

CPS 9406/1 - Supporting information - Flora, Vegetation and Fauna Survey

LOT 4 KING ROAD, OLDBURY

FLORA, VEGETATION AND FAUNA SURVEY

Prepared for: Aigle Royal

Report Date: 19 March 2021

Version: 1

Report No. 2021-573

PGV
ENVIRONMENTAL

The logo consists of the letters "PGV" in a large, bold, white sans-serif font. Below "PGV", the word "ENVIRONMENTAL" is written in a smaller, white, all-caps sans-serif font. The background of the logo is a stylized orange graphic that resembles a landscape or a series of overlapping curved bands.

1 INTRODUCTION

1.1 Background

Lot 4 King Road, Oldbury is located in the Shire of Serpentine-Jarrahdale approximately 33km south-south-east of the Perth Central Business District (Figure 1). The site is 14.25ha in size and is bounded by King Road and rural land to the west and an existing sand quarry to the south and rural land to the north and east (Figure 2).

The eastern half of the lot has previously been mined for sand. Some native vegetation remains around the old sand mine. PGV Environmental was commissioned by Aigle Royal to prepare a flora, vegetation and fauna survey to identify any potential constraints to clearing the remaining native vegetation.

1.2 Scope of Works

1.2.1 Flora and Vegetation

A Reconnaissance Flora and Vegetation Survey was undertaken in accordance with EPA Technical Guidance *Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA, 2016a). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Naturemap database and Threatened Ecological Communities database on National Map;
- A search of the Commonwealth Department of Agriculture, Water and the Environment (DAWE) Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act);
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field reconnaissance survey; and
- Description and mapping of vegetation types and vegetation condition.

1.2.2 Fauna

A Level 1 Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2016b). The survey included the following:

- A search of the DBCA Databases and NatureMap for the general area for Threatened and Priority Species;
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the Environment Protection and Biodiversity Conservation (EPBC) Act 1999 or international migratory bird agreements (JAMBA/CAMBA);
- A review of studies previously undertaken in the vicinity of the site;
- A description of the fauna habitats present on the site from field surveys; and

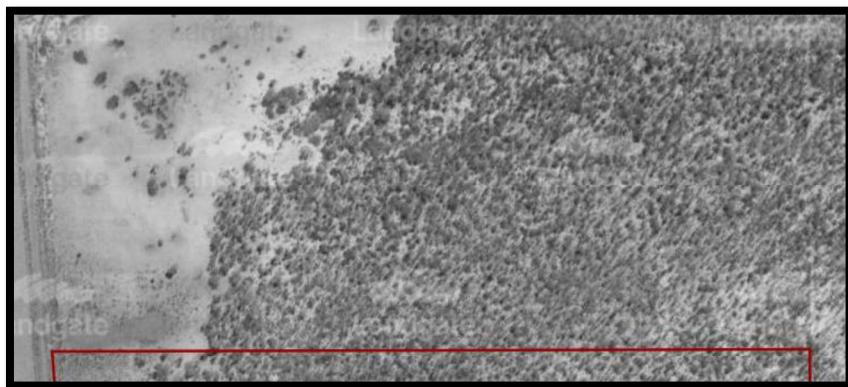

- An assessment of the significance of the site for conservation significant species in a local and regional context.

2 EXISTING ENVIRONMENT

2.1 Land Use

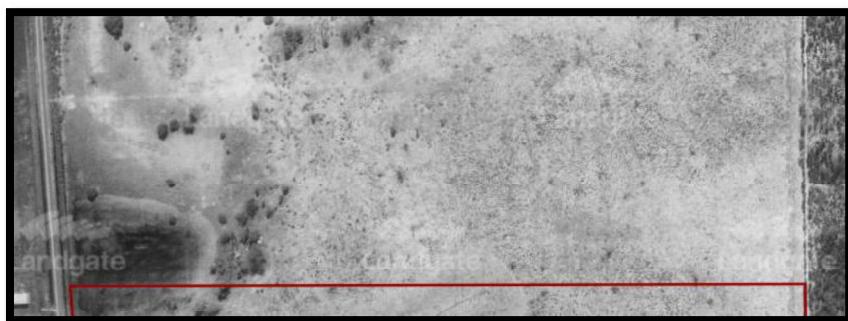

The earliest available historic aerial photograph on-line from 1953 shows that the site is largely vegetated to the east and cleared in the west (Plate 1) (Landgate, 2021).

Plate 1: Aerial Photograph 1953 (Landgate, 2021)

The aerial photograph from 1974 shows the site has been extensively cleared (Plate 2) (Landgate, 2021). A wetland is apparent in the south-west corner of the lot.

Plate 2: Aerial Photograph 1974 (Landgate, 2021)

The aerial photograph from 1985 shows the vegetation has regrown from the past clearing and sand mining has started in the eastern end of the site (Plate 3).

Plate 3: Aerial Photograph 1985 (Landgate, 2021)

Sand mining continued progressively over the next few years and the limit of the mining operation was reached in 2008 (Plate 4). The footprint of the mining operations extended into Lot 5 to the north of the site.

Plate 4: Aerial Photograph 2008 (Landgate, 2021)

The site is zoned 'Rural' under the Metropolitan Region Scheme (MRS) and the Shire of Serpentine-Jarrahdale Local Planning Scheme No. 2 (WAPC, 1989).

2.2 Topography

The site is flat at the western end at around 21m Australian Height Datum (AHD). The topography of the eastern two-thirds has been significantly altered due to the mining activity. The area previously mined is flat at around 22m AHD. The excavated area batters up to the natural surface level to the west (25m AHD) and east (29m AHD) (Figure 2).

2.3 Geology and Soils

2.3.1 Geology

The site is mapped as part of the Bassendean System, the oldest of the three dune systems on the Swan Coastal Plain (Bolland, 1998). The Bassendean System consists of very low relief, leached, grey siliceous Pleistocene sand dunes, intervening sandy and clayey swamps and gently undulating plains. These occur immediately west of, and partly overlie, the Pinjarra Plain. These soils are very leached, infertile and mildly acidic (DPIRD, 2020).

2.3.2 Soils

The soils on the site have been described by the Department of Primary Industry and Regional Development (DPIRD) as:

- Bassendean B1 Phase (212Bs_B1) mapped on it which are extremely low to very low relief dunes, undulating sandplain and discrete sand rises with deep bleached grey sands sometimes with a pale yellow B horizon or a weak iron-organic hardpan at depths generally greater than 2 m (DPIRD, 2020). These soils occur in the eastern part of the site; and
- Bassendean B6 Phase (212Bs_B6) which is described as sandplain and broad extremely low rises with imperfectly drained deep or very deep grey siliceous sands (DPIRD, 2020). These soils occur on the western part of the site.

2.4 Hydrology

Groundwater is at approximately 19 to 20m AHD and is 1 to 9m below the surface level, and generally flows to the south-east (DWER, 2021).

The western part of the site contains a small area of a large Multiple Use Wetland (Unique Feature Identifier 14704) that extends for 277ha over a wide area to the west and north-west of the site. The MU wetland is shown on Plate 5 as the blue area. The wetland is classified as Dampland although the extent of the wetland indicates to PGV Environmental that it should more accurately be classified as a Palusplain wetland.

Plate 5: Multiple Use Wetland Mapped on the Site

3 FLORA AND VEGETATION SURVEY

3.1 Methodology

3.1.1 Database Searches

Searches of the following databases were undertaken for a 10km radius around the central point of the site prior to the site survey:

- Department of Biodiversity, Conservation and Attractions (DBCA) Declared Rare and Priority Flora database and Threatened Ecological Communities database (Appendix 1) which is a database of recorded occurrences;
- DBCA Naturemap Database (DBCA, 2020) (Appendix 2) which is a database of recorded occurrences; and
- The Commonwealth Government's Protected Matters Search Tool which identifies species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation* (EPBC) Act 1999 (DAWE, 2020). A radius of 5km was used for this database (Appendix 3).

3.1.2 Site Survey

A site reconnaissance survey was conducted by Dr Paul van der Moezel from PGV Environmental on 3 March 2021. The survey included walking through the survey areas to record vegetation types and vegetation condition. A provisional species list was also recorded.

3.2 Results

3.2.1 Flora Database Searches

The search of the DBCA Threatened Flora Databases: the WA Herbarium database (WAHerb), the Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 1) and Naturemap (Appendix 2) indicates that a number of species that are listed as Endangered, Threatened or Priority have been recorded within a 10km radius of the site. The EPBC Act Protected Matters Search Tool (Appendix 3) identifies species listed under the EPBC Act as potentially having habitat in the area. The results from these database searches are shown in Table 1. None of the species has been recorded from the survey area.

Table 1: Conservation Significant Flora Identified in Database Searches

| Scientific Name | Common Name | Conservation Status (WA) | Status under EPBC Act |
|-------------------------------|--|--------------------------|-----------------------|
| <i>Caladenia huegelii</i> | King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid | Schedule 1 | Endangered |
| <i>Calectasia cyanea</i> | Blue Tinsel Lily | Schedule 1 | Critically Endangered |
| <i>Drakaea elastica</i> | Glossy-leaved Hammer Orchid | Schedule 1 | Endangered |
| <i>Eucalyptus x balanites</i> | Cadda Road Mallee | Schedule 1 | Endangered |

