# 1. Introduction

## 1.1 Project background

Murchison Hydrogen Renewables Pty Ltd (Murchison Hydrogen Renewables) is developing the Murchison Hydrogen Renewables Project (the Project), which is a planned 5.4 GW Power-to-X project that combines onshore wind and solar energy to produce 100% green ammonia. The Project site is located 20 km north of Kalbarri entirely within the Murchison Pastoral Lease (registered number N050525) (Figure 2-1).

Murchison Hydrogen Renewables expects that the Project will require assessment under Part IV of the *Environmental Protection Act 1986* (EP Act) and has commenced pre-referral discussions with the Environmental Protection Authority (EPA) regarding the environmental assessment process. Prior to formal referral of the Project to the EPA Murchison Hydrogen Renewables proposes to undertake a minor initial geotechnical investigation program.

### 1.1.1 Development Envelope

To support the development of the Project, GHD proposes to undertake a geotechnical investigation across the Development Envelope (DE) to further understand the varying soil systems. The geotechnical works will consist of up to 55 geotechnical test pits, located within or in close proximity to pre-cleared tracks that already exist to minimise disturbance to the native vegetation.

A DE of 79,963 ha has been defined, within which all of the test pits, boreholes and access tracks will be located (Figure 2-2). The test sites to be disturbed are approximately 30 m by 30 m. Where possible, pits and boreholes will be located on existing cleared areas. The total clearing area will be less than 5 ha.

## 1.2 Purpose of this report

The purpose of this Native Vegetation Clearing Permit (NVCP) supporting document is to inform the Department of Water and Environmental Regulation (DWER) of the ten clearing principles assessment outcome for the geotechnical works, and potential impacts that may result from the proposed geotechnical works. This document has been prepared in support of an application for a NVCP (purpose) under Section 51E of Part V of the EP Act.

This document includes:

- An overview of works required and description of clearing activities to be undertaken (Section 2)
- An overview of existing environment (Section 3)
- An assessment of potential impacts identified (Section 4)
- Environmental management measures to be implemented to minimise clearing impacts (Section 5)
- An assessment against the Ten Clearing Principles, as defined in Schedule 5 of the EP Act (Section 6)
- Identification of other environmental and heritage approvals applicable to the proposed works (Section 7)
- Assessment whether offsets are applicable to the proposed works (Section 8)

## 1.3 Scope and limitations

*This report: has been prepared by GHD for Murchison Hydrogen Renewables Pty Ltd as trustee for Murchison Hydrogen Renewables Trust and may only be used and relied on by Murchison Hydrogen Renewables Pty Ltd as trustee for Murchison Hydrogen Renewables Trust for the purpose agreed between GHD and Murchison Hydrogen Renewables Pty Ltd as trustee for Murchison Hydrogen Renewables Trust as set out in section 1.2 of this report.*

*GHD otherwise disclaims responsibility to any person other than Murchison Hydrogen Renewables Pty Ltd as trustee for Murchison Hydrogen Renewables Trust arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.*

*The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.*

*The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.*

*The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.*

## **2. Description of clearing activities**

### **2.1 Boreholes and test pits**

Up to 55 geotechnical test pits are proposed to be constructed within the DE. For the test pits, a clearing area of 30 m by 30 m is required. Where possible, pits and boreholes will be located entirely, or partially, on existing cleared areas. The proposed locations shown on Figure 2-3, are generally on existing tracks to minimise clearing requirements. However, should site conditions at the time of geotechnical investigations prevent the test sites from being constructed within the cleared areas e.g. due to water-logged tracks from rain, then the total clearing area would be up to 5 ha.

Figure 2-3 presents a total of 74 potential test sites that may be cleared. 74 test sites have been identified to provide flexibility to adjust the program either based on geotechnical conditions or should access restrictions prevent realisation of some sites. The 74 potential sites will not all be cleared. Clearing will be limited to a maximum of 55 sites.

