

LOT 5 KING ROAD, OLDBURY

DETAILED FLORA AND VEGETATION SURVEY

Prepared for: The A. Poli Superannuation Fund and ARD No. 4

Report Date: 20 January 2022

Version: 2

Report No. 2021-637

The logo for PGV Environmental is located in the bottom right corner of the page. It features the letters 'PGV' in a large, bold, white sans-serif font. Below 'PGV', the word 'ENVIRONMENTAL' is written in a smaller, white, all-caps sans-serif font. The background of the logo area is a vibrant orange with a subtle pattern of fine, white, curved lines that create a sense of movement and depth.

1 INTRODUCTION

1.1 Background

Lot 5 King Road, Oldbury is located in the Shire of Serpentine-Jarrahdale approximately 33km south-south-east of the Perth Central Business District (Figure 1). The site is 14.26ha in size and is bounded by King Road and rural land to the west and rural land to the north, south and east (Figure 2).

The western half of the lot has previously been cleared and native vegetation remains on the eastern half. Approximately 7ha of native vegetation remains on the site.

The landowners, A. Poli Superannuation Fund and ARD No. 4, propose to quarry sand from the eastern part of the lot. PGV Environmental was commissioned by the landowners to undertake a flora and vegetation survey to assist in the assessment of environmental applications to clear the vegetation prior to sand mining.

1.2 Scope of Works

A Detailed Flora and Vegetation Survey was undertaken in accordance with EPA Technical Guidance *Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA, 2016). The survey included the following:

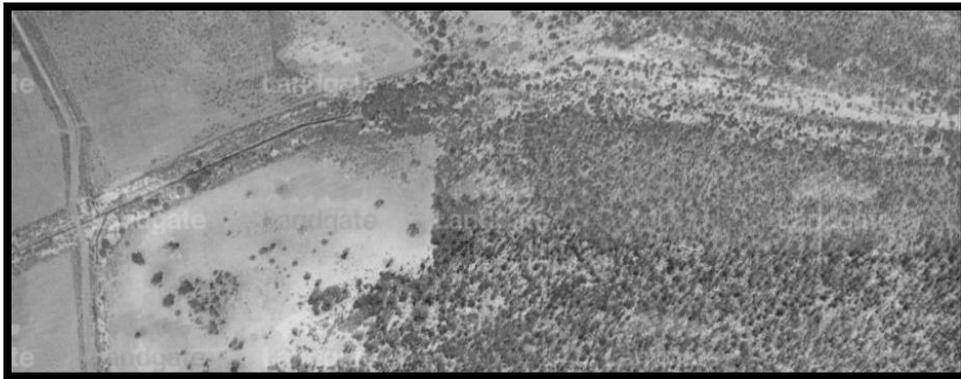

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority flora and ecological community databases;
- A search of the Naturemap website (DBCA, 2020);
- A search of the Commonwealth Government's Protected Matters Search Tool (DAWE, 2020) to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation (EPBC) Act 1999*;
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Recording of any significant plant species using a hand-held GPS;
- Description and mapping of vegetation types and vegetation condition; and
- Compilation of a flora list.

2 EXISTING ENVIRONMENT

2.1 Land Use

The earliest available historic aerial photograph on-line from 1953 shows that the western half of the site has been cleared while native vegetation remains in the eastern half (Plate 1) (Landgate, 2021).

Plate 1: Aerial Photograph 1953 (Landgate, 2021)

The aerial photograph from 1974 shows that most of the site apart from a strip along the northern boundary has been extensively cleared (Plate 2) (Landgate, 2021).

Plate 2: Aerial Photograph 1974 (Landgate, 2021)

The aerial photograph from 1985 shows the vegetation in the eastern end has regrown from the past clearing and sand mining has started on the lot to the south (Plate 3).

Plate 3: Aerial Photograph 1985 (Landgate, 2021)

Sand mining to the south continued progressively over the next few years and the limit of the mining operation was reached in 2008 (Plate 4). The footprint of the mining operations extended into Lot 5.

Plate 4: Aerial Photograph 2008 (Landgate, 2021)

The site is zoned 'Rural' under the Metropolitan Region Scheme (MRS) and the Shire of Serpentine-Jarrahdale Local Planning Scheme No. 2 (WAPC, 1989).

The site does not contain any buildings or structures and is not used for grazing.

2.2 Topography

The site is flat at the western end at around 22m Australian Height Datum (AHD) and slopes up to the east to a maximum of around 28m AHD (Figure 2).

2.3 Geology and Soils

2.3.1 Geology

The site is mapped as part of the Bassendean System, the oldest of the three dune systems on the Swan Coastal Plain (Bolland, 1998). The Bassendean System consists of very low relief, leached, grey siliceous Pleistocene sand dunes, intervening sandy and clayey swamps and gently undulating plains. These occur immediately west of, and partly overlie, the Pinjarra Plain. These soils are very leached, infertile and mildly acidic (DPIRD, 2020).

2.3.2 Soils

The soils on the site have been described by the Department of Primary Industry and Regional Development (DPIRD) as:

- Bassendean B1 Phase (212Bs_B1) mapped on it which are extremely low to very low relief dunes, undulating sandplain and discrete sand rises with deep bleached grey sands sometimes with a pale yellow B horizon or a weak iron-organic hardpan at depths generally greater than 2 m (DPIRD, 2021). These soils occur in the eastern part of the site; and
- Bassendean B6 Phase (212Bs_B6) which is described as sandplain and broad extremely low rises with imperfectly drained deep or very deep grey siliceous sands (DPIRD, 2021). These soils occur on the western part of the site.

2.4 Hydrology

Groundwater is at approximately 19 to 20m AHD and is 1 to 9m below the surface level, and generally flows to the south-east (DWER, 2021).

The western part of the site contains a small area of a large Multiple Use Wetland (Unique Feature Identifier 14704) that extends for 277ha over a wide area to the west and north-west of the site. The MU wetland is shown on Plate 5 as the blue area. The wetland is classified as Dampland although the extent of the wetland indicates to PGV Environmental that it should more accurately be classified as a Palusplain wetland.

Plate 5: Multiple Use Wetland Mapped on the Site

3 METHODOLOGY

3.1 Database Searches

Searches of the following databases were undertaken prior to the site survey:

- Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority Flora database and Threatened Ecological Communities database (Appendix 1) with a buffer radius of 10km;
- DBCA Naturemap Database (DBCA, 2021) (Appendix 2) with a buffer radius of 10km; and
- The Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation (EPBC) Act 1999* (DAWE, 2021). A radius of 5km was used for this database (Appendix 3).

3.2 Site Survey

A site reconnaissance survey was conducted by Dr Paul van der Moezel from PGV Environmental on 3 March 2021. The survey included walking through the site to record vegetation types and vegetation condition. A provisional species list was also recorded.