| Scientific Name | Common Name | Conservation Status (WA) | Status under EPBC Act |
|---|------------------------------|--------------------------|-----------------------|
| <i>Synaphea</i> sp. Fairbridge Farm (D Papenfus 696) | Selena's Synaphea | Schedule 1 | Critically Endangered |
| <i>Synaphea</i> sp. Serpentine (G.R Brand 103) | | Schedule 1 | Critically Endangered |
| <i>Diuris purdiei</i> | Purdie's Donkey-orchid | Schedule 2 | Endangered |
| <i>Drakaea micrantha</i> | Dwarf Hammer-orchid | Schedule 2 | Vulnerable |
| <i>Grevillea curviloba</i> subsp. <i>incurva</i> | Narrow curved-leaf Grevillea | Schedule 2 | Endangered |
| <i>Lepidosperma rostratum</i> | Beaked Lepidosperma | Schedule 2 | Endangered |
| <i>Synaphea</i> sp. Pinjarra Plain (A.S George 17182) | | Schedule 2 | Endangered |
| <i>Thelymitra stellata</i> | Star Sun-orchid | Schedule 2 | Endangered |
| <i>Andersonia gracilis</i> | Slender Andersonia | Schedule 3 | Endangered |
| <i>Diuris micrantha</i> | Dwarf Bee-orchid | Schedule 3 | Vulnerable |
| <i>Tetraria australiensis</i> | Southern Tetraria | Schedule 3 | Vulnerable |
| <i>Acacia lasiocarpa</i> var. <i>bracteolata</i> long peduncle variant (G.J. Keighery 5026) | | Priority 1 | |
| <i>Boronia juncea</i> subsp. <i>juncea</i> | | Priority 1 | |
| <i>Amanita wadulawitu</i> | Long-spored Lepidella | Priority 2 | |
| <i>Calectasia grandiflora</i> | Blue Tinsel Lily | Priority 2 | |
| <i>Johnsonia pubescens</i> subsp. <i>cygnorum</i> | | Priority 2 | |
| <i>Levenhookia pulcherrima</i> | Beautiful Stylewort | Priority 2 | |
| <i>Poranthera moorokatta</i> | | Priority 2 | |
| <i>Tetraria</i> sp. Chandala (G.J. Keighery 17055) | | Priority 2 | |
| <i>Amanita fibrillobes</i> | Peach Amanita | Priority 3 | |
| <i>Amanita preissii</i> | Cinnamon-ring Lepidella | Priority 3 | |
| <i>Amanita wadjukiorum</i> | Wadjuk Lepidella | Priority 3 | |
| <i>Angianthus drummondii</i> | | Priority 3 | |
| <i>Babingtonia urbana</i> | Coastal Plain Babingtonia | Priority 3 | |
| <i>Cyathochaeta teretifolia</i> | | Priority 3 | |
| <i>Dillwynia dillwynioides</i> | | Priority 3 | |
| <i>Eryngium pinnatifidum</i> subsp. <i>Palustre</i> (G.J. Keighery 13459) | | Priority 3 | |
| <i>Jacksonia gracillima</i> | | Priority 3 | |
| <i>Meionectes tenuifolia</i> | | Priority 3 | |
| <i>Pithocarpa corymbulosa</i> | | Priority 3 | |

| Scientific Name | Common Name | Conservation Status (WA) | Status under EPBC Act |
|--|-------------------------|--------------------------|-----------------------|
| <i>Schoenus capillifolius</i> | | Priority 3 | |
| <i>Schoenus pennisetis</i> | | Priority 3 | |
| <i>Schoenus</i> sp. Waroona (G.J. Keighery 12235) | | Priority 3 | |
| <i>Stylium aceratum</i> | | Priority 3 | |
| <i>Stylium paludicola</i> | | Priority 3 | |
| <i>Aponogeton hexatepalus</i> | Stalked Water Ribbons | Priority 4 | |
| <i>Dodonaea hackettiana</i> | Hackett's Hopbush | Priority 4 | |
| <i>Drosera occidentalis</i> | Western Sundew | Priority 4 | |
| <i>Stylium ireneae</i> | | Priority 4 | |
| <i>Stylium longitubum</i> | Jumping Jacks | Priority 4 | |
| <i>Stylium striatum</i> | Fan-leaved Triggerplant | Priority 4 | |
| <i>Verticordia lindleyi</i> subsp. <i>lindleyi</i> | | Priority 4 | |

Conservation Codes are shown in Appendix 4

3.2.2 TEC and PEC Database Searches

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database was conducted within a radius of 5km around the site (15-0321EC) (Appendix 5). Ten TECs and seven PECs at State level were identified in the database search. There are five State listed PECs are listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) as TECs. The communities identified in the database searches are outlined in Table 2.

Table 2: Threatened and Priority Ecological Communities likely to occur within 5km of the Site

| Ecological Community | Description | Conservation Status WA | Status under the EPBC Act |
|----------------------|--|------------------------|------------------------------------|
| Mound Springs SCP | Communities of Tumulus Springs (Organic Mound Springs, Swan Coastal Plain) | Critically Endangered | Endangered |
| SCP3a | <i>Corymbia calophylla</i> - <i>Kingia australis</i> woodlands on heavy soils, Swan Coastal Plain (floristic community type 3a as originally described in Gibson et al. (1994)) | Critically Endangered | Endangered as part of Claypans TEC |
| SCP3c | <i>Corymbia calophylla</i> - <i>Xanthorrhoea preissii</i> woodlands and shrublands, Swan Coastal Plain (floristic community type 3c as originally described in Gibson et al. (1994)) | Critically Endangered | Endangered as part of Claypans TEC |
| SCP19b | Woodlands over sedgelands in Holocene dune swales of the southern Swan Coastal Plain (original description; Gibson et al. (1994)). | Critically Endangered | Endangered |

| Ecological Community | Description | Conservation Status WA | Status under the EPBC Act |
|------------------------------------|---|-------------------------------|--|
| SCP02 | Southern wet shrublands, Swan Coastal Plain (floristic community type 2 as originally described in Gibson et al. (1994)) | Endangered | |
| SCP10a | Shrublands on dry clay flats (floristic community type 10a as originally described in Gibson et al. (1994)) | Endangered | Critically Endangered as Claypans TEC |
| SCP20b | Banksia attenuata and/or Eucalyptus marginata woodlands of the eastern side of the Swan Coastal Plain (floristic community type 20b as originally described in Gibson et al. (1994)) | Endangered | Endangered as part of the Banksia WL SCP |
| SCP26a | <i>Melaleuca huegelii</i> - <i>Melaleuca systena</i> shrublands on limestone ridges (floristic community type 26a as originally described in Gibson et al. (1994)) | Endangered | |
| SCP3b | Corymbia calophylla - Eucalyptus marginata woodlands on sandy clay soils of the southern Swan Coastal Plain (floristic community type 3b as originally described in Gibson et al. (1994)) | Vulnerable | |
| SCP08 | Herb rich shrublands in clay pans (floristic community type 8 as originally described in Gibson et al. (1994)) | Vulnerable | Critically Endangered |
| SCP09 | Dense shrublands on clay flats (floristic community type 9 as originally described in Gibson et al. (1994)) | Vulnerable | Critically Endangered |
| <i>Casuarina obesa</i> association | <i>Casuarina obesa</i> Association | Priority 1 | |
| SCP1a | Eucalyptus haematoxylon - E. marginata woodlands on Whicher foothills | Priority 3 | |
| SCP21c | Low lying <i>Banksia attenuata</i> woodlands or shrublands | Priority 3 | Endangered as part of the Banksia WL SCP |
| SCP22 | <i>Banksia ilicifolia</i> woodlands | Priority 3 | Endangered as part of the Banksia WL SCP |
| SCP25 | Southern <i>Eucalyptus gomphocephala</i> - <i>Agonis flexuosa</i> woodlands | Priority 3 | Critically Endangered as part of Tuart Woodlands |

| Ecological Community | Description | Conservation Status WA | Status under the EPBC Act |
|-----------------------------|---|-------------------------------|----------------------------------|
| Banksia WL SCP | Banksia Dominated Woodlands of the Swan Coastal Plain IBRA Region | Priority 3 | Endangered |
| Tuart woodlands | Tuart (<i>Eucalyptus gomphocephala</i>) woodlands and forests of the Swan Coastal Plain | Priority 3 | Critically Endangered |

3.2.3 Vegetation Complex

Vegetation Complexes are a broad level of vegetation description which is based on the underlying geomorphology and rainfall (Heddle *et al.*, 1980). The vegetation over most of the site is part of the Bassendean Complex – Central and South which is described as:

Bassendean Complex-Central and South - Vegetation ranges from woodland of Jarrah (*Eucalyptus marginata*) – Sheoak (*Allocasuarina fraseriana*) – Banksia (*Banksia spp.*) to low woodland of Paperbark (*Melaleuca spp.*), and sedgelands on moister sites (Heddle *et al.*, 1980).

3.3 Vegetation

3.3.1 Vegetation Type

Vegetation complexes are a very broad mapping unit used to map the vegetation at the scale of the Swan Coastal Plain for example. For small scale sites, such as the survey area, vegetation mapping can be further refined by using vegetation types which are based on the composition and structure of the dominant species rather than based on geomorphology.

Four native vegetation types were described and mapped on the site. The vegetation types are described in Table 3 and mapped in Figure 3.

Table 5: Vegetation Types on the Site

| Vegetation Type | Description | Photograph |
|--|--|--|
| BaBm <i>Banksia attenuata/B. menziesii/Kunzea glabrescens</i> Low Open Woodland over <i>Adenanthes cygnorum</i> Tall Open Scrub over <i>Scholtzia involucrata</i> Open low Heath | <p>This vegetation type represents the uncleared areas on the eastern upland areas of the site that were not cleared for sand mining. The main area along the eastern boundary with a smaller, degraded section north-west of the old sand mine. <i>Banksia attenuata</i> and <i>B. menziesii</i> are common but not dense and are up to 4m high with native Spearwood (<i>Kunzea glabrescens</i>) abundant to 4m high. Woolly Bush (<i>Adenanthes cygnorum</i>) is common to 4m and the understorey is a mix of native species (<i>Scholtzia involucrata</i>, <i>Lyginia barbata</i>, <i>Patersonia occidentalis</i>, <i>Corynotheca micrantha</i>) and introduced grasses such as Perennial Veldtgrass (<i>Ehrharta calycina</i>) and Blowfly Grass (<i>Briza maxima</i>).</p> |  |
| Kg <i>Kunzea glabrescens</i> Tall Shrubland to Closed Tall Scrub | <p>The batter slopes of the old sand mine contain <i>Kunzea glabrescens</i> to 3m tall with <i>Jacksonia furcellata</i> and <i>Adenanthes cygnorum</i> also common. No Banksia trees occur in this vegetation type. Understorey commonly contains <i>Styphelia xerophylla</i> and <i>Lyginia barbata</i>.</p> |  |

| Vegetation Type | Description | Photograph |
|--|---|--|
| Ac Rehab <i>Adenanthos cygnorum</i> Tall Shrubland | <p>This vegetation type occurs on the old sand mine which has regenerated naturally and had some active revegetation. The vegetation consists of tall sparse Woolly Bush (<i>Adenanthos cygnorum</i>) shrubs with <i>Jacksonia sternbergiana</i> and <i>Kunzea glabrescens</i> also common taller shrubs. Very little ground cover is present but does include some native <i>Scholtzia involucrata</i> and some introduced Lovegrass (<i>Eragrostis curvula</i>) and Perennial Veldtgrass.</p> |  |
| Er <i>Eucalyptus rudis</i> Open Woodland | <p>Several <i>Eucalyptus rudis</i> (Flooded Gum) trees and scattered few Paperbark (<i>Melaleuca rhaphiophylla</i>) trees occur on low-lying ground to the west of the sand quarry. The understorey is all grassy weed species.</p> |  |

3.3.2 Vegetation Condition

The condition of the vegetation was assessed according to the system of Keighery as described in Bush Forever (Government of Western Australia, 2000) (Table 4).