Revision No. 0  
Date 22/12/2021

Regional location

**FIGURE 2-1**

### 3. Existing environment

#### 3.1 Climate

The Kalbarri area experiences a warm Mediterranean climate with mild, wet winters and warm, dry summers. Temperature data from the Kalbarri weather station indicates the mean maximum temperature ranges from 34.1 °C in February to 21.9 °C in July, and the area has an annual mean maximum temperature of 27.7 °C. Kalbarri receives little rainfall which falls predominantly from May through to August and the area has a mean annual rainfall of around 337.7 mm (BoM, 2021). The Bureau of Meteorology (BoM) Kalbarri Station (site number: 008251) is the nearest weather station to the DE with long term data.

Figure 3-1 presents the temperature and rainfall statistics from the Kalbarri weather station.

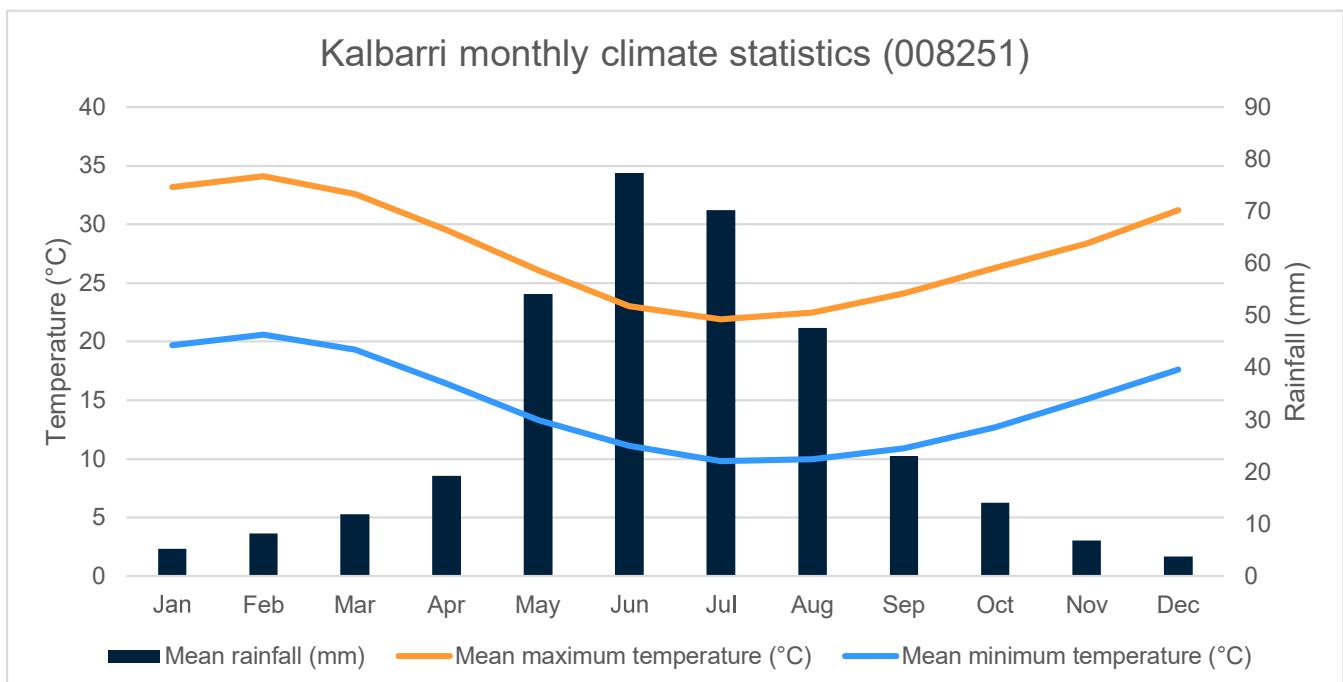

Figure 3-1 Kalbarri monthly climate statistics (BOM weather station: 008251)

#### 3.2 Land use

The DE is entirely within a Pastoral station that is used for grazing goats. Murchison Pastoral Lease (registered number N050525).

#### 3.3 Geology and soils

##### 3.3.1 Soils

The soil landscape changes from calcrete plateaux, mesas, hills and footslopes supporting annual grasslands, herbfields and degraded chenopod shrublands in the east of the DE. Through to elevated, undulating limestone plains with thin sand cover, sea cliffs and low hills supporting low heath, mallee shrublands and paper bark thickets in the western coastal section of the DE. Commonly found throughout the DE mid-region is undulating sand plains and occasional dunes supporting shrub heath and tree heath vegetation (GoWA 2021X).