A Detailed flora and vegetation survey of the site was conducted by Dr Paul van der Moezel of PGV Environmental on 7 October 2021.

The eastern well-vegetated part of the site was thoroughly walked on north-south transects spaced about 20m apart. The small amount of native vegetation in the western part was waled close to the northern boundary. Track log is shown in Plate 6. All plant species were recorded and information on flora composition and vegetation structure was recorded in five 10m x 10m non-permanent quadrats in representative vegetation types.

Most plant species were identified in the field. Some specimens were photographed or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

Plate 6: Track Log

3.3 Survey Conditions

The conditions that the survey was undertaken in are presented in Table 1 in order to assess the adequacy of the survey. In summary, there were no significant constraints to the survey.

Rainfall for Oldbury was above average for July in 2021 being 315mm and below average in August being 79.8mm compared to average values of 174.7mm and 127.3mm (BOM, 2021). The rainfall in September was 47.2mm compared to an average of 83.3mm (BOM, 2021). The above average rainfall in July is likely to have compensated for the low rainfall in August and September and is not considered to be a constraint on the survey.

Table 1: Statement of Botanical Survey Conditions

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has extensive botanical survey experience on the Swan Coastal Plain, including the Oldbury area.
Proportion of the flora identified^	No	The timing of the survey in early October was optimal to identify most flora species on the site including all potential Threatened and Priority Flora. No follow-up survey required.
Sources of information (historic/recent or new data)	No	The flora in the Oldbury area is well documented.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The spring survey was optimal for most flora species. 2021 was a good year for ephemeral species.
Disturbances (Fire)	No	The fire age was more than 5 years and does not appear to have been burnt for at least 40 years.
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	The time spent on the site and relative ease of access made for a full coverage.
Completeness (e.g. was relevant area fully surveyed)	No	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook most plant identifications on site.
Remoteness and/or access problems	No	Easily accessible site in the Perth Metropolitan Region
Availability of contextual (e.g. bioregional) information for the study area.	No	Bush Forever

*Constraints have been rated as Significant, Moderate or No constraints

^Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

4 RESULTS

4.1 Flora Database Searches

The search of the DBCA Threatened and Priority Flora Databases: the WA Herbarium database (WAHerb), the Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 1) and Naturemap (Appendix 2) indicates that a number of species that are listed as Endangered, Threatened or Priority have been recorded within a 10km radius of the site. The EPBC Act Protected Matters Search Tool (Appendix 3) identifies species listed under the EPBC Act as potentially having habitat in the area. The results from these database searches are shown in Table 2. None of the species has been recorded from the survey area.

Table 2: Conservation Significant Flora Identified in Database Searches

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Caladenia huegelii</i>	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	Schedule 1	Endangered
<i>Calectasia cyanea</i>	Blue Tinsel Lily	Schedule 1	Critically Endangered
<i>Drakaea elastica</i>	Glossy-leafed Hammer Orchid	Schedule 1	Endangered
<i>Eucalyptus x balanites</i>	Cadda Road Mallee	Schedule 1	Endangered
<i>Synaphea</i> sp. Fairbridge Farm (D Papenfus 696)	Selena's <i>Synaphea</i>	Schedule 1	Critically Endangered
<i>Synaphea</i> sp. Serpentine (G.R Brand 103)		Schedule 1	Critically Endangered
<i>Diuris purdiei</i>	Purdie's Donkey-orchid	Schedule 2	Endangered
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Schedule 2	Vulnerable
<i>Grevillea curviloba</i> subsp. <i>incurva</i>	Narrow curved-leaf <i>Grevillea</i>	Schedule 2	Endangered
<i>Lepidosperma rostratum</i>	Beaked <i>Lepidosperma</i>	Schedule 2	Endangered
<i>Synaphea</i> sp. Pinjarra Plain (A.S George 17182)		Schedule 2	Endangered
<i>Thelymitra stellata</i>	Star Sun-orchid	Schedule 2	Endangered
<i>Andersonia gracilis</i>	Slender <i>Andersonia</i>	Schedule 3	Endangered
<i>Diuris micrantha</i>	Dwarf Bee-orchid	Schedule 3	Vulnerable
<i>Tetraria australiensis</i>	Southern <i>Tetraria</i>	Schedule 3	Vulnerable
<i>Acacia lasiocarpa</i> var. <i>bracteolata</i> long peduncle variant (G.J. Keighery 5026)		Priority 1	
<i>Boronia juncea</i> subsp. <i>juncea</i>		Priority 1	
<i>Amanita wadulawitu</i>	Long-spored <i>Lepidella</i>	Priority 2	

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Calectasia grandiflora</i>	Blue Tinsel Lily	Priority 2	
<i>Johnsonia pubescens</i> subsp. <i>cygnorum</i>		Priority 2	
<i>Levenhookia pulcherrima</i>	Beautiful Stylewort	Priority 2	
<i>Poranthera moorokatta</i>		Priority 2	
<i>Tetraria</i> sp. Chandala (G.J. Keighery 17055)		Priority 2	
<i>Amanita fibrillopes</i>	Peach Amanita	Priority 3	
<i>Amanita preissii</i>	Cinnamon-ring Lepidella	Priority 3	
<i>Amanita wadjukiorum</i>	Wadjuk Lepidella	Priority 3	
<i>Angianthus drummondii</i>		Priority 3	
<i>Babingtonia urbana</i>	Coastal Plain Babingtonia	Priority 3	
<i>Cyathochaeta teretifolia</i>		Priority 3	
<i>Dillwynia dillwynioides</i>		Priority 3	
<i>Eryngium pinnatifidum</i> subsp. <i>Palustre</i> (G.J. Keighery 13459)		Priority 3	
<i>Jacksonia gracillima</i>		Priority 3	
<i>Meionectes tenuifolia</i>		Priority 3	
<i>Pithocarpa corymbulosa</i>		Priority 3	
<i>Schoenus capillifolius</i>		Priority 3	
<i>Schoenus pennisetis</i>		Priority 3	
<i>Schoenus</i> sp. Waroona (G.J. Keighery 12235)		Priority 3	
<i>Stylidium aceratum</i>		Priority 3	
<i>Stylidium paludicola</i>		Priority 3	
<i>Aponogeton hexatepalus</i>	Stalked Water Ribbons	Priority 4	
<i>Dodoniaea hackettiana</i>	Hackett's Hopbush	Priority 4	
<i>Drosera occidentalis</i>	Western Sundew	Priority 4	
<i>Stylidium ireneae</i>		Priority 4	
<i>Stylidium longitubum</i>	Jumping Jacks	Priority 4	
<i>Stylidium striatum</i>	Fan-leaved Triggerplant	Priority 4	
<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i>		Priority 4	

Definitions of the Conservation Codes are in Appendix 5.