Table 4: Vegetation Condition Rating Scale

| Condition | Description |
|---------------------|--|
| Pristine | Pristine or nearly so, no obvious signs of disturbance. |
| Excellent | Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species. |
| Very Good | Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing. |
| Good | Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate to it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing. |
| Degraded | Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing. |
| Completely Degraded | The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as ‘parkland cleared’ with the flora comprising weed or crop species with isolated native trees or shrubs. |

The condition of the vegetation was mostly rated as Degraded to Completely Degraded due to the past clearing and sand mining. An area of Banksia woodland in the eastern end of the site was rated as Good due to the presence of native understorey species with the weed species.

3.3.3 Floristic Community Type

The Reconnaissance survey does not allow a detailed assessment of Floristic Community Types (FCTs) as that requires spring quadrat data to analyse. PGV Environmental considers all the areas in Degraded to Completely Degraded condition would not meet any of the defined FCTs

3.3.4 Threatened and Priority Ecological Community Assessment.

None of the vegetation in Degraded to Completely Degraded condition is able to be assessed as a FCT. Therefore, none of those vegetation types is considered a Threatened Ecological Community (TEC) or Priority Ecological Community (PEC).

The small area of Banksia woodland in Good condition at the eastern end is most likely to be FCT 23a ‘Central *Banksia attenuata* – *B. menziesii* woodlands’. FCT 23a is not a TEC or PEC. However, FCT 23a is part of a broader ecological community called the Banksia Woodlands of the Swan Coastal Plain which is listed as a PEC at State level and TEC under the Commonwealth EPBC Act. An assessment of the Banksia woodland on the site follows with respect to the Banksia Woodland TEC.

The assessment considers the area of Banksia woodland at the eastern end of the site as well as the smaller area to the north-west of the old sand mine. Also to consider in the assessment is the presence of Banksia woodland vegetation on Lot 5 to the north.

The *Approved Conservation Advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community* (Commonwealth of Australia, 2016) (Conservation Advice) describes the Banksia Woodland TEC as:

The ecological community is a woodland associated with the Swan Coastal Plain of southwest Western Australia. A key diagnostic feature is a prominent tree layer of Banksia, with scattered eucalypts and other tree species often present among or emerging above the Banksia canopy. The understorey is a species rich mix of sclerophyllous shrubs, graminoids and forbs. The ecological community is characterised by a high endemism and considerable localised variation in species composition across its range (Commonwealth of Australia, 2016).

Table 6 assesses the vegetation type on the site against the Banksia Woodland TEC criteria contained in the Conservation Advice.

In summary, the eastern area of *Banksia attenuata/B. menziesii/Kunzea glabrescens* Low Open Woodland is around 1.05ha but is part of a 'patch' of Banksia vegetation that is continuous on Lot 5 to the north and totals around 5.7ha. The combined patch meets the requirements to be the Banksia Woodlands of the Swan Coastal Plain TEC.

The small area containing Banksia trees in the north-west of the old sand mine is too small (0.309ha) and degraded, and not connected to any nearby Banksia vegetation, and is not considered the Banksia Woodland TEC.

Table 6: Assessment of the Banksia Woodland of the Swan Coastal Plain TEC.

| Feature | Characteristic | Vegetation Type | |
|----------------------|--|--|---|
| | | BaBm ¹ | BaBm ² |
| Banksia Species | The patch must include at least one of the following diagnostic species: <ul style="list-style-type: none"> • <i>Banksia attenuata</i> (Candlestick Banksia) • <i>Banksia menziesii</i> (Firewood Banksia) • <i>Banksia prionotes</i> (Acorn Banksia) • <i>Banksia ilicifolia</i> (Holly-Leaved Banksia). | <i>Banksia attenuata</i> and <i>B. menziesii</i> common. | <i>Banksia attenuata</i> and <i>B. menziesii</i> present. |
| Vegetation Structure | <ul style="list-style-type: none"> • A distinctive upper sclerophyllous layer of low trees (occasionally large shrubs more than 2 m tall), typically dominated or codominated³ by one or more of the <i>Banksia</i> species (<i>B. attenuata</i>, <i>B. menziesii</i>, <i>B. ilicifolia</i>, <i>B. prionotes</i>); • An emergent tree layer of medium or tall (>10 m) height <i>Eucalyptus</i> or <i>Allocasuarina</i> (Sheoak) species may sometimes be present above the <i>Banksia</i> canopy. • An understory that is often highly species-rich consists of: <ul style="list-style-type: none"> - A layer of sclerophyllous shrubs of various heights; and, - A herbaceous ground layer of cord rushes, sedges and perennial and ephemeral forbs, that sometimes includes grasses. The development of a ground layer may vary depending on the density of the shrub layer and disturbance history. | <ul style="list-style-type: none"> • Banksia trees form a distinctive upper layer of low trees with native Spearwood (<i>Kunzea glabrescens</i>). • No emergent trees. • Understorey in Good condition with a moderate diversity of native species including shrubs, sedges and ephemerals. | <ul style="list-style-type: none"> • Banksia trees are sparse and do not form a distinctive upper layer of trees. • No emergent trees. • Understorey mostly weeds with some native shrubs, sedges and ephemeral species. |
| Vegetation Condition | An area of Banksia woodland needs to be at least in Good condition to be considered the TEC. | Overall condition is Good. Some areas have a Degraded to Completely Degraded understorey with few native species and others have a higher density of native species and could be rated as Very Good. | Overall condition is Degraded. |
| Patch Size | The Banksia woodland TEC needs to meet a minimum ‘patch’ size depending on its condition to qualify as the TEC, as follows: <ul style="list-style-type: none"> • ‘Pristine’ – no minimum patch size • ‘Excellent’ – 0.5ha • ‘Very Good’ – 1ha • ‘Good’ – 2ha | Eastern area of Banksia woodland on Lot 4 is around 1.05 ha. Continuous with Banksia woodland on Lot 5 to the north. Total area of Banksia patch is around 5.7ha. The eastern area needs to be considered as one ‘patch’ with the Banksia on the lot to the north. Overall condition of Good or better of the patch is well above the 2ha minimum requirement to be the TEC | North-west area of Banksia woodland is around 0.25ha. Not connected to Banksia woodland on adjoining lot. Size not relevant since the condition is Degraded. If rated as Good then the size is under the 2ha minimum requirement to be the TEC. |
| Conclusion | | Meets all the required criteria when considered together with the Banksia vegetation on Lot 5 to the north. | Does not meet all the required criteria to be the TEC. |

3.4 Flora

A total of 53 plant species were recorded during the 2021 Reconnaissance flora survey (Appendix 6). This total consisted of 42 native and 11 introduced species. As the survey was only a Reconnaissance survey, a more detailed survey in spring would record many more introduced species, particularly in the western cleared paddock. A spring survey of the areas of native vegetation in Good condition or better would result in more ephemeral species being recorded.

Based on the soil types and vegetation type and condition observed during the reconnaissance survey the likelihood of conservation significant species identified in the database searches occurring on the site has been examined (Table 6).

Table 6: Likelihood of Identified Significant Flora Species Occurring on the Site