### 3.3.2 Topography

Topography within the DE varies from low lying draining lines, to flats and up to higher elevated sandy dunes and limestone ridges. The limestone is rugged, reaching an elevation of greater than 150 m along the coastal areas in the western portion of the DE. Topography through the mid-region of the DE lies lower in the landscape, allowing for water to pool and infiltrate the ground. The topography again rises in the southeastern region of the DE, comparable to the height of the limestone ridge.

### 3.3.3 Acid sulfate soils

A review of Acid Sulfate Soil (ASS) risk mapping indicates ASS is not present in the DE, and therefore not present in the geotechnical investigation sites. The closest potential ASS site is along the Murchison River, which at its closest point, is approximately 5 km south of the DE. Given the presence of limestone throughout the DE the occurrence of any ASS is not expected.

## 3.4 Hydrology

Desktop searches of publicly available data layers identified the water resources present in the DE. These are detailed below in Table 1.

*Table 1 Water resources within the development envelope*

Aspect	Details	Results
Groundwater areas (GoWA 2021X)	Groundwater areas proclaimed under the Rights in Water and Irrigation Act, 1914.	Gascoyne Groundwater Area
Surface Water Areas	Surface water areas proclaimed under the RIWI Act	None present
Irrigation Districts (DWER-037)	Irrigation Districts proclaimed under the RIWI Act	None present
Rivers	Rivers proclaimed under the Rights in RIWI Act	None present
Public Drinking Water Source Areas	PDWSA is a collective term used for the description of Water Reserves, Catchment Areas and Underground Pollution Control Areas declared (gazetted) under the provisions of the <i>Metropolitan Water Supply, Sewage and Drainage Act 1909</i> (WA) or the <i>Country Areas Water Supply Act 1947</i> (WA)	None present, Kalbarri Water Reserve 8 km south of DE.
Waterways Management Areas	Areas proclaimed under the Waterway Conservation Act 1976 (WA). These are Albany waterways, Avon River, Wilson Inlet, Peel – Harvey estuaries and Leschenault Inlet.	None present

### 3.4.1 Groundwater

There are no PDWSAs within the DE; however, the Kalbarri Water Reserve is located approximately 8 km south of the DE. The closest investigation site is approximately 10 km from the PDWSA.

The DE is situated on the Proclaimed Gascoyne Groundwater Area under the RIWI Act (GoWA 2021X).

### 3.4.2 Surface water and drainage

No rivers, as recognised under the RIWI Act, intercept or are within the vicinity of the DE (GoWA 2021X). Additionally, no RIWI Act protected surface waters or management areas are found within 20 km of the DE.

### 3.4.3 Wetlands

No Internationally (Ramsar) or nationally important wetlands are located within the DE. The closest important wetland is the Murchison River (Lower Reaches) listed in the Directory of Important Wetlands in Australia (GoWA 2021X). This wetland is approximately 5 km south of the DE.

## 3.5 Flora and vegetation

### 3.5.1 Survey effort

A basic flora survey was undertaken by Senior Botanist Joel Collins and Senior Zoologist Glen Gaikhorst in Spring of 2021, from November 15 to November 19. The goal of this survey was to scope suitable sites for the geotechnical investigation, ensuring conservation significant flora would be avoided. The survey identified areas of existing clearing.

### 3.5.2 Regional biogeography

The DE predominantly lies within the Geraldton Sandplains IBRA bioregion and within the Geraldton Hills IBRA subregion. The Geraldton Sandplains bioregion comprises the central and northern Perth Basin, the Pinjarra Orogen, and the south end of the Carnarvon Basin. Outcrops of Jurassic siltstones and sandstones can be heavily lateralized. Extensive proteaceous heaths and scrub-heaths often with emergent mallees, *Banksia* and *Actinostrobus*, occur on an undulating, lateritic sandplain mantling Permian to Cretaceous strata. These heaths are rich in endemics. Sandplains are most extensive in the north and southeast where the region overlaps the edges of the Carnarvon Basin and Yilgarn Craton respectively. Extensive York gum and acacia woodlands occur on alluvial outwash plains associated with drainage and with valleys in the hill country. Areas of coastal aeolian sands and limestone support proteaceous heath and Acacia scrubs (Kendrick and Stanley 2001).