Based on the soil types and vegetation type and conditions observed during the survey the likelihood of conservation significant species identified in the database searches occurring on the site has been examined (Table 3). In summary, one Threatened species and three Priority species have potential to occur in the well-vegetated eastern dry sandy soil part of the site. The Threatened species is the Grand Spider Orchid (*Caladenia huegelii*) which flowers from mid-September to mid-October.

Table 3: Likelihood of Identified Significant Flora Species Occurring on the Site

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Critically Endangered			
<i>Caladenia huegelii</i>	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	The Grand Spider-orchid prefers deep grey-white sand usually associated with the Bassendean sand-dune system, however, rare plants have been known to extend into the Spearwood system (in which calcareous yellow sands dominate) in some areas (DEC, 2009a). This species generally does not survive in disturbed areas.	Possible on eastern well vegetated sandy area
<i>Calectasia cyanea</i>	Blue Tinsel Lily	The Blue Tinsel Lily prefers white, grey or yellow sand or gravel. This species is restricted to Torndirrup National Park and Albany region of the South-West Botanical Province (Barrett and Dixon, 2001).	No – this record was prior to the species being defined by its location
<i>Drakaea elastica</i>	Glossy-leafed Hammer Orchid	The Glossy-leafed Hammer Orchid prefers low-lying situations adjoining winter-wet swamps. This species does not survive in disturbed areas (DEC, 2009b).	Highly Unlikely as no intact vegetation on winter-wet swamps occur
<i>Eucalyptus x balanites</i>	Cadda Road Mallee	The Cadda Road Mallee prefers sandy soils with lateritic gravel.	Highly Unlikely – not lateritic habitat
<i>Synaphea</i> sp. Fairbridge Farm (D Papenfus 696)	Selena's Synaphea	Selena's Synaphea occurs in sandy soils with lateritic pebbles near winter-wet flats, in low woodland with weedy grasses.	Highly Unlikely – not lateritic habitat
<i>Synaphea</i> sp. Serpentine (G.R Brand 103)		<i>Synaphea</i> sp. Serpentine occurs in greybrown sandy loams or clay in seasonally wet areas (DPaW, 2017).	Highly Unlikely – not suitable habitat
Endangered			
<i>Diuris purdiei</i>	Purdie's Donkey-orchid	Purdie's Donkey Orchid occurs in grey-black sand in moist winter-wet swamps.	Highly Unlikely – not suitable habitat
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Dwarf Hammer-orchid occurs in grey sands over dark, grey to blackish, sandy clay-loam substrates in winter wet depressions or swamps.	Highly Unlikely – not suitable habitat
<i>Grevillea curviloba</i> subsp. <i>incurva</i>	Narrow curved-leaf Grevillea	Narrow curved-leaf Grevillea prefers sand, sandy loam in winter-wet heath.	Highly Unlikely – not peaty or clay habitat
<i>Lepidosperma rostratum</i>	Beaked Lepidosperma	Beaked Lepidosperma is found in peaty sand, clay.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Synaphea</i> sp. Pinjarra Plain (A.S George 17182)		<i>Synaphea</i> sp. Pinjarra Plain occurs in grey sandy loam or clay, grey-brown clayey sand, brown clayey loam, laterite on flats, seasonally wet areas, railroad reserves often with wet depressions or drains.	Highly Unlikely due to absence of appropriate soil types and intact vegetation on wet areas
<i>Thelymitra stellata</i>	Star Sun-orchid	The Star Sun-orchid prefers sand, gravel or lateritic loam.	No – not suitable habitat
Vulnerable			
<i>Andersonia gracilis</i>	Slender Andersonia	Slender Andersonia occurs in white/grey sand, sandy clay, gravelly loam in winter-wet areas, near swamps.	Highly Unlikely due to absence of intact vegetation in winter-wet areas
<i>Diuris micrantha</i>	Dwarf Bee-orchid	The Dwarf Bee-orchid is usually found on brown loamy clay in winter-wet swamps, in shallow water.	No – not suitable habitat
<i>Tetraria australiensis</i>	Southern Tetraria	Southern Tetraria occurs in grey sand over clay; also described as yellow and sandy or clayey lateritic soils favouring winter-wet swampy depressions, drainage lines or rises surrounding swamps.	Highly Unlikely – not suitable habitat
Priority 1 Species			
<i>Acacia lasiocarpa</i> var. bracteolata long peduncle variant (G.J. Keighery 5026)		This variant of <i>Acacia lasiocarpa</i> occurs in grey or black sand over clay in swampy areas, winter wet lowlands.	Highly Unlikely – not clayey habitat
<i>Boronia juncea</i> subsp. <i>juncea</i>		<i>Boronia juncea</i> subsp. <i>juncea</i> occurs in sand in low scrub	Highly Unlikely – upland too degraded
Priority 2 Species			
<i>Amanita wadulawitu</i>	Long-spored Lepidella	Long-spored Lepidella occurs in sandy soil with <i>Corymbia calophylla</i> , <i>Eucalyptus marginata</i> , <i>E. todtiana</i> , <i>E. camaldulensis</i> , <i>Jacksonia furcellata</i> , <i>Banksia attenuata</i> and <i>B. menziesii</i> . (McGurk et al., 2016).	Possible
<i>Calectasia grandiflora</i>	Blue Tinsel Lily	Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges.	Highly Unlikely – not calcareous soils
<i>Johnsonia pubescens</i> subsp. <i>cygnorum</i>		<i>Johnsonia pubescens</i> subsp. <i>cygnorum</i> occurs on grey-white-yellow sand on flats on seasonally-wet sites	Unlikely – to degraded uplands