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|---|--|--|---|
| Threatened Species | | | |
| <i>Caladenia huegelii</i> | King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid | The Grand Spider-orchid prefers deep grey-white sand usually associated with the Bassendean sand-dune system, however, rare plants have been known to extend into the Spearwood system (in which calcareous yellow sands dominate) in some areas (DEC, 2009a). This species generally does not survive in disturbed areas. | Unlikely due to previous clearing |
| <i>Calectasia cyanea</i> | Blue Tinsel Lily | The Blue Tinsel Lily prefers white, grey or yellow sand or gravel. This species is restricted to Torndirrup National Park and Albany region of the South West Botanical Province (Barrett and Dixon, 2001). | No – this record was prior to the species being defined by its location |
| <i>Drakaea elastica</i> | Glossy-leaved Hammer Orchid | The Glossy-leaved Hammer Orchid prefers low-lying situations adjoining winter-wet swamps. This species does not survive in disturbed areas (DEC, 2009b). | Highly Unlikely as no intact vegetation on winter-wet swamps occur |
| <i>Eucalyptus x balanites</i> | Cadda Road Mallee | The Cadda Road Mallee prefers sandy soils with lateritic gravel. | Highly Unlikely – not lateritic habitat |
| <i>Synaphea</i> sp. Fairbridge Farm (D Papenfus 696) | Selena's Synaphea | Selena's Synaphea occurs in sandy soils with lateritic pebbles near winter-wet flats, in low woodland with weedy grasses. | Highly Unlikely – not lateritic habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|------------------------------------|--|---|
| <i>Synaphea</i> sp. Serpentine (G.R Brand 103) | | <i>Synaphea</i> sp. Serpentine occurs in greybrown sandy loams or clay in seasonally wet areas (DPaW, 2017). | Highly Unlikely – not suitable habitat |
| <i>Diuris purdiei</i> | Purdie's Donkey-orchid | Purdie's Donkey Orchid occurs in grey-black sand in moist winter-wet swamps. | Highly Unlikely – not suitable habitat |
| <i>Drakaea micrantha</i> | Dwarf Hammer- orchid | Dwarf Hammer-orchid occurs in grey sands over dark, grey to blackish, sandy clay-loam substrates in winter wet depressions or swamps. | Highly Unlikely – not suitable habitat |
| <i>Grevillea curviloba</i> subsp. <i>incurva</i> | Narrow curved-leaf Grevillea | Narrow curved-leaf Grevillea prefers sand, sandy loam in winter-wet heath. | Highly Unlikely – not peaty or clay habitat |
| <i>Lepidosperma rostratum</i> | Beaked Lepidosperma | Beaked Lepidosperma is found in peaty sand, clay. | Highly Unlikely – not suitable habitat |
| <i>Synaphea</i> sp. Pinjarra Plain (A.S George 17182) | | <i>Synaphea</i> sp. Pinjarra Plain occurs in grey sandy loam or clay, grey-brown clayey sand, brown clayey loam, laterite on flats, seasonally wet areas, railroad reserves often with wet depressions or drains. | Highly Unlikely due to absence of appropriate soil types and intact vegetation on wet areas |
| <i>Thelymitra stellata</i> | Star Sun- orchid | The Star Sun-orchid prefers sand, gravel or lateritic loam. | No – not suitable habitat |
| <i>Andersonia gracilis</i> | Slender Andersonia | Slender Andersonia occurs in white/grey sand, sandy clay, gravelly loam in winter-wet areas, near swamps. | Highly Unlikely due to absence of intact vegetation in winter-wet areas |
| <i>Diuris micrantha</i> | Dwarf Bee- orchid | The Dwarf Bee-orchid is usually found on cleared firebreaks or open sandy patches that have been disturbed with in Jarrah Banksia woodland or thickets of Spearwood (<i>Kunzea ericifolia/ glabrescens</i>) (Williams et al., 2001). | No – not suitable habitat |
| <i>Tetraria australiensis</i> | Southern Tetraria | Southern Tetraria occurs in grey sand over clay; also described as yellow and sandy or clayey lateritic soils favouring winter-wet swampy depressions, drainage lines or rises surrounding swamps. | Highly Unlikely – not suitable habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|-----------------------|--|--|
| Priority 1 Species | | | |
| <i>Acacia lasiocarpa</i> var. bracteolata long peduncle variant (G.J. Keighery 5026) | | This variant of <i>Acacia lasiocarpa</i> occurs in grey or black sand over clay in swampy areas, winter wet lowlands. | Highly Unlikely – not clayey habitat |
| <i>Boronia juncea</i> subsp. <i>juncea</i> | | <i>Boronia juncea</i> subsp. <i>juncea</i> occurs in sand in low scrub | Highly Unlikely – upland too degraded |
| Priority 2 Species | | | |
| <i>Amanita wadulawitu</i> | Long-spored Lepidella | Long-spored Lepidella occurs in sandy soil with <i>Corymbia calophylla</i> , <i>Eucalyptus marginata</i> , <i>E. todiana</i> , <i>E. camaldulensis</i> , <i>Jacksonia furcellata</i> , <i>Banksia attenuata</i> and <i>B. menziesii</i> . (McGurk et al., 2016). | Possible |
| <i>Calectasia grandiflora</i> | Blue Tinsel Lily | Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges. | Highly Unlikely – not calcareous soils |
| <i>Johnsonia pubescens</i> subsp. <i>cygnorum</i> | | <i>Johnsonia pubescens</i> subsp. <i>cygnorum</i> occurs on grey-white-yellow sand on flats on seasonally-wet sites | Unlikely – to degraded uplands |
| <i>Levenhookia pulcherrima</i> | Beautiful Stylewort | Beautiful Stylewort grows in sand. | Highly Unlikely – not suitable habitat |
| <i>Poranthera moorokatta</i> | | <i>Poranthera moorokatta</i> grows in white silica sand and has been recorded in Banksia woodland and in a shallow dampland (Barrett, 2012). | Possible |
| <i>Tetraria</i> sp. Chandala (G.J. Keighery 17055) | | <i>Tetraria</i> sp. Chandala is recorded from a mound spring in peaty sand (Western Australian Herbarium, 2005). | No – no mound spring on the site |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|---------------------------|--|---|
| Priority 3 Species | | | |
| <i>Amanita fibrillopes</i> | Peach Amanita | Peach Amanita is recorded from sandy or gravelly soil in dry sclerophyll forest and Banksia woodland, or in humus rich soil in seasonally wet eucalypt and paperbark woodland, often associated with <i>Eucalyptus marginata</i> , <i>E. jacksonii</i> , <i>Allocasuarina fraseriana</i> , <i>Corymbia calophylla</i> , <i>Melaleuca preissiana</i> and <i>Agonis</i> sp. (Davison et al., 2013). | Unlikely – not suitable habitat |
| <i>Amanita preissii</i> | Cinnamon-ring Lepidella | Cinnamon-ring Lepidella is found under shrubs and Eucalyptus in West Australia (Amanitaceae Org, 2015) in sandy soil and lateritic gravel, associated with <i>Allocasuarina fraseriana</i> , <i>Acacia pulchella</i> , <i>Corymbia calophylla</i> , <i>Callitris</i> sp., <i>Eucalyptus gomphocephala</i> , <i>E. marginata</i> , <i>Macrozamia fraseri</i> and <i>Pinus pinaster</i> (Davidson et al., 2017). | Highly Unlikely – not suitable habitat |
| <i>Amanita wadjukiorum</i> | Wadjuk Lepidella | Wadjuk Lepidella is solitary to gregarious, in sandy soil in degraded native vegetation with <i>Allocasuarina fraseriana</i> , <i>Corymbia calophylla</i> , <i>C. citriodora</i> and <i>Brachychiton</i> sp (Davidson et al., 2013). | Highly Unlikely – not suitable habitat |
| <i>Angianthus drummondii</i> | | <i>Angianthus drummondii</i> grows in grey or brown clay soils, ironstone on seasonally wet flats. | Highly Unlikely – not suitable habitat |
| <i>Babingtonia urbana</i> | Coastal Plain Babingtonia | Coastal Plain Babingtonia occurs in orange sand, brown loam, white sandy clay on low flats, winter-wet swamps | Highly Unlikely – not suitable habitat |
| <i>Cyathochaeta teretifolia</i> | | <i>Cyathochaeta teretifolia</i> occurs in grey sand, sandy clay on swamps, creek edges. | Highly Unlikely – not clay soils |
| <i>Dillwynia dillwynioides</i> | | <i>Dillwynia dillwynioides</i> occurs in sandy soils in winter-wet depressions. | Unlikely – no intact vegetation in winter wet areas |
| <i>Eryngium pinnatifidum</i> subsp. Palustre (G.J. Keighery 13459) | | <i>Eryngium pinnatifidum</i> subsp. Palustre is recorded from a winter wet claypan, water to 20 cm deep in grey-brown clay (Western Australian Herbarium, 1989) | Unlikely – no intact vegetation in winter wet areas |
| <i>Jacksonia gracillima</i> | | <i>Jacksonia gracillima</i> occurs in grey and brown well-drained sand. | Possible |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|---|-----------------------|---|--|
| <i>Meionectes tenuifolia</i> | | <i>Meionectes tenuifolia</i> occurs on swamp margins on seasonally wet poorly drained flats or granite flats in shallow soils. | Highly Unlikely – the soils are not peaty |
| <i>Pithocarpa corymbulosa</i> | | <i>Pithocarpa corymbulosa</i> occurs in gravelly or sandy loam amongst granite outcrops. | Unlikely – not swamp habitat |
| <i>Schoenus capillifolius</i> | | <i>Schoenus capillifolius</i> grows in brown mud on claypans. | Highly Unlikely – no intact vegetation on claypans |
| <i>Schoenus pennisetis</i> | | <i>Schoenus pennisetis</i> occurs in grey or peaty sand, sandy clay in swamps, winter-wet depressions. | Highly Unlikely – no intact vegetation in winter wet depressions |
| <i>Schoenus</i> sp. Waroona (G.J. Keighery 12235) | | <i>Schoenus</i> sp. Waroona occurs in clay or sandy clay on winter-wet flats. | Unlikely – no intact vegetation in winter wet depressions |
| <i>Stylidium aceratum</i> | | <i>Stylidium aceratum</i> occurs in sandy soils in swamp heathland. | Unlikely – not suitable habitat |
| <i>Stylidium paludicola</i> | | <i>Stylidium paludicola</i> prefers peaty sand over clay in winter wet habitats in Marri and Melaleuca woodland, Melaleuca shrubland. | Highly Unlikely – no intact vegetation in winter wet depressions |
| Priority 4 Species | | | |
| <i>Aponogeton hexatepalus</i> | Stalked Water Ribbons | Stalked Water Ribbons grow in freshwater: ponds, rivers, claypans | No – no intact vegetation in winter wet depressions |
| <i>Dodonaea hackettiana</i> | Hackett's Hopbush | Hackett's Hopbush occurs in sand with outcropping limestone. | No – no outcropping limestone |
| <i>Drosera occidentalis</i> | Western Sundew | The Western Sundew occurs in sandy and clayey soils in swamps and wet depressions. | Highly Unlikely – not suitable habitat |
| <i>Stylidium ireneae</i> | | <i>Stylidium ireneae</i> occurs in sandy loam in valleys near creek lines, woodland, often with <i>Agonis</i> . | Highly Unlikely – not suitable habitat |
| <i>Stylidium longitudum</i> | Jumping Jacks | Jumping Jacks prefer sandy clay, clay in seasonal wetlands. | Highly Unlikely – not suitable habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|-------------------------|---|--|
| <i>Stylium striatum</i> | Fan-leaved Triggerplant | The Fan-leaved Triggerplant grows in brown clay loam over laterite on hillslopes in Jarrah/Marri forest, Wandoo woodland. | Unlikely – not lateritic habitat |
| <i>Verticordia lindleyi</i> subsp. <i>lindleyi</i> | | <i>Verticordia lindleyi</i> subsp. <i>lindleyi</i> prefers sand, sandy clay in winter-wet depressions. | Highly Unlikely – not suitable habitat |

* sourced from Florabase (DBCA, 2017) and SPRAT Database (DoEE, 2016) as well as the DBCA database searches unless otherwise denoted

4 LEVEL 1 FAUNA SURVEY

4.1 Methodology

The Level 1 Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2016b). Desktop studies were undertaken to identify habitats and potential threatened species that may occur on the site. A site reconnaissance was conducted by PGV Environmental on 3 March 2021. The inspection included traversing the site on foot.