### 3.5.3 Broad vegetation mapping and extents

Broad scale (1:250,000) pre-European vegetation mapping of the area was completed by Beard (1975) at an association level. Mapping indicates eight vegetation associations are present within the DE:

- Shrublands tree-heath between sandhills; *Banksia ashbyi*, *Grevillea gordoniana*, *Acacia* spp., *Melaleuca* and mallee (association 368)
- Shrublands; heath on coastal limestone (association 402)
- Shrublands; scrub-heath on sandplain (association 380)
- Shrublands; *Acacia rostellifera* thicket (association 17)
- Shrublands; *Melaleuca cardiophylla* thicket (association 387)
- Shrublands; scrub-heath on coastal association, yellow sandplain (association 408)
- Mosaic: Shrublands; scrub-heath on coastal association on yellow sandplain / Shrublands; acacia patchy scrub (association 401)
- Shrublands; *Acacia ligulata* scrub-heath (association 403)

The pre-European mapping has been adapted and digitised by Shepherd et al. (2002). The extent of vegetation associations have been determined by the state-wide vegetation remaining extent calculations maintained by DBCA (latest update April 2019 – GoWA 2021b). As shown in Table 2, the proposed geotechnical investigation sites represent less than 0.001% of each vegetation association's calculated current extents at all scales (e.g. State, IBRA bioregion, IBRA subregion and LGA).

Table 2 Extent of pre-European vegetation associations within the DE (Beard 1975, GowA 2020)

Pre-European Vegetation Association	Scale	Pre-European extent (ha)	Current extent (ha)	Remaining (%)	%current extent in all DBCA managed land (proportion of current extent)	Area within the DE (ha)	% of current extent within the DE	Area within the investigation sites (ha)	% of current extent within the investigation sites