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Levenhookia pulcherrima</i>	Beautiful Stylewort	Beautiful Stylewort grows in sand.	Highly Unlikely – not suitable habitat
<i>Poranthera moorokatta</i>		<i>Poranthera moorokatta</i> grows in white silica sand and has been recorded in Banksia woodland and in a shallow dampland (Barrett, 2012).	Possible
<i>Tetraria</i> sp. Chandala (G.J. Keighery 17055)		<i>Tetraria</i> sp. Chandala is recorded from a mound spring in peaty sand (Western Australian Herbarium, 2005).	No – no mound spring on the site
Priority 3 Species			
<i>Amanita fibrilloses</i>	Peach Amanita	Peach Amanita is recorded from sandy or gravelly soil in dry sclerophyll forest and Banksia woodland, or in humus rich soil in seasonally wet eucalypt and paperbark woodland, often associated with <i>Eucalyptus marginata</i> , <i>E. jacksonii</i> , <i>Allocasuarina fraseriana</i> , <i>Corymbia calophylla</i> , <i>Melaleuca preissiana</i> and <i>Agonis</i> sp. (Davison <i>et al.</i> , 2013).	Unlikely – not suitable habitat
<i>Amanita preissii</i>	Cinnamon-ring Lepidella	Cinnamon-ring Lepidella is found under shrubs and Eucalyptus in West Australia (Amanitaceae Org, 2015) in sandy soil and lateritic gravel, associated with <i>Allocasuarina fraseriana</i> , <i>Acacia pulchella</i> , <i>Corymbia calophylla</i> , <i>Callitris</i> sp., <i>Eucalyptus gomphocephala</i> , <i>E. marginata</i> , <i>Macrozamia fraseri</i> and <i>Pinus pinaster</i> (Davidson <i>et al.</i> , 2017).	Highly Unlikely – not suitable habitat
<i>Amanita wadjukiorum</i>	Wadjuk Lepidella	Wadjuk Lepidella is solitary to gregarious, in sandy soil in degraded native vegetation with <i>Allocasuarina fraseriana</i> , <i>Corymbia calophylla</i> , <i>C. citriodora</i> and <i>Brachychiton</i> sp (Davidson <i>et al.</i> , 2013).	Highly Unlikely – not suitable habitat
<i>Angianthus drummondii</i>		<i>Angianthus drummondii</i> grows in grey or brown clay soils, ironstone on seasonally wet flats.	Highly Unlikely – not suitable habitat
<i>Babingtonia urbana</i>	Coastal Plain Babingtonia	Coastal Plain Babingtonia occurs in orange sand, brown loam, white sandy clay on low flats, winter-wet swamps	Highly Unlikely – not suitable habitat
<i>Cyathochaeta teretifolia</i>		<i>Cyathochaeta teretifolia</i> occurs in grey sand, sandy clay on swamps, creek edges.	Highly Unlikely – not clay soils

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Dillwynia dillwynioides</i>		<i>Dillwynia dillwynioides</i> occurs in sandy soils in winter-wet depressions.	Unlikely – no intact vegetation in winter wet areas
<i>Eryngium pinnatifidum</i> subsp. <i>Palustre</i> (G.J. Keighery 13459)		<i>Eryngium pinnatifidum</i> subsp. <i>Palustre</i> is recorded from a winter wet claypan, water to 20 cm deep in grey-brown clay (Western Australian Herbarium, 1989)	Unlikely – no intact vegetation in winter wet areas
<i>Jacksonia gracillima</i>		<i>Jacksonia gracillima</i> occurs in grey and brown well-drained sand.	Possible
<i>Meionectes tenuifolia</i>		<i>Meionectes tenuifolia</i> occurs on swamp margins on seasonally wet poorly drained flats or granite flats in shallow soils.	Highly Unlikely – the soils are not peaty
<i>Pithocarpa corymbulosa</i>		<i>Pithocarpa corymbulosa</i> occurs in gravelly or sandy loam amongst granite outcrops.	Unlikely – not swamp habitat
<i>Schoenus capillifolius</i>		<i>Schoenus capillifolius</i> grows in brown mud on claypans.	Highly Unlikely – no intact vegetation on claypans
<i>Schoenus pennisetis</i>		<i>Schoenus pennisetis</i> occurs in grey or peaty sand, sandy clay in swamps, winter-wet depressions.	Highly Unlikely – no intact vegetation in winter wet depressions
<i>Schoenus</i> sp. Waroona (G.J. Keighery 12235)		<i>Schoenus</i> sp. Waroona occurs in clay or sandy clay on winter-wet flats.	Unlikely – no intact vegetation in winter wet depressions
<i>Stylidium aceratum</i>		<i>Stylidium aceratum</i> occurs in sandy soils in swamp heathland.	Unlikely – not suitable habitat
<i>Stylidium paludicola</i>		<i>Stylidium paludicola</i> prefers peaty sand over clay in winter wet habitats in Marri and Melaleuca woodland, Melaleuca shrubland.	Highly Unlikely – no intact vegetation in winter wet depressions
Priority 4 Species			
<i>Aponogeton hexatepalus</i>	Stalked Water Ribbons	Stalked Water Ribbons grow in freshwater: ponds, rivers, claypans	No – no intact vegetation in winter wet depressions
<i>Dodonea hackettiana</i>	Hackett's Hopbush	Hackett's Hopbush occurs in sand with outcropping limestone.	No – no outcropping limestone

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Drosera occidentalis</i>	Western Sundew	The Western Sundew occurs in sandy and clayey soils in swamps and wet depressions.	Highly Unlikely – not suitable habitat
<i>Stylidium ireneae</i>		<i>Stylidium ireneae</i> occurs in sandy loam in valleys near creek lines, woodland, often with <i>Agonis</i> .	Highly Unlikely – not suitable habitat
<i>Stylidium longitubum</i>	Jumping Jacks	Jumping Jacks prefer sandy clay, clay in seasonal wetlands.	Highly Unlikely – not suitable habitat
<i>Stylidium striatum</i>	Fan-leaved Triggerplant	The Fan-leaved Triggerplant grows in brown clay loam over laterite on hillslopes in Jarrah/Marri forest, Wandoo woodland.	Unlikely – not lateritic habitat
<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i>		<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i> prefers sand, sandy clay in winter-wet depressions.	Highly Unlikely – not suitable habitat

* sourced from Florabase (DBCA, 2017) and SPRAT Database (DoEE, 2016) as well as the DBCA database searches unless otherwise denoted

4.2 TEC and PEC Database Searches

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database was conducted within a radius of 5km around the site (15-0321EC) (Appendix 5). Ten TECs and seven PECs at State level were identified in the database search. There are five State listed PECs are listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) as TECs. The communities identified in the database searches are outlined in Table 4.