4.2 Database Searches

Desktop studies were undertaken to identify conservation significant species potentially present on the site. A search of the DBCA Fauna Database (Appendix 7), Naturemap database (Appendix 2) and the EPBC Act Protected Matters Search Tool (Appendix 3) identified threatened species of fauna listed as potentially occurring within a 5km radius of the site (Table 7).

Table 7: List of Fauna Species Identified from Fauna Database Searches

| Scientific Name | Common Name | Conservation Status, WA | Status under EPBC Act |
|--|----------------------------------|-------------------------|---------------------------------|
| <i>Bettongia penicillata ogilbyi</i> (Listed as <i>Bettongia penicillata</i> under the EPBC Act) | Woylie, Brush-tailed Bettong | Schedule 1 - CR | Endangered |
| <i>Calidris ferruginea</i> | Curlew Sandpiper | Schedule 1 - CR | Critically Endangered |
| <i>Numenius madagascariensis</i> | Eastern Curlew | Schedule 1 - CR | Critically Endangered |
| <i>Pseudochirus occidentalis</i> | Western Ringtail Possum, Ngwayir | Schedule 1 - CR | Critically Endangered |
| <i>Botaurus poiciloptilus</i> | Australasian bittern | Schedule 2 - EN | Endangered |
| <i>Calyptorhynchus baudinii</i> | Baudin's Black Cockatoo | Schedule 2 - EN | Endangered |
| <i>Calyptorhynchus latirostris</i> | Carnaby's Black Cockatoo | Schedule 2 - EN | Endangered |
| <i>Leioproctus douglasiellus</i> | A Short-tongued Bee | Schedule 2 - EN | Critically Endangered |
| <i>Myrmecobius fasciatus</i> | Numbat, Walpurti | Schedule 2 - EN | Endangered |
| <i>Neopasiphae simplicior</i> | A Short-tongued Bee | Schedule 2 - EN | Critically Endangered |
| <i>Rostratula australis</i> (<i>Rostratula benghalensis australis</i>) | Australian Painted Snipe | Schedule 2 - EN | Endangered Marine/ Migratory |
| <i>Calyptorhynchus banksii</i> naso | Forest Red-tailed Black-Cockatoo | Schedule 3 - VU | Vulnerable |
| <i>Dasyurus geoffroii</i> | Chuditch, Western Quoll | Schedule 3 - VU | Vulnerable |
| <i>Leipoa ocellata</i> | Mallee Fowl | Schedule 3 - VU | Vulnerable |

| Scientific Name | Common Name | Conservation Status, WA | Status under EPBC Act |
|--|---|------------------------------------|-----------------------|
| <i>Setonix brachyurus</i> | Quokka | Schedule 3 - VU | Vulnerable |
| <i>Sternula nereis nereis</i> (<i>Sterna nereis nereis</i>) | Australian Fairy Tern | Schedule 3 - VU | Vulnerable |
| <i>Westralunio carteri</i> | Carter's Freshwater Mussel | Schedule 3 - VU | Vulnerable |
| <i>Charadrius leschenaultii</i> | Greater Sand Plover | Schedule 3 - VU Schedule 5 - IA | Marine/ Migratory |
| <i>Perameles eremiana</i> | Desert Bandicoot, Walilya | Schedule 4 - EX | Extinct |
| <i>Actitis hypoleucos</i> | Common Sandpiper | Schedule 5 - IA | Marine/ Migratory |
| <i>Apus pacificus</i> | Fork-tailed Swift | Schedule 5 - IA | Marine/Migratory |
| <i>Arenaria interpres</i> | Ruddy Turnstone | Schedule 5 - IA | Marine/ Migratory |
| <i>Calidris acuminata</i> | Sharp-tailed Sandpiper | Schedule 5 - IA | Marine/ Migratory |
| <i>Calidris melanotos</i> | Pectoral Sandpiper | Schedule 5 - IA | Marine/ Migratory |
| <i>Calidris ruficollis</i> | Red-necked Stint | Schedule 5 - IA | Marine/ Migratory |
| <i>Calidris subminuta</i> | Long-toed Stint | Schedule 5 - IA | Marine/ Migratory |
| <i>Gelochelidon nilotica</i> (<i>Sterna nilotica</i>) | Gull-billed Tern | Schedule 5 - IA | |
| <i>Hydroprogne caspia</i> (<i>Sterna caspia</i>) | Caspian Tern | Schedule 5 - IA | Marine/ Migratory |
| <i>Limosa limosa</i> | Black-tailed Godwit | Schedule 5 - IA | Migratory/ Marine |
| <i>Motacilla cinerea</i> | Grey Wagtail | Schedule 5 - IA | Migratory/ Marine |
| <i>Pandion cristatus</i> (<i>Pandion haliaetus</i>) | Osprey | Schedule 5 - IA | Marine/ Migratory |
| <i>Plegadis falcinellus</i> | Glossy Ibis | Schedule 5 - IA | Marine/Migratory |
| <i>Stercorarius longicaudus</i> | Long-tailed Jaeger, Long-tailed Skua | Schedule 5 - IA | Marine/ Migratory |
| <i>Tringa glareola</i> | Wood Sandpiper | Schedule 5 - IA | Marine/ Migratory |
| <i>Tringa nebularia</i> | Common Greenshank | Schedule 5 - IA | Marine/ Migratory |
| <i>Tringa stagnatilis</i> | Marsh Sandpiper, Little Greenshank | Schedule 5 - IA | Marine/ Migratory |
| <i>Phascogale tapoatafa</i> <i>wambenger</i> | South-western Brush-tailed Phascogale, Wambenger | Schedule 6 - CD | |
| <i>Falco peregrinus</i> | Peregrine Falcon | Schedule 7 - OS | Marine/ Migratory |
| <i>Ardea alba</i> | Great Egret, White Egret | | Marine |
| <i>Ardea ibis</i> | Cattle Egret | | Marine |
| <i>Haliaeetus leucogaster</i> | White-bellied Sea-eagle | | Marine |
| <i>Merops ornatus</i> | Rainbow Bee-eater | | Marine |
| <i>Acanthophis antarcticus</i> | Southern Death Adder | Priority 3 | |
| <i>Euoplos inornatus</i> | Inornate Trapdoor Spider (northern Jarrah Forest) | Priority 3 | |
| <i>Idiosoma sigillatum</i> | Swan Coastal Plain shield-backed trapdoor spider | Priority 3 | |
| <i>Lerista lineata</i> | Perth Slider, Lined Skink | Priority 3 | |
| <i>Neelaps calonotos</i> | Black-striped Snake | Priority 3 | |
| <i>Petropseudes dahli</i> | Rock Ringtail Possum | Priority 3 | |

| Scientific Name | Common Name | Conservation Status, WA | Status under EPBC Act |
|---|---|-------------------------|-----------------------|
| <i>Ctenotus delli</i> | Dell's Ctenotus, Darling Range Heath Ctenotus | Priority 4 | |
| <i>Isoodon fusciventer</i> | Southern Brown Bandicoot, Quenda | Priority 4 | |
| <i>Ixobrychus dubius</i> | Australian Little Bittern | Priority 4 | |
| <i>Notamacropus eugenii derbianus</i> | Tammar Wallaby | Priority 4 | |
| <i>Notamacropus irma</i> | Western Brush Wallaby | Priority 4 | |
| <i>Oxyura australis</i> | Blue-billed Duck | Priority 4 | |
| <i>Synemon gratiosa</i> | Graceful Sun-moth | Priority 4 | |
| <i>Thinornis rubricollis</i> (<i>Charadrius rubricollis</i>) | Hooded Plover | Priority 4 | Marine |

Fauna are classified under five different Priority codes and rare and endangered fauna are classified under the *Wildlife Conservation (Specially Protected Fauna) Notice 2014* into five schedules of taxa. These are outlined in Appendix 4.

4.3 Fauna Habitat

PGV Environmental identified six fauna habitats on the site as follows:

- Tall shrubland habitat (Plate 6);
- Open woodland habitat (Plate 7); and
- Cleared habitat (Plate 8).

The Tall Shrubland habitat corresponds to the *Kunzea glabrescens* dominated vegetation and the *Adenantheros cygnorum* Rehabilitated areas. The Open Woodland habitat is associated with the Banksia woodland. The cleared habitat is on the western part of the site in the Completely Degraded areas.

Plate 6: Tall Shrubland Habitat

Plate 7: Open Woodland Habitat

Plate 8: Cleared Habitat

Fauna habitat can be assessed using a number of factors including, the size of the habitat, the level of habitat connectivity, availability of specific resources (eg. tree hollows) and overall vegetation quality. The habitat was assessed according to the following categories:

High Quality Fauna Habitat – These areas closely approximate the vegetation mix and quality that would have been in the area prior to any disturbance. The habitat has connectivity with other habitats and is likely to contain the most natural vertebrate fauna assemblage.

Very Good Fauna Habitat - These areas show minimal signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) and generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be minimally affected by disturbance.

Good Fauna Habitat – These areas showed signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) but generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be affected by disturbance.

Disturbed Fauna Habitat – These areas showed signs of significant disturbance. Many of the trees, shrubs and undergrowth are cleared. These areas may be in the early succession and regeneration stages. Areas may show signs of significant grazing, contain weeds or have been damaged by vehicle or machinery. Habitats are fragmented or have limited connectivity with other fauna habitats. Fauna assemblages in these areas are likely to differ significantly from what might be expected in the area had the disturbance not occurred.

Highly Degraded Fauna Habitat – These areas often have a significant loss of vegetation, an abundance of weeds, and a large number of vehicle tracks or are completely cleared. Limited or no fauna habitat connectivity. Faunal assemblages in these areas are likely to be significantly different to what might have been in the area pre-disturbance. (Coffey Environments, 2009).

The habitat on the site has been highly modified with large cleared areas, tracks and degraded vegetation. The areas of native vegetation generally have limited internal connectivity and form discrete areas on the site. Therefore, the site is considered to be Disturbed Fauna Habitat. The cleared parts of the site are classified as Highly Degraded Fauna Habitat.

4.4 Conservation Significant Species

Outlined below in Table 8 is a short description of the preferred habitat for each of the species that were identified in the DBCA Database Search (Appendix 7), NatureMap Species Report (Appendix 2) and the EPBC Protected Matters Search Tool (Appendix 3) in Table 7. The preferred habitat has been compared to the habitats on the site described above and the likelihood of each species to be present was determined.

