 to 9.0m from the existing centreline) and the Shire of Cuballing spray these verges each year to reduce the weed burden within this maintenance zone. There are large trees within the designated 16m clearing width within this section that will need to be removed to allow suitable table drains to be constructed and maintained into the future.

2 Assessment of clearing principles

2.1 Identified Potential Impacts Summary

Desktop assessment against clearing principles:

■ Likely to be at variance
 ■ May be at variance
 ■ Not likely to be at variance

Clearing Principle	Impact	Reason	Action Required
Principle (a) - High biodiversity	■	Principle (b) red impact. Principle (d) red impact. Principle (e) red impact.	
Principle (b) - Significant habitat for fauna	■	Specially Protected Fauna within 20km.	
Principle (c) - Habitat for rare flora	■	Declared Rare Flora within 20km.	Ground survey for vegetation condition and tree hollows in the application area may raise flag status.
Principle (d) - Habitat for TECs	■	Threatened Ecological Community (buffer) within application area.	
Principle (e) - Significant remnant in an extensively cleared area	■	Beard association less than 30% extent remaining within IBRA regions.	
Principle (f) - Growing in association with a watercourse or wetland	■	Application area is within 200m of a mapped natural hydrographic feature.	
Principle (g) - Likely to cause appreciable land degradation	■		
Principle (h) - Impacts to conservation area	■	Within or directly adjacent to DBCA Land for Wildlife.	
Principle (i) - Deterioration in the quality of surface or underground water	■	Application area > 5ha and: affects water dependent ecosystem (high potential or known). is within 200m of a mapped natural hydrographic feature.	

The following section lists the data used to inform the assessment against clearing principles. Further information might be available for your application site in specific project reports or site specific assessments that you might like to attach to this desktop assessment.

2.1 Principle (a) Native vegetation should not be cleared if it comprises a high level of biological diversity

Key to the Conservation Status:
 CR - Critically Endangered
 EN - Endangered
 VU - Vulnerable
 EX - Extinct

2.4 Principle (d) Native vegetation should not be cleared if it comprises the whole or a part or, or is necessary for the maintenance of, a threatened ecological community.

Threatened and Priority Ecological Communities

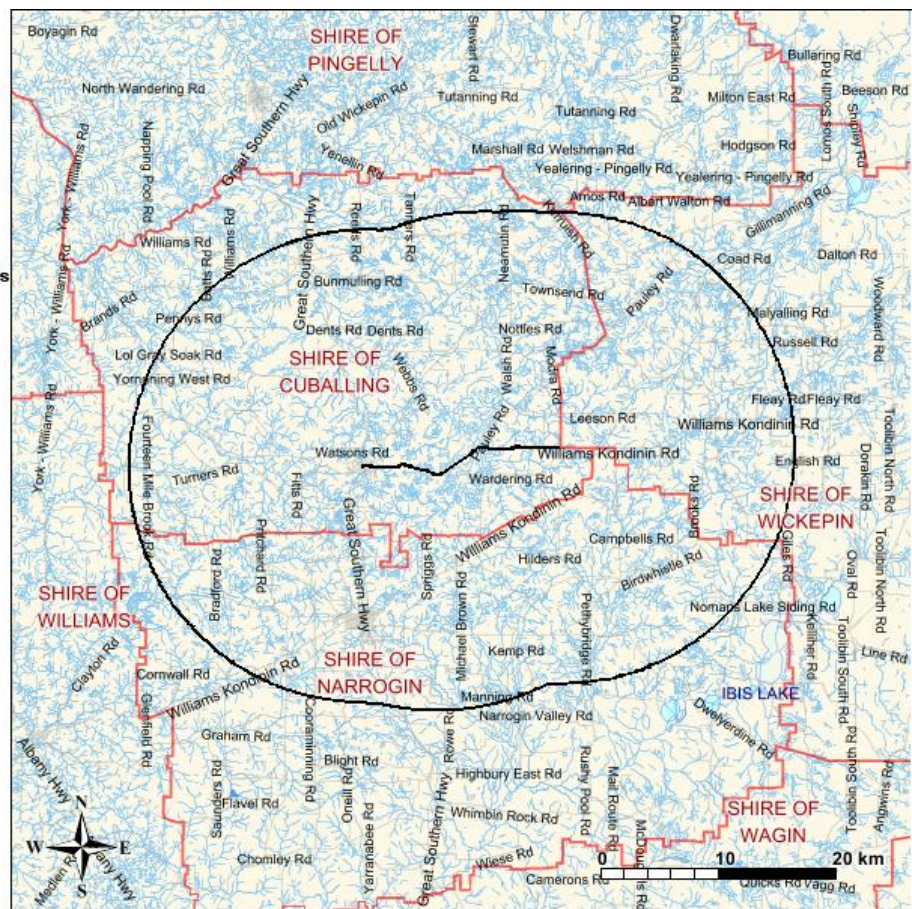

The following threatened ecological community records have been located within 20km of the application area (DBCA data reference **Ref: 26-0720EC**):

Due to the long list of individual records within the 20km radius of the road reserve, the list has been moved to the end of this document, see [Appendix 1](#).

2.6 Principle (f) Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.

2.8 Principle (h) Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