Table 4: Threatened and Priority Ecological Communities likely to occur within 5km of the Site

Ecological Community	Description	Conservation Status WA	Status under the EPBC Act
Mound Springs SCP	Communities of Tumulus Springs (Organic Mound Springs, Swan Coastal Plain)	Critically Endangered	Endangered
SCP3a	<i>Corymbia calophylla</i> - <i>Kingia australis</i> woodlands on heavy soils, Swan Coastal Plain (floristic community type 3a as originally described in Gibson et al. (1994))	Critically Endangered	Endangered as part of Claypans TEC
SCP3c	<i>Corymbia calophylla</i> - <i>Xanthorrhoea preissii</i> woodlands and shrublands, Swan Coastal Plain (floristic community type 3c as originally described in in Gibson et al. (1994))	Critically Endangered	Endangered as part of Claypans TEC
SCP19b	Woodlands over sedgeland in Holocene dune swales of the southern Swan Coastal Plain (original description; Gibson et al. (1994).	Critically Endangered	Endangered
SCP02	Southern wet shrublands, Swan Coastal Plain (floristic community type 2 as originally described in Gibson et al. (1994))	Endangered	
SCP10a	Shrublands on dry clay flats (floristic community type 10a as originally described in Gibson et al. (1994))	Endangered	Critically Endangered as Claypans TEC

Ecological Community	Description	Conservation Status WA	Status under the EPBC Act
SCP20b	<i>Banksia attenuata</i> and/or <i>Eucalyptus marginata</i> woodlands of the eastern side of the Swan Coastal Plain (floristic community type 20b as originally described in Gibson et al. (1994))	Endangered	Endangered as part of the Banksia WL SCP
SCP26a	<i>Melaleuca huegelii</i> - <i>Melaleuca systema</i> shrublands on limestone ridges (floristic community type 26a as originally described in Gibson et al. (1994))	Endangered

Tuart woodlands	Tuart (<i>Eucalyptus gomphocephala</i>) woodlands and forests of the Swan Coastal Plain	Priority 3	Critically Endangered

4.3 Flora

A total of 109 plant species were recorded on the site (Appendix 6). The total consisted of 91 native and 18 introduced species (16.5%)

No Threatened or Priority plant species were recorded on the site.

The plant Families with the highest representation of species were the Fabaceae (Pea and Wattle family – 12 species, including 8 native and 4 introduced), Asteraceae (Daisy family - 9 species, 6 native and 3 introduced), Myrtaceae (Myrtle family – 8 species, all native), Proteaceae (Banksia family – 8 species, all native) and the Poaceae (Grass family – 8 species, 2 native and 6 introduced).

Species richness in the five quadrats ranged from 9-33 species. Greater species richness was recorded in the vegetation in Good condition or better (average 34.5 species) compared to the vegetation in Degraded to Completely Degraded condition (average 13.0 species). The number of species per 10m x 10m quadrat in Good condition or better is low to moderate for Banksia woodlands and may reflect the clearing of the site in the 1970s. Quadrat Data are provided in Appendix 6.

4.4 Vegetation

4.4.1 Vegetation Complex

Vegetation Complexes are a broad level of vegetation description which is based on the underlying geomorphology and rainfall (Hedde *et al.*, 1980). The vegetation over most of the site is part of the Bassendean Complex – Central and South which is described as:

Bassendean Complex-Central and South - Vegetation ranges from woodland of Jarrah (*Eucalyptus marginata*) – Sheoak (*Allocasuarina fraseriana*) – Banksia (*Banksia* spp.) to woodland of Paperbark (*Melaleuca* spp.), and sedgeland on moister sites (Hedde *et al.*, 1980).

4.4.2 Vegetation Type

Vegetation complexes are a very broad mapping unit used to map the vegetation at the scale of the Swan Coastal Plain for example. For small scale sites, such as the survey area, vegetation mapping can be further refined by using vegetation types which are based on the composition and structure of the dominant species rather than based on geomorphology.

Three native vegetation types were described and mapped on the site. The vegetation types are described in Table 5 and mapped in Figure 3.

In addition, the western half of the site contained small stands of trees or isolated trees and shrubs in the paddock which are not technically vegetation types but are nonetheless native vegetation. These included three Sheoak trees (*Allocasuarina fraseriana*), one Flooded Gum tree (*Eucalyptus rudis*) and many scattered Paperbark shrubs (*Melaleuca preissiana*) (Plate 7).

Plate 7: Scattered Paperbark shrubs on the western cleared half of the site.

Table 5: Vegetation Types on the Site

Vegetation Type	Description	Photograph
<p>BaBmKg <i>Banksia attenuata</i>/<i>B. menziesii</i>/<i>Kunzea glabrescens</i> Low Woodland over <i>Hibbertia hypericoides</i> Open to Closed Low Heath</p>	<p>This is the main vegetation type that occurs over most of the eastern half of the site. The three upper canopy species <i>Banksia attenuata</i>, <i>B. menziesii</i> and <i>Kunzea glabrescens</i> are around 4-5m high and vary in respective density with total canopy cover being 20-40%. Some <i>Banksia ilicifolia</i> and <i>Eucalyptus todtiana</i> trees occur at the western end of the BaBmKg on slightly lower ground but the understorey composition is similar to that on higher ground. The understorey was mostly <1m with a few emergent taller shrubs like <i>Adenanthos cygnorum</i> and <i>Jacksonia sternbergiana</i>. Typical understorey species included <i>Hibbertia hypericoides</i>, <i>Morelotia octandra</i>, <i>Corynotheca micrantha</i>, <i>Dianella revoluta</i> var. <i>divaricata</i>, <i>Desmocladius flexuosus</i>, <i>Trachymene pilosa</i>, <i>Bossiaea eriocarpa</i> and <i>Conostylis aculeata</i>.</p> <p>The soils were orange-brown sand.</p> <p>Quadrat KR1, 2 and 3 were representative of this vegetation type.</p> <p>Total area = 6.62ha</p>	

Vegetation Type	Description	Photograph
<p>Mt <i>Melaleuca teretifolia</i> Shrubland over weeds</p>	<p>A strip of <i>Melaleuca teretifolia</i> Shrubland occurs on a man-made bund close to the northwestern boundary of the site. The bund is likely to have been created when the drain to the north was constructed prior to 1953. The <i>M. teretifolia</i> shrubs are 1.5-2m high and around 25% cover over a weedy understorey with Perennial Veldtgrass (<i>Ehrharta calycina</i>) the most common species. Pigface (<i>Carpobrotus edulis</i>) was also abundant.</p> <p>The soils on the bund were blackish loamy sand, indicative of the low-lying soil type on the western half of the site.</p> <p>Quadrat KR4 was representative of this vegetation type.</p> <p>Total area = 0.33ha</p>	
<p>Kg <i>Kunzea glabrescens/ Adenanthos cygnorum</i> Tall Shrubland over weeds</p>	<p>This vegetation type occurred along the southeastern boundary of the site which had been cleared previously as part of the sand mining operations on the Lot to the south. The vegetation is regrowth and consists of Spearwood (<i>Kunzea glabrescens</i>) and Woolly Bush (<i>Adenanthos cygnorum</i>) shrubs to 3.5m and overall 10% cover over a mix of native and introduced herbs and low shrubs. Common weeds include Perennial Veldtgrass, Pigface, Ursinia (<i>Ursinia anthemoides</i>) and Blowfly Grass (<i>Briza maxima</i>).</p> <p>The soils were dark grey sand.</p> <p>Quadrat KR5 was representative of this vegetation type.</p> <p>Total area = 0.67ha</p>	

4.4.3 Floristic Community Type

Floristic Community Types (FCT) are based on the whole floristic composition of the vegetation rather than being determined by soil type and geomorphology (Vegetation Complex) or the nature of the dominant species (Vegetation Types).