Table 8: Preferred Habitat of Conservation Significant Fauna Species

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|------------------------------------|---|--|
| Schedule 1 | | | |
| <i>Bettongia penicillata ogilbyi</i> (Listed as <i>Bettongia penicillata</i> under the EPBC Act) | Woylie, Brush-tailed Bettong | The Woylie habitat types ranged from forest to grassland, coastal and inland. During the day the Woylie shelters under patches of dense undergrowth, logs and rock-cavities and occasionally in burrows. | Highly Unlikely – the site is too disturbed |
| <i>Calidris ferruginea</i> | Curlew Sandpiper | Curlew Sandpipers mainly occur on intertidal mudflats in sheltered coastal areas, such as estuaries, bays, inlets and lagoons, and also around non-tidal swamps, lakes and lagoons near the coast, and ponds in saltworks and sewage farms. | Highly Unlikely – not suitable wetland habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|------------------------------------|----------------------------------|--|--|
| <i>Numenius madagascariensis</i> | Eastern Curlew | The Eastern Curlew is most commonly associated with sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass. Occasionally, the species occurs on ocean beaches (often near estuaries), and coral reefs, rock platforms, or rocky islets. | No – not suitable coastal habitat |
| <i>Pseudocheirus occidentalis</i> | Western Ringtail Possum, Ngwayir | The Western Ringtail Possum is a medium sized nocturnal marsupial. This species occurs in and near coastal Peppermint Tree (<i>Agonis flexuosa</i>) forest and Tuart (<i>Eucalyptus gomphocephala</i>) dominated forest with a Peppermint Tree understorey. | No – not suitable woodland habitat |
| Schedule 2 | | | |
| <i>Botaurus poiciloptilus</i> | Australasian bittern | The Australasian Bittern occurs mainly in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands. | Highly Unlikely – not suitable wetland habitat |
| <i>Calyptorhynchus baudinii</i> | Baudin's Black Cockatoo | Baudin's Black-Cockatoo mainly occurs in eucalypt forests, especially Jarrah (<i>Eucalyptus marginata</i>), Marri (<i>Corymbia calophylla</i>), also Karri (<i>Eucalyptus diversicolor</i>) forest, often feeding in the understorey on proteaceous trees and shrubs, especially banksias (SEWPaC, 2012). | Possible intermittent visitor to the site for foraging |
| <i>Calyptorhynchus latirostris</i> | Carnaby's Black Cockatoo | Carnaby's Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe. It has a preference for feeding on the seeds of Banksia, Hakea, <i>Eucalyptus</i> , <i>Grevillea</i> , <i>Pinus</i> and <i>Allocasuarina</i> spp. It is nomadic often moving toward the coast after breeding. It breeds in tree hollows that are 2.5 - 12m above the ground and have an entrance 23-30cm with a depth of 1-2.5m. Nesting mostly occurs in smooth-barked trees (e.g. Salmon Gum, Wandoo, Red Morrell) (SEWPaC, 2012). | Possible intermittent visitor to the site for foraging |
| <i>Leioproctus douglasiellus</i> | A Short-tongued Bee | The short-tongued bee species is only known from three locations within the Perth metropolitan area ranging from Cannington to Forrestdale. Specimens have been collected on two plant species, <i>Goodenia filiformis</i> and <i>Anthotium junciforme</i> (TSSC, 2013). | No – habitat flora is not present on the site |
| <i>Myrmecobius fasciatus</i> | Numbat, Walpurti | Numbats occur in eucalypt forests and woodlands dominated by <i>Eucalyptus marginata</i> , <i>Corymbia calophylla</i> and <i>Eucalyptus wandoo</i> . | Highly Unlikely – not suitable woodland habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|---|----------------------------------|---|---|
| <i>Neopasiphae simplicior</i> | A Short-tongued Bee | The Short-tongued Bee species is restricted in range, thought to only occur in a single location within the bushland of the Forrestdale Lake Nature Reserve adjacent to Forrestdale Lake and the Armadale Golf Course, with a previous population known from Cannington. It has been collected at flowers of <i>Goodenia filiformis</i> , <i>Lobelia tenuior</i> , <i>Angianthus preissianus</i> and <i>Velleia</i> sp. It occurs in two TECs, Type 8 and Type 10a. Males roost overnight in flowers of Asteraceae. | No – required flora species are not present on the site |
| <i>Rostratula australis</i> (<i>Rostratula benghalensis australis</i>) | Australian Painted Snipe | The Australian Painted Snipe has been recorded at wetlands in all states of Australia but is most common in eastern Australia. It generally inhabits shallow terrestrial freshwater (occasionally brackish) wetlands, including temporary and permanent lakes, swamps and claypans. It also uses inundated or waterlogged grassland or saltmarsh, dams, rice crops, sewage farms and bore drains. Typical sites include a cover of vegetation, including grasses. | Highly Unlikely – not suitable wetland habitat |
| Schedule 3 | | | |
| <i>Calyptorhynchus banksii naso</i> | Forest Red-tailed Black-Cockatoo | Forest Red-tailed Black Cockatoos frequent the humid to sub-humid south-west of Western Australia from Gingin in the north, to Albany in the south and west to Cape Leeuwin and Bunbury (SEWPaC, 2012). It nests in tree hollows with a depth of 1-5m, that are predominately Marri (<i>Corymbia calophylla</i>), Jarrah (<i>Eucalyptus marginata</i>) and Karri (<i>Eucalyptus diversicolor</i>) and it feeds primarily on the seeds of Marri. | Highly Unlikely – very limited suitable habitat on the site |
| <i>Dasyurus geoffroii</i> | Chuditch, Western Quoll | The Chuditch have been known to occupy a wide range of habitats including woodlands, dry sclerophyll forests, riparian vegetation, beaches and deserts. They are opportunistic feeders, and forage on the ground at night, feeding on invertebrates, small mammals, birds and reptiles. | Highly Unlikely – the site is too disturbed |
| <i>Leipoa ocellata</i> | Mallee Fowl | Mallee fowl have been found in mallee regions of southern Australia from approximately the 26th parallel of latitude southwards in mallee bushland. | No – not mallee habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|----------------------------|---|---|
| <i>Setonix brachyurus</i> | Quokka | Quokkas were originally very common on the Swan Coastal Plain, however, their distribution is now limited to Rottnest Island and a few isolated areas in the south-west of WA. On the mainland, they prefer densely vegetated areas around wetlands and streams, whereas on Rottnest Island they inhabit low scrubby coastal vegetation where water is not readily available year-round. | Highly Unlikely – this species is thought to be locally extinct and the site is too disturbed |
| <i>Sternula nereis nereis (Sterna nereis nereis)</i> | Australian Fairy Tern | The Fairy Tern (Australian) nests on sheltered sandy beaches, spits and banks above the high tide line and below vegetation. | Highly Unlikely – not beach habitat |
| <i>Westralunio carteri</i> | Carter's Freshwater Mussel | Carter's Freshwater Mussel is South-West Western Australia's only freshwater mussel (Murdoch University & SERCUL, 2012). Carter's Freshwater Mussel occurs in freshwater streams, rivers, reservoirs and lakes (ICUN, 2015b) and is intolerant to dehydration for more than three days and salinity (Murdoch University & SERCUL, 2012). | No – no permanent water |
| <i>Charadrius leschenaultii</i> | Greater Sand Plover | In Australasia, the Greater Sand Plover is almost entirely coastal, inhabiting littoral and estuarine habitats. They mainly occur on sheltered sandy, shelly or muddy beaches with large intertidal mudflats or sandbanks, as well as sandy estuarine lagoons. | Highly Unlikely – not coastal habitat |
| Schedule 4 | | | |
| <i>Perameles eremiana</i> | Desert Bandicoot, Walilya | The desert bandicoot occupied sand plain and dune environments that supported either hummock or tussock grassland (Burbidge <i>et al.</i> , 1988). | Highly Unlikely – not suitable habitat |
| Schedule 5 | | | |
| <i>Actitis hypoleucus</i> | Common Sandpiper | The Common Sandpiper is mostly found around muddy margins or rocky shores. Generally the species forages in shallow water and on bare soft mud at the edges of wetlands. | No – not mallee habitat |
| <i>Apus pacificus</i> | Fork-tailed Swift | The Fork-tailed Swift is almost exclusively aerial and is not known to breed in Australia. They are seen in inland plains but sometimes above foothills or in coastal areas. They often occur over cliffs and beaches and also over islands and sometimes well out to sea. They also occur over settled areas, including towns, urban areas and cities. <i>Apus pacificus</i> subsp. <i>pacificus</i> is the only subspecies to migrate to Australia. | May fly over the site but unlikely to land |
| <i>Arenaria interpres</i> | Ruddy Turnstone | The Ruddy Turnstone is mainly found on coastal regions with exposed rock coast lines or coral reefs. It also lives near platforms and shelves, often with shallow tidal pools and rocky, shingle or gravel beaches. | Highly Unlikely – not coastal habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--|------------------------|--|--|
| <i>Calidris acuminata</i> | Sharp-tailed Sandpiper | The Sharp-tailed Sandpiper prefers muddy edges of shallow fresh or brackish wetlands, with inundated or emergent sedges, grass, saltmarsh or other low vegetation. | No – not suitable wetland habitat |
| <i>Calidris melanotos</i> | Pectoral Sandpiper | The Pectoral Sandpiper prefers shallow fresh to saline wetlands and is found at coastal lagoons, estuaries, bays, swamps, lakes, inundated grasslands, saltmarshes, river pools, creeks, floodplains and artificial wetlands. | Highly Unlikely – not suitable wetland habitat |
| <i>Calidris ruficollis</i> | Red-necked Stint | The Red-necked Stint is mostly found in coastal areas, including in sheltered inlets, bays, lagoons and estuaries with intertidal mudflats, often near spits, islets and banks and, sometimes, on protected sandy or coralline shores. | Highly Unlikely – not coastal habitat |
| <i>Calidris subminuta</i> | Long-toed Stint | The Long-toed Stint prefers shallow freshwater or brackish wetlands including lakes, swamps, river floodplains, streams, lagoons and sewage ponds. The species is also fond of areas of muddy shoreline, growths of short grass, weeds, sedges, low or floating aquatic vegetation, reeds, rushes and occasionally stunted samphire. | Highly Unlikely – not suitable habitat |
| <i>Gelochelidon nilotica (Sterna nilotica)</i> | Gull-billed Tern | The Gull-billed Tern occurs in coastal areas (Birdlife International, 2015a). | Highly Unlikely – not coastal habitat |
| <i>Hydroprogne caspia (Sterna caspia)</i> | Caspian Tern | The Caspian Tern is mostly found in sheltered coastal embayments (harbours, lagoons, inlets, bays, estuaries and river deltas) and those with sandy or muddy margins are preferred. | Highly Unlikely – not coastal habitat |
| <i>Limosa limosa</i> | Black-tailed Godwit | The Black-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It is found often around beds of seagrass and, sometimes, in nearby saltmarsh. | Highly Unlikely – not coastal habitat |
| <i>Motacilla cinerea</i> | Grey Wagtail | The Grey Wagtail is mostly recorded in coastal areas in Western Australia (ALA, 2015) however is widespread. There is non-breeding habitat only in Australia and the species has a strong association with water, particularly rocky substrates along water courses but also lakes and marshes. | No – not coastal habitat |
| <i>Pandion cristatus (Pandion haliaetus)</i> | Osprey | Ospreys occur in littoral and coastal habitats and terrestrial wetlands of tropical and temperate Australia and offshore islands. They feed on fish, especially mullet where available, and rarely take molluscs, crustaceans, insects, reptiles, birds and mammals. | Highly Unlikely – not coastal habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|---------------------------------------|--|--|---|
| <i>Plegadis falcinellus</i> | Glossy Ibis | The Glossy Ibis is the smallest ibis known in Australia. This species preferred habitat for foraging and breeding are fresh water marshes at the edges of lakes and rivers, lagoons, flood-plains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation but do not breed in South-west Western Australia. | Highly Unlikely – not suitable wetland habitat |
| <i>Stercorarius longicaudus</i> | Long-tailed Jaeger, Long-tailed Skua | The Long-tailed Jaeger is marine and highly pelagic, rarely occurring within sight of land except when breeding (Birdlife International, 2014a). | No – not marine environment |
| <i>Tringa glareola</i> | Wood Sandpiper | The Wood Sandpiper uses well-vegetated, shallow, freshwater wetlands, such as swamps, billabongs, lakes, pools and waterholes. They are typically associated with emergent, aquatic plants or grass, and dominated by taller fringing vegetation, such as dense stands of rushes or reeds, shrubs, or dead or live trees, especially Melaleuca and River Red Gums Eucalyptus camaldulensis and often with fallen timber. | Highly Unlikely – not suitable wetland habitat |
| <i>Tringa nebularia</i> | Common Greenshank | The Common Greenshank is a wader and does not breed in Australia. This species can be found in many types of wetlands and has the widest distribution of any shorebird in Australia. This species typically feeds on molluscs, crustaceans, insects, and occasionally fish and frogs. | Highly Unlikely – not suitable wetland habitat |
| <i>Tringa stagnatilis</i> | Marsh Sandpiper, Little Greenshank | The Marsh Sandpiper lives in permanent or ephemeral wetlands of varying salinity, including swamps, lagoons, billabongs, saltfans, saltmarshes, estuaries, pools on inundated floodplains, and intertidal mudflats and also regularly at sewage farms and saltworks. | Highly Unlikely – not suitable wetland habitat |
| Schedule 6 | | | |
| <i>Phascogale tapoatafa wambenger</i> | South-western Brush-tailed Phascogale, Wambenger | Southern Brush-tailed Phascogales are arboreal marsupials which require tree hollows in suitable woodland or forest and rely on abundant invertebrate prey to sustain populations (Pescott, 2012). | Highly Unlikely – not suitable woodland habitat |
| Schedule 7 | | | |
| <i>Falco peregrinus</i> | Peregrine Falcon | The Peregrine Falcon is found in a variety of habitats but nests on high cliff ledges or artificial structures. It feeds primarily on small-medium sized birds, but occasionally taking insects, such as moths, cicadas and locusts (Birdlife Australia, 2012). | Highly Unlikely – not suitable habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|--------------------------------|---|--|---|
| Marine | | | |
| <i>Ardea alba</i> | Great Egret, White Egret | The Eastern Great Egret has been reported in a wide range of wetland habitats and usually frequents shallow waters. This species feeds on fish, insects, crustaceans, molluscs, frogs, lizards, snakes and small birds and mammals. | Highly Unlikely – not suitable wetland habitat |
| <i>Ardea ibis</i> | Cattle Egret | The Cattle Egret occurs in tropical and temperate grasslands, wooded lands and terrestrial wetlands with breeding in Western Australia recorded in the far north in Wyndham in colonies in wooded swamps such as mangrove forest. This species forages away from water on low lying grasslands, improved pastures and croplands generally in areas that have livestock eating insects, frog, lizards and small mammals. | Possible intermittent visitor to the western low-lying paddocks |
| <i>Haliaeetus leucogaster</i> | White-bellied Sea-eagle | The White-bellied Sea-Eagle is found in coastal habitats with large areas of open water, especially those close to the sea-shore. This species feeds opportunistically on a variety of fish, birds, reptiles, mammals and crustaceans, and on carrion and offal. | Highly Unlikely – not coastal habitat |
| <i>Merops ornatus</i> | Rainbow Bee-eater | Populations of the Rainbow Bee-eater that breed in northern Australia are considered to be resident, and in many northern localities the Rainbow Bee-eater is present throughout the year. The Rainbow Bee-eater nests in a burrow dug in the ground. It is found across the better-watered parts of WA including islands preferring lightly wooded, sandy country near water. | Possible intermittent visitor to the sandy batter slopes of the old sand mine |
| Priority 3 | | | |
| <i>Acanthophis antarcticus</i> | Southern Death Adder | Southern Death Adders inhabit a range of habitats, including rainforest, scrubland, semi arid zones and rocky outcrops. Typically during the day they remain mostly buried beneath sand, soil or debris, with just the tail and top of the head exposed. They do not actively hunt their prey but are cryptic snakes which sit motionlessly, sometimes for months on end, constantly watching for any animal which unwittingly comes within striking distance (Pilbara Pythons, 2014). | Highly Unlikely – the site is too disturbed |
| <i>Euoplos inornatus</i> | Inornate Trapdoor Spider (northern Jarrah Forest) | The Inornate Trapdoor Spider is recorded from clay creek banks (ALA, 2019). | Highly Unlikely – not suitable clay habitat |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|---------------------------------------|--|---|---|
| <i>Idiosoma sigillatum</i> | Swan Coastal Plain shield-backed trapdoor spider | The Swan Coastal Plain Shield-backed Trapdoor Spider arranges fallen twigs from the sheoak tree around the rim of its burrow entrance, enabling it to feel the vibrations of unsuspecting prey that wander by (Curtin, 2018). | Highly Unlikely – one small Sheoak only present on the site |
| <i>Lerista lineata</i> | Perth Slider, Lined Skink | The Lined Skink is a burrowing species that occurs in pale sandy soils with coastal heath and shrubland areas in isolated populations in the south-west and mid-west coast of Western Australia. It feeds on termites and other small insects (AROD, 2014). | Possible |
| <i>Neelaps calonotos</i> | Black-striped Snake | The Black-striped snake has a limited distribution, inhabiting areas with sandy soils that support heathlands and Banksia/Eucalypt Woodlands (Nevill, 2005) on the Swan Coastal Plain generally in the lower west coast from Lancelin to Mandurah (Storr <i>et al.</i> , 1999). | Possible |
| <i>Petropseudes dahli</i> | Rock Ringtail Possum | The Rock Ringtail Possum is a nocturnal species of rocky outcrops with nearby trees and foliage (Webb <i>et al.</i> , 2008). | Highly Unlikely – no rocky outcrop habitat and the site is too disturbed |
| <i>Ctenotus delli</i> | Dell's Ctenotus, Darling Range Heath Ctenotus | Dell's Ctenotus is found in the north Darling Range of south-western WA in dry sclerophyll forests on stony hills and ranges (Cogger, 2014). | Highly Unlikely – not suitable habitat |
| Priority 4 | | | |
| <i>Isoodon fusciventer</i> | Southern Brown Bandicoot, Quenda | Southern Brown Bandicoots are small grey marsupials that prefer dense scrub (up to one metre high). Their diet includes invertebrates (including earthworms, adult beetles and their larvae), underground fungi, subterranean plant material, and very occasionally, small vertebrates (DEC, 2012a). | Possible |
| <i>Ixobrychus dubius</i> | Australian Little Bittern | The Australian Little Bittern is mainly found in freshwater wetlands, where they inhabit dense emergent vegetation of reeds and sedges, and inundated shrub thickets. They are also occasionally found in brackish and saline wetlands such as mangrove swamps, Juncus-dominated salt marsh and the wooded margins of coastal lagoons (Naturewatch NZ, 2014). | Possible |
| <i>Notamacropus eugenii derbianus</i> | Tammar Wallaby | The Tammar Wallaby prefers dense, low vegetation for daytime shelter and open grassy areas for feeding. This species inhabits coastal scrub, heath, dry sclerophyll forest and thickets in mallee and woodland (DEC, 2012b). | Possible intermittent visitor to the site but unlikely to rely on the site for survival |