### 3.5.4 Vegetation types and condition

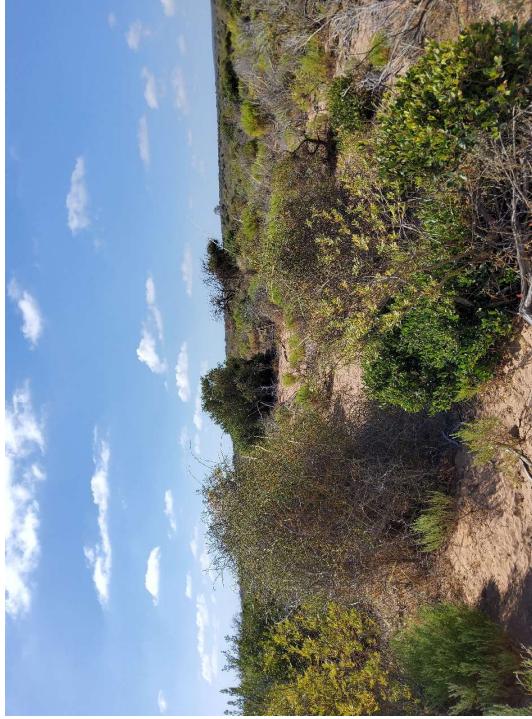

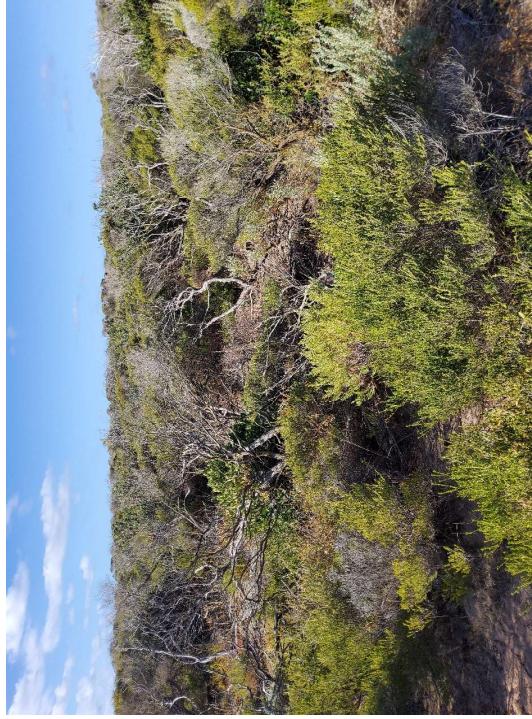

The preliminary survey of the geotechnical sites identified 20 vegetation types, primarily in Very Good to Excellent condition but with the cleared vegetation type being Completely Degraded. This cleared vegetation type is typical of the tracks where the geotechnical investigations will primarily occur. The vegetation in Very Good to Excellent condition is found several metres from the track clearing, the vegetation directly adjacent to the track is considered Good to Degraded due to the disturbance to the vegetation associated with the use of the track by the pastoralist.

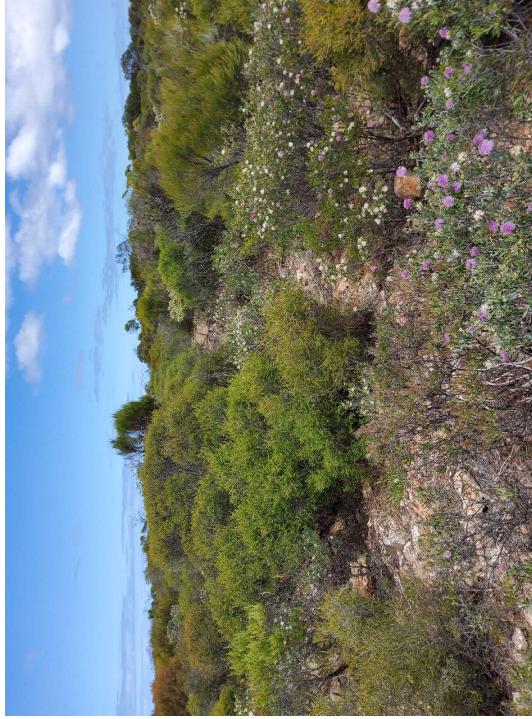

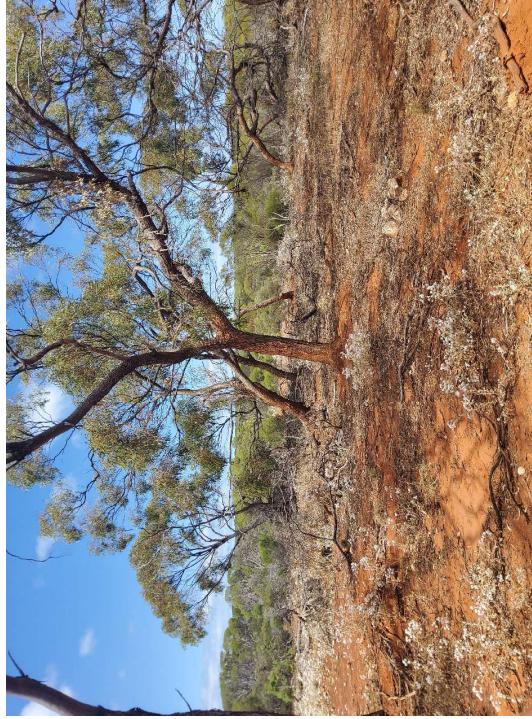

In total, 74 potential geotechnical test pit site have been identified. Of these, this Supporting Document proposed approval to clear up to 55 sites. All 55 sites are found adjacent to cleared tracks that currently exist within the pastoral station.