The FCT on the site was determined using the spreadsheet method which compares the species in the quadrats to the species found in each FCT (Table 12 in Gibson *et al.* 1994).

Using this method, the BaBmKg vegetation type had close similarities to FCT21a 'Central *Banksia attenuata* – *Eucalyptus marginata*' and FCT23a 'Central *Banksia attenuata* – *B. menziesii* woodlands'. Both FCTs occur primarily on Bassendean Sands such as on the site. The absence of any *Eucalyptus marginata* on the site steers the conclusion that the BaBmKg vegetation type is more likely to be FCT23a as *Eucalyptus marginata* is rare in this FCT compared to being usually present in FCT21a.

The Mt and Kg vegetation types are too degraded to assign to a FCT.

4.4.4 Vegetation Condition

The condition of the vegetation was assessed according to the system of Keighery as described in Bush Forever (Government of Western Australia, 2000) (Table 6).

Table 6: Vegetation Condition Rating Scale

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate to it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

The condition of the vegetation in the western half was all rated as Degraded to Completely Degraded (Figure 4). The condition of the vegetation in the eastern half improved from Good along the western margin of the BaBmKg vegetation type to Excellent at the eastern end. The areas rated as Good

contained abundant weedy grasses in the understorey (Plate 8). The north-east area was rated as Good.

Plate 8: Good condition BaBmKg vegetation type with abundant Veldtgrass.

4.5 Conservation Significance of Flora and Vegetation

4.5.1 Flora

No Threatened or Priority flora species were recorded on the site.

4.5.2 Vegetation

4.5.2.1 Vegetation Complex

The vegetation on the site is part of the Bassendean - Central and South Vegetation Complex. There is approximately 23,509ha (26.87%) of the pre-European extent of the Bassendean Complex-Central and South remaining on the Swan Coastal Plain portion of the Perth Metropolitan Region (DBCA, 2018). There is 1,625ha in secure reserves which is 1.86% of the original extent of the complex (DBCA, 2018).

The percentage retention is above EPA's target for minimum 10% retention of vegetation complexes in the Perth and Peel Region Constrained Areas. The area in protection is below the 10% minimum criteria for vegetation complexes.

4.5.2.2 Threatened and Priority Ecological Communities

None of the vegetation in Degraded to Completely Degraded condition is able to be assessed as a FCT. Therefore, the Mt and Kg vegetation types are not considered a Threatened Ecological Community (TEC) or Priority Ecological Community (PEC).

The Banksia woodland in Good to Excellent condition at the eastern half of the site is assessed as being FCT 23a, which itself is not a TEC or PEC. However, FCT 23a is part of a broader ecological community called the Banksia Woodlands of the Swan Coastal Plain which is listed as a PEC at State level and TEC

under the Commonwealth EPBC Act. An assessment of the Banksia woodland on the site follows with respect to the Banksia Woodland TEC.

The *Approved Conservation Advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community* (Commonwealth of Australia, 2016) (Conservation Advice) describes the Banksia Woodland TEC as:

The ecological community is a woodland associated with the Swan Coastal Plain of southwest Western Australia. A key diagnostic feature is a prominent tree layer of Banksia, with scattered eucalypts and other tree species often present among or emerging above the Banksia canopy. The understorey is a species rich mix of sclerophyllous shrubs, graminoids and forbs. The ecological community is characterised by a high endemism and considerable localised variation in species composition across its range (Commonwealth of Australia, 2016).

Table 7 assesses the BaBmKg vegetation type on the site against the Banksia Woodland TEC criteria contained in the Conservation Advice.

In summary, all of the BaBmKg vegetation type in Good condition or better is assessed as meeting the requirements to be the Banksia Woodland TEC. The patch is also continuous with similar vegetation on the eastern end of Lot 4 to the south. The size of the Banksia Woodland TEC is around 4.49ha.

Table 7: Assessment of the Banksia Woodland of the Swan Coastal Plain TEC.

Feature	Characteristic	Vegetation Type
		BaBmKg
Banksia Species	<p>The patch must include at least one of the following diagnostic species:</p> <ul style="list-style-type: none"> • <i>Banksia attenuata</i> (Candlestick Banksia) • <i>Banksia menziesii</i> (Firewood Banksia) • <i>Banksia prionotes</i> (Acorn Banksia) • <i>Banksia ilicifolia</i> (Holly-Leaved Banksia). 	<i>Banksia attenuata</i> and <i>B. menziesii</i> common.
Vegetation Structure	<ul style="list-style-type: none"> • A distinctive upper sclerophyllous layer of low trees (occasionally large shrubs more than 2 m tall), typically dominated or codominated³ by one or more of the <i>Banksia</i> species (<i>B. attenuata</i>, <i>B. menziesii</i>, <i>B. ilicifolia</i>, <i>B. prionotes</i>); • An emergent tree layer of medium or tall (>10 m) height <i>Eucalyptus</i> or <i>Allocasuarina</i> (Sheoak) species may sometimes be present above the <i>Banksia</i> canopy. • An understory that is often highly species-rich consists of: <ul style="list-style-type: none"> – A layer of sclerophyllous shrubs of various heights; and, – A herbaceous ground layer of cord rushes, sedges and perennial and ephemeral forbs, that sometimes includes grasses. The development of a ground layer may vary depending on the density of the shrub layer and disturbance history. 	<ul style="list-style-type: none"> • Banksia trees form a distinctive upper layer of low trees with native Spearwood (<i>Kunzea glabrescens</i>). • No emergent trees. • Understorey contains a low to moderate diversity of native species including shrubs, sedges and ephemerals.
Vegetation Condition	An area of Banksia woodland needs to be at least in Good condition to be considered the TEC.	Vegetation ranges from Degraded for the northern part to Excellent in the south-east corner. Overall condition rated as Very Good.
Patch Size	<p>The Banksia woodland TEC needs to meet a minimum ‘patch’ size depending on its condition to qualify as the TEC, as follows:</p> <ul style="list-style-type: none"> • ‘Pristine’ – no minimum patch size • ‘Excellent’ – 0.5ha • ‘Very Good’ – 1ha • ‘Good’ – 2ha 	<p>Total area of BaBmKg vegetation type woodland in Good condition or better is 4.49ha. The south-east part of the site is continuous with Banksia woodland at the eastern end of Lot 4 to the south.</p> <p>The area of BaBmKg in Degraded condition at the northern part of the site Total area of Banksia patch is 2.1ha.</p> <p>The area of Degraded BaBm Kg is separated from the larger area by a wide cleared firebreak and is not considered part of the same patch.</p> <p>The patch of BaBmKg in overall Very Good condition is above the 1ha minimum to meet the requirements of the TEC.</p> <p>The patch of BaBmKg in Degraded condition is below the minimum condition category to be the TEC</p>
Conclusion		Most of the BaBmKg vegetation type meets the requirements to be the Banksia Woodland TEC.