| Scientific Name | Common Name | Habitat* | Likelihood to occur on the site |
|---|-----------------------|---|---|
| <i>Notamacropus irma</i> | Western Brush Wallaby | The Western Brush Wallaby is a medium sized marsupial and its optimum habitat is open forest or woodland, particularly favouring open, seasonally wet flats with low grasses and open scrubby thickets (DEC, 2012c). | Possible intermittent visitor to the site but unlikely to rely on the site for survival |
| <i>Oxyura australis</i> | Blue-billed Duck | The Blue-billed Duck is found on terrestrial wetlands in temperate regions, that are freshwater to saline, and may be natural or artificial. It nests in rushes, sedges, Lignum Muehlenbeckia cunninghamii and paperbark Melaleuca (Birdlife International, 2015b). The species is almost completely aquatic, and is seldom seen on land. Non-breeding flocks, often with several hundred individuals, congregate on large, deep open freshwater dams and lakes in autumn. The daylight hours are spent alone in small concealed bays within vegetation or communally in large exposed rafts far from the shore (Birds in Backyards, 2015). | No - no permanent water on the site |
| <i>Synemon gratiosa</i> | Graceful Sun-moth | The Graceful Sun-moth is a diurnal moth with dull coloured brown to black forewings and brightly coloured orange hind wings. The larvae burrow into the rhizomes of <i>Lomandra maritima</i> and <i>Lomandra hermaphrodita</i> exclusively and therefore require the presence of one or both of these species to be present in an area (Bishop et al., 2011). | No – no habitat flora for this species on the site |
| <i>Thinornis rubricollis</i> (<i>Charadrius rubricollis</i>) | Hooded Plover | The Hooded Plover primarily inhabits sandy, ocean beaches, with the highest densities on beaches with large amounts of beach-washed seaweed that are backed by extensive open dunes. In Western Australia the species also inhabits inland and coastal salt lakes (Birdlife International 2014b). | No – not beach habitat |