4.5.2.3 Banksia Woodland Regional Context

To assess the regional context of the Banksia Woodland on the site compared to the amount present in nearby secure reserves an analysis of Bush Forever sites and other reserves within 10km has been undertaken. Banksia Woodland TEC is represented in reserves as shown in Table 8. The amount of Banksia Woodland within 10km of the site is 3,369.5ha. The amount of Banksia Woodland on the site (4.49ha) represents 0.133% of the amount within 10km of the site.

Table 8: Banksia Woodland TEC in Surrounding Reserves

Site Number	Reserve Name	Inferred Area of Banksia Woodland (ha)	FCT	Distance to Site (km)
348	Modong Nature Reserve and adjacent bushland, Oakford	Upland – 130.1	21a, 23a	1.4
353	Banksia Road Nature Reserve	Upland – 30.4	22, 23a	2.0
273	Casuarina Prison Bushland	Upland – 115.6	21c, 23a	2.22
347	Wandi Nature Reserve and Anketell Road Bushland, Wandi/Oakford	Upland – 370.1	22, 23a	3.8
270	Sandy Lake and Adjacent Bushland	Upland – 53.7	21a, 21c, 22, 23a	4.3
352	Cardup Nature Reserve and Adjacent Bushland, Cardup	Upland – 86.2	20b, 21a	6.7
349	Leda and Adjacent Bushland, Leda	Upland – 849.9	21a, 28	7.2
368	Lowlands Bushland – Eastern Block, Peel Estate	Upland – 1,017.3	21a, 21c, 23a	7.4
345	Forrestdale Lake and Adjacent Bushland, Forrestdale	Upland – 93.5	21a, 21c	7.4
321	Brickwood Reserve and Adjacent Bushland, Byford	Upland – 27.2	20b	7.9
344	Denis de Young Reserve and Gibbs Road Swamp Bushland, Banjup/Forrestdale	Upland – 265.7	21c, 22	8.2
Total		3,369.5		

4.5.2.4 Banksia Woodland Significance of Impact

The impact of clearing the Banksia Woodland TEC has been analysed in accordance with the *EPBC Act Policy Statement 1.1 Significant Impact Guidelines* (SEWPaC, 2006). The significance of an impact, according to the Significant Impact Guidelines depends on the sensitivity, value and quality of the environment and the intensity, duration, magnitude and geographic extent of the impacts. The significant impact criteria for listed flora and fauna species and ecological communities depend on the category of listing, eg. Endangered, Vulnerable or Migratory. The significant impact guidelines pertinent to the Banksia Woodland TEC and analysis of proposed clearing for sand extraction has been undertaken.

1. *Reduce the extent of an ecological community.*

Clearing of the site for sand extraction will result in the removal of 4.49 ha of the Banksia Woodland TEC. Contextually there are more than 3,300ha of Banksia Woodland in secure reserves in Bush Forever sites within 10km. The proposed clearing is around 0.13% of the area that is in secure reserves nearby.

Impact: Known

2. *Fragment or increase fragmentation of an ecological community, for example by clearing vegetation for roads or transmission lines.*

The vegetation on site represents an isolated patch of a fragmented TEC, as a result of surrounding rural land uses. The site is not considered to be an important linkage across an already fragmented landscape

Impact: Unlikely

3. *Adversely affect habitat critical to the survival of an ecological community.*

The TEC on the site meets the key diagnostic characteristics and condition thresholds and therefore is considered to be critical habitat, however there are 3,300ha of larger, consolidated patches of TEC that are better quality examples of the TEC within 10km that have a high level of protection.

Impact: Unlikely

4. *Modify or destroy abiotic (non-living) factors (such as water, nutrients, or soil) necessary for an ecological community's survival, including reduction of groundwater levels, or substantial alteration of surface water drainage patterns.*

Clearing and sand mining on the site will require hydrological management procedures to be included as part of an application for extractive industry license such that the pre-development flows are not impacted. Therefore there will be no hydrological impact on nearby ecological communities.

Impact: Unlikely

5. *Cause a substantial change in the species composition of an occurrence of an ecological community, including causing a decline or loss of functionally important species, for example through regular burning or flora or fauna harvesting.*

The area of TEC that will be directly impacted will not impact on the composition of any additional areas of TEC off site. Offsite impacts such as dieback and changes to groundwater will be mitigated by procedures as required under an extractive industry licence and can be managed to mitigate the risk.

Impact: Unlikely

6. *Cause a substantial reduction in the quality or integrity of an occurrence of an ecological community, including, but not limited to:*

- *assisting invasive species, that are harmful to the listed ecological community, to become established, or*

- *causing regular mobilisation of fertilisers, herbicides or other chemicals or pollutants into the ecological community which kill or inhibit the growth of species in the ecological community.*

The clearing of the site will not increase any artificial pollutants that may impact on surrounding areas or other occurrences of the TEC. Weed spread from the clearing of the site is not likely to impact on other occurrences of the TEC.

Impact: Unlikely

7. Interfere with the recovery of an ecological community.

Section 5 of the Approved Conservation Advice discusses priority research and conservation actions and states: *It is more practical and cost-effective to maintain existing high quality remnants than to allow their degradation and then attempt rehabilitation of these or other areas.* The site is not considered a high quality remnant as it is small and relatively fragmented from other areas of native vegetation. Clearing would not interfere with the recovery of the TEC.

Impact: Unlikely

5 SUMMARY AND CONCLUSIONS

The 2021 Detailed Flora and Vegetation Survey of Lot 5 King Road, Oldbury resulted in the following findings:

- The site contains around 7.6ha of native vegetation, predominantly on the eastern half as well as scattered trees within the cleared paddock in the western half;
- The main vegetation type is a *Banksia attenuata*/*B. menziesii*/*Kunzea glabrescens* Low Woodland on dry, sandy soils in the eastern half;
- The condition of the Banksia woodland ranges from Degraded at the northern end to Excellent at the south-east end;
- The areas of intact native vegetation are representative of the Bassendean– Central and South vegetation complex. The percentage retention is above EPA’s target for minimum 10% retention of vegetation complexes in the Perth and Peel Region Constrained Areas. The area in protection is below the 10% minimum criteria for vegetation complexes.
- The Banksia Woodland vegetation was assessed as being representative of FCT23a which is not a Threatened or Priority Ecological Community at State or Commonwealth level;
- The areas of Banksia Woodlands in Good condition or better were assessed as meeting the definition of the Banksia Woodlands of the Swan Coastal Plain ecological community which is a PEC at State level and a TEC under the Commonwealth EPBC Act. A total of 4.49ha of the Banksia Woodland TEC occurs on the site;
- A total of 109 plant species were recorded on the site, including 91 native and 18 introduced species;
- No Threatened or Priority plant species were recorded on the site;
- Any proposal to clear the native vegetation on the site will require a clearing permit at State level unless an exemption applies which is unlikely for a sand mine; and
- A proposal to clear the Banksia woodland TEC area will require a Referral under the Commonwealth EPBC Act, however is considered not likely to have a significant impact as it is a small impacted area of TEC (4.49ha) in the context of around 3,300ha of high quality Banksia Woodland in nearby reserves.