* Habitat descriptions from DotEE (2016) SPRAT Database unless otherwise denoted

The species that are identified as possibly present on the site are:

- Carnaby's Black Cockatoo (*Calyptorhynchus latirostris*) (Endangered);
- Baudin's Black Cockatoo (*Calyptorhynchus baudinii*) (Endangered);
- Cattle Egret (*Ardea ibis*) (Marine);
- Rainbow Bee-eater (*Merops ornatus*) (Marine);
- Perth Slider, Lined Skink (*Lerista lineata*) (Priority 3);
- Black-striped Snake (*Neelaps calonotos*) (Priority 3);
- Southern Brown Bandicoot, Quenda (*Isoodon fusciventer*) (Priority 4).

The site does not contain any tall trees that could be used for roosting or breeding by Black Cockatoos. The Banksia trees provide foraging habitat for Carnaby's and Baudin's Black Cockatoos. Some evidence of foraging by Carnaby's Black Cockatoos was observed on Banksia cones on the site (Plate 9). The site contained only one Sheoak tree suitable for foraging by Forest Red-tailed Black Cockatoos.

Overall, the two stands of Banksia trees on the site are not considered high quality foraging habitat due to the relatively low density of trees. The two areas provide 1.05ha (eastern area) and 0.31ha (northwestern area) of low quality foraging habitat, respectively.

Plate 9: Chewed Banksia Cone

4.5 Biodiversity Value

From a fauna perspective, the vegetation on the site consists of Highly Degraded or Disturbed Fauna Habitat that would not support many native fauna species. Native fauna assemblages on the site are likely to be impacted by the presence of introduced feral species such as feral Cats, Foxes, Rabbits, Black Rats and House Mice.

It is not possible to assess the biodiversity value at a genetic level based on the information available, however due to the disturbed nature of the site the biodiversity value at the genetic level is highly unlikely to be impacted as a result of developing the site.

5 SUMMARY AND CONCLUSIONS

The 2021 Reconnaissance Flora and Vegetation Survey and Level 1 Fauna Survey resulted in the following findings:

- The site was almost completely cleared prior to 1974, and has largely been mined for sand with mined areas not regenerating to its pre-clearing condition. Intact native vegetation occurs on less than 1ha of the site;
- No Threatened (Declared Rare) species are expected to occur on the site. The Reconnaissance survey recorded 53 plant species including 42 native and 11 introduced. A spring survey would record many more weed species and some native ephemerals. However, none of these are expected to be Threatened species;
- Four vegetation types were mapped on the site, including one native type with an intact understorey – *Banksia attenuata/B. menziesii/Kunzea glabrescens* Low Open Woodland, one area of native trees over pasture species (*Eucalyptus rufa* Open Woodland) and two vegetation types occurring on the areas that were sand mined;
- The condition of most the vegetation on the site is Degraded to Completely Degraded. An area of Banksia Low Open Woodland at the eastern end was rated as Good with some areas in Very Good condition;
- Most of the vegetation was too degraded to be assigned a Floristic Community Type. The area of Banksia Low Open Woodland at the eastern end is most likely representative of FCT 23a which is not a Threatened or Priority Ecological Community;
- The Banksia woodland at the eastern end of the site is around 1.05ha on Lot 4 and is continuous with similar Banksia woodland on Lot 5 to the north. The total area of Banksia woodland on the eastern part of Lot 4 and on Lot 5 is around 5.7ha. The combined area is considered part of the EPBC listed Banksia Woodlands of the Swan Coastal Plain TEC;
- Three fauna habitats are described on the site. The fauna habitats are assessed as Disturbed and Highly Degraded Fauna Habitat;
- Conservation Significant species that may have habitat on the site include Carnaby's and Baudin's Black Cockatoos, two other bird species, two reptiles and the Quenda/Southern Brown Bandicoot; and
- The site does not contain any trees for roosting or breeding by Black Cockatoos. There is evidence of use of the site by Carnaby's Black Cockatoos for foraging. Two stands of Banksia woodland provide 1.05ha (eastern stand) and 0.31ha (northwestern stand) of low quality foraging habitat.

Conservation Codes

T - Rare or likely to become extinct
X - Presumed extinct
IA - Protected under international agreement
S - Other specially protected fauna
1 - Priority 1
2 - Priority 2
3 - Priority 3
4 - Priority 4
5 - Priority 5

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

APPENDIX 3

Protected Matters Search Tool Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about [Environment Assessments](#) and the EPBC Act including significance guidelines, forms and application process details.

Report created: 18/03/21 17:29:21

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

| | |

| World Heritage Properties: | None |
| National Heritage Places: | None |
| Wetlands of International Importance: | 2 |
| Great Barrier Reef Marine Park: | None |
| Commonwealth Marine Area: | None |
| Listed Threatened Ecological Communities: | 4 |
| Listed Threatened Species: | 27 |
| Listed Migratory Species: | 9 |

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Invasive Species

[Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resources Audit, 2001.

| Name | Status | Type of Presence |
|---|--------|--|
| Birds | | |
| <i>Acridotheres tristis</i> Common Myna, Indian Myna [387] | | Species or species habitat likely to occur within area |
| <i>Anas platyrhynchos</i> Mallard [974] | | Species or species habitat likely to occur within area |
| <i>Carduelis carduelis</i> European Goldfinch [403] | | Species or species habitat likely to occur within area |
| <i>Columba livia</i> Rock Pigeon, Rock Dove, Domestic Pigeon [803] | | Species or species habitat likely to occur within area |
| <i>Passer domesticus</i> House Sparrow [405] | | Species or species habitat likely to occur within area |
| <i>Passer montanus</i> Eurasian Tree Sparrow [406] | | Species or species habitat likely to occur within area |
| <i>Streptopelia chinensis</i> Spotted Turtle-Dove [780] | | Species or species habitat likely to occur within area |
| <i>Streptopelia senegalensis</i> Laughing Turtle-dove, Laughing Dove [781] | | Species or species habitat likely to occur within area |
| <i>Sturnus vulgaris</i> Common Starling [389] | | Species or species habitat likely to occur within area |
| <i>Turdus merula</i> Common Blackbird, Eurasian Blackbird [596] | | Species or species habitat likely to occur within area |
| Mammals | | |
| <i>Bos taurus</i> Domestic Cattle [16] | | Species or species habitat likely to occur within area |
| <i>Canis lupus familiaris</i> Domestic Dog [82654] | | Species or species habitat likely to occur within area |
| <i>Felis catus</i> Cat, House Cat, Domestic Cat [19] | | Species or species habitat likely to occur within area |
| <i>Funambulus pennantii</i> Northern Palm Squirrel, Five-striped Palm Squirrel [129] | | Species or species habitat likely to occur within area |
| <i>Mus musculus</i> House Mouse [120] | | Species or species habitat likely to occur within area |
| <i>Oryctolagus cuniculus</i> Rabbit, European Rabbit [128] | | Species or species habitat likely to occur within area |

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018*.

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of ‘Specially Protected Fauna’ listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be “*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be “*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be “*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of $\leq 100\text{ha}$).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or;
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

APPENDIX 6

Flora Species List

Lot 4 King Road Species List (provisional)

* - non-native or planted

GYMNOSPERMS

CYCADACEAE

Macrozamia riedlei

MONOCOTYLEDONS

ANACARDIACEAE

Lyginia barbata

ASPARAGACEAE

Lomandra sp.

COLCHICACEAE

Burchardia congesta

CYPERACEAE

Caustis dioica

Lepidosperma pubisquamum

DASYPOGONACEAE

Dasygordon bromeliifolius

HAEMODORACEAE

Conostylis aculeata

HEMEROCALLIDACEAE

Arnocrinum preissii

Corynotheca micrantha

Dianella revoluta var. *divaricata*

IRIDACEAE

**Gladiolus caryophyllaceus*

Patersonia occidentalis

POACEAE

Amphipogon turbinatus

**Briza maxima*

**Ehrharta calycina*

**Eragrostis curvula*

RESTIONACEAE

Desmocladus flexuosus

XANTHORRHOEACEAE

Xanthorrhoea preissii

DICOTYLEDONS

AIZOACEAE

**Carpobrotus edulis*

ASTERACEAE

**Ursinia anthemoides*

CASUARINACEAE

Allocasuarina fraseriana

COMMELINACEAE

Cartonema philydroides

DILLENIACEAE

Hibbertia hypericoides

Hibbertia subvaginata

ERICACEAE

Conostephium pendulum

Styphelia xerophylla

EUPHORBIACEAE

**Ricinus communis*

FABACEAE

Acacia huegelii

**Acacia longifolia*

Bossiaea eriocarpa

Daviesia triflora

Gompholobium tomentosum

Jacksonia furcellata

Jacksonia sternbergiana

GERANIACEAE

**Pelargonium capitatum*

GOODENIACEAE

Dampiera linearis

Lechenaultia floribunda

LAMIACEAE

Hemiandra pungens

MYRTACEAE

**Calothamnus quadrifidus*
Calytrix fraseri
Eucalyptus rufa
**Eucalyptus todiana*
Kunzea glabrescens
Melaleuca teretifolia
Scholtzia involucrata

PROTEACEAE

Adenanthera cygnorum
Banksia attenuata
Banksia ilicifolia
Banksia menziesii
Hakea trifurcata
Stirlingia latifolia
Synaphea spinulosa