- Vegetation Condition**
(SOURCE: Bush Forever, Govt. of W.A., 2000)
- P - Pristine**
Pristine or nearly so, no obvious signs of disturbance.
 - Ex - Excellent**
Vegetation structure intact, disturbance affecting individual species and weeds are non aggressive species.
 - VG - Very Good**
Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
 - G - Good**
Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
 - D - Degraded**
Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
 - CD - Completely Degraded**
The structure of the vegetation is no longer intact and the areas is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora composing weed or crop species with isolated native trees or shrubs.
 - CI - Cleared**
No native vegetation remaining.

Conservation Codes

T - Rare or likely to become extinct
X - Presumed extinct
IA - Protected under international agreement
S - Other specially protected fauna
1 - Priority 1
2 - Priority 2
3 - Priority 3
4 - Priority 4
5 - Priority 5

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

APPENDIX 3

Protected Matters Search Tool Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 30-Nov-2021

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar)	2
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	2
Listed Threatened Species:	23
Listed Migratory Species:	9

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	13
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	5
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands) [\[Resource Information \]](#)

Ramsar Site Name	Proximity
Forrestdale and thomsons lakes	Within 10km of Ramsar site
Peel-yalgorup system	30 - 40km upstream from Ramsar site

Listed Threatened Ecological Communities [\[Resource Information \]](#)

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community may occur within area

Listed Threatened Species [\[Resource Information \]](#)

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Number is the current name ID.

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018*.

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of ‘Specially Protected Fauna’ listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be “*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be “*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be “*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of ≤ 100 ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤ 10 occurrences or a total area of ≤ 200 ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

APPENDIX 6
Flora Species List

Lot 5 King Road Species List

* - non-native

GYMNOSPERMS

CYCADACEAE

Macrozamia riedlei

MONOCOTYLEDONS

ANACARDIACEAE

Lyginia barbata

ASPARAGACEAE

Laxmannia squarrosa

Lomandra caespitosa

Lomandra hermaphrodita

Lomandra preissii

Sowerbaea laxiflora

Thysanotus patersonii

COLCHICACEAE

Burchardia congesta

CYPERACEAE

Chaetophora curvifolia

Isolepis marginata

Lepidosperma scabrum

Morelotia octandra

Schoenus latitans

DASYPOGONACEAE

Dasypogon bromeliifolius

HAEMODORACEAE

Anigozanthos humilis

Anigozanthos manglesii

Conostylis aculeata

Conostylis juncea

Phlebocarya ciliata

HEMEROCALLIDACEAE

Arnocrinum preissii

Chamaescilla corymbosa

Corynotheca micrantha

Dianella revoluta var. *divaricata*

Tricoryne elatior

IRIDACEAE

**Gladiolus caryophyllaceus*

Patersonia occidentalis

**Romulea rosea*

ORCHIDACEAE

Caladenia flava

Microtis media subsp. *media*

Pterostylis barbata

Pterostylis ?vittata

Pyrorchis nigricans

Thelymitra macrophylla

POACEAE

Amphipogon turbinatus

Austrostipa flavescens

**Avena fatua*

**Briza maxima*

**Bromus diandrus*

**Ehrharta calycina*

**Lolium perenne*

**Vulpia* sp

RESTIONACEAE

Desmocladus flexuosus

XANTHORRHOEACEAE

Xanthorrhoea preissii

DICOTYLEDONS

AIZOACEAE

**Carpobrotus edulis*

APIACEAE

Xanthosia huegelii

ARALIACEAE

Trachymene pilosa

ASTERACEAE

Gnephosis drummondii

Hyalosperma cotula

**Hypochoeris glabra*

Millotia myosotidifolia

Podolepis gracilis
Podotheca gnaphalioides
Siloxerus humifusus
**Taraxacum officinale*
**Ursinia anthemoides*

CASUARINACEAE
Allocasuarina fraseriana
Allocasuarina humilis

CRASSULACEAE
Crassula colorata

DILLENACEAE
Hibbertia hypericoides
Hibbertia racemosa

DROSERACEAE
Drosera erythrorhiza
Drosera glanduligera
Drosera menziesii

ERICACEAE
Conostephium pendulum
Styphelia conostephioides
Styphelia propinqua

FABACEAE
Acacia huegelii
**Acacia longifolia*
Acacia stenoptera
Bossiaea eriocarpa
Daviesia triflora
Gompholobium tomentosum
Hovea trisperma
Jacksonia furcellata
Jacksonia sternbergiana
**Lupinus cosentinii*
**Lupinus luteus*
**Ornithopus compressus*

GERANIACEAE
**Pelargonium capitatum*

GOODENIACEAE
Dampiera linearis
Lechenaultia floribunda

LAMIACEAE
Hemiandra pungens

LOGANIACEAE
Phyllangium paradoxum

MACARTHURACEAE
Macarthuria australis

MONTIACEAE
Calandrinia corrigioloides

MYRTACEAE
Calytrix fraseri
Eucalyptus rudis
Eucalyptus todtiana
Kunzea glabrescens
Melaleuca preissiana
Melaleuca teretifolia
Scholtzia involucrata
Verticordia densiflora

PHYLLANTHACEAE
Poranthera microphylla

PRIMULACEAE
**Lysimachia arvensis*

PROTEACEAE
Adenanthos cygnorum
Banksia attenuata
Banksia ilicifolia
Banksia menziesii
Persoonia saccata
Petrophile linearis
Stirlingia latifolia
Synaphea spinulosa

RUTACEAE
Cyanothamnus ramosus
Philothea spicata

STYLIDIACEAE
Stylidium piliferum
Stylidium repens

VIOLACEAE
Hybanthus calycinus

APPENDIX 7

Quadrat Data

QUADRAT KR1

50 397412 E 6432167 N

Vegetation: *Banksia attenuata*/*B. menziesii*/*Kunzea glabrescens*
 Low Woodland over *Hibbertia hypericoides* Open Low Heath

Condition: Good

Soil Type: Orange-brown sand

Landform: Flat

Date: 7 October 2021

Recorder: P. van der Moezel