Table 3 Recorded vegetation types

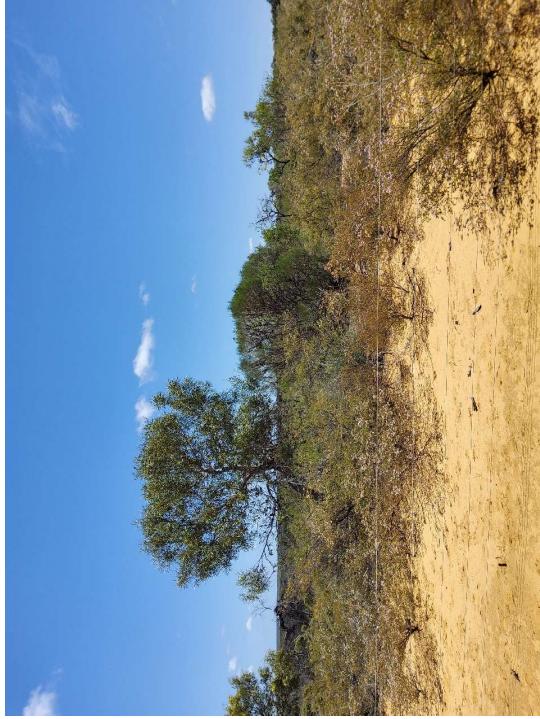

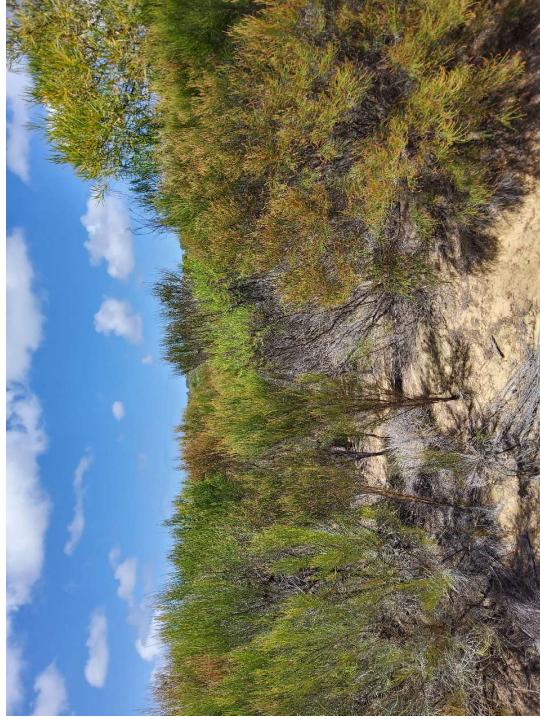

Vegetation Type	Vegetation Type Description	Condition and extent (ha)	Sites located in Vegetation Type (centroid of 30 m x 30 m proposed clearing)	Photograph

### 3.5.5 Significant ecological communities

The Threatened Ecological Community (TEC) / Priority Ecological Community (PEC) database did not identify any TEC/PECs occurring within the DE but did identify four PECs outside the DE, as follows and as shown in Figure 3-2:

- Kalbarri Ironstone Community (Priority 1): three known location, closest is approximately 15 km east of the southern region of the DE, other two known locations of this PEC are 25 km and 35 km southeast of the DE.
- Highway Land System (Priority 3): three known location, closest is approximately 15 km east of the northern region of the DE, other two known locations of this PEC are 22 km and 53 km east of the DE.
- Cullawarra Land System (Priority 3): known location is 45 km north west of the DE.
- Tamala Land System (Priority 3): known location is 46 km north west of the DE.

No TEC/PECs were recorded within the DE.

### 3.5.6 Flora diversity

The *NatureMap* (DBCA 2007-) database identified 1084 taxa previously recorded within a 40 km radius from the centre of the DE ( $114^{\circ} 10' 40''$  E,  $27^{\circ} 22' 43''$  S), forming a study area encompassing the DE and the surrounding area. This total comprised of 1020 native taxa and 64 naturalised (introduced) taxa. Dominant families recorded included Myrtaceae (179 taxa), Fabaceae (102 taxa) and Proteaceae (75 taxa).

The *NatureMap* database search is provided in Appendix A.

### 3.5.7 Conservation significant flora

The *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) Protected Matters Search Tool (PMST) (DAWE 2021) and *NatureMap* (DBCA 2007-) database identified the presence/potential presence of 105 conservation significant flora within a 40 km radius of the DE. This included:

- 10 Threatened taxa
- Nine Priority 1 taxa
- 43 Priority 2 taxa
- 29 Priority 3 taxa
- 14 Priority 4 taxa.

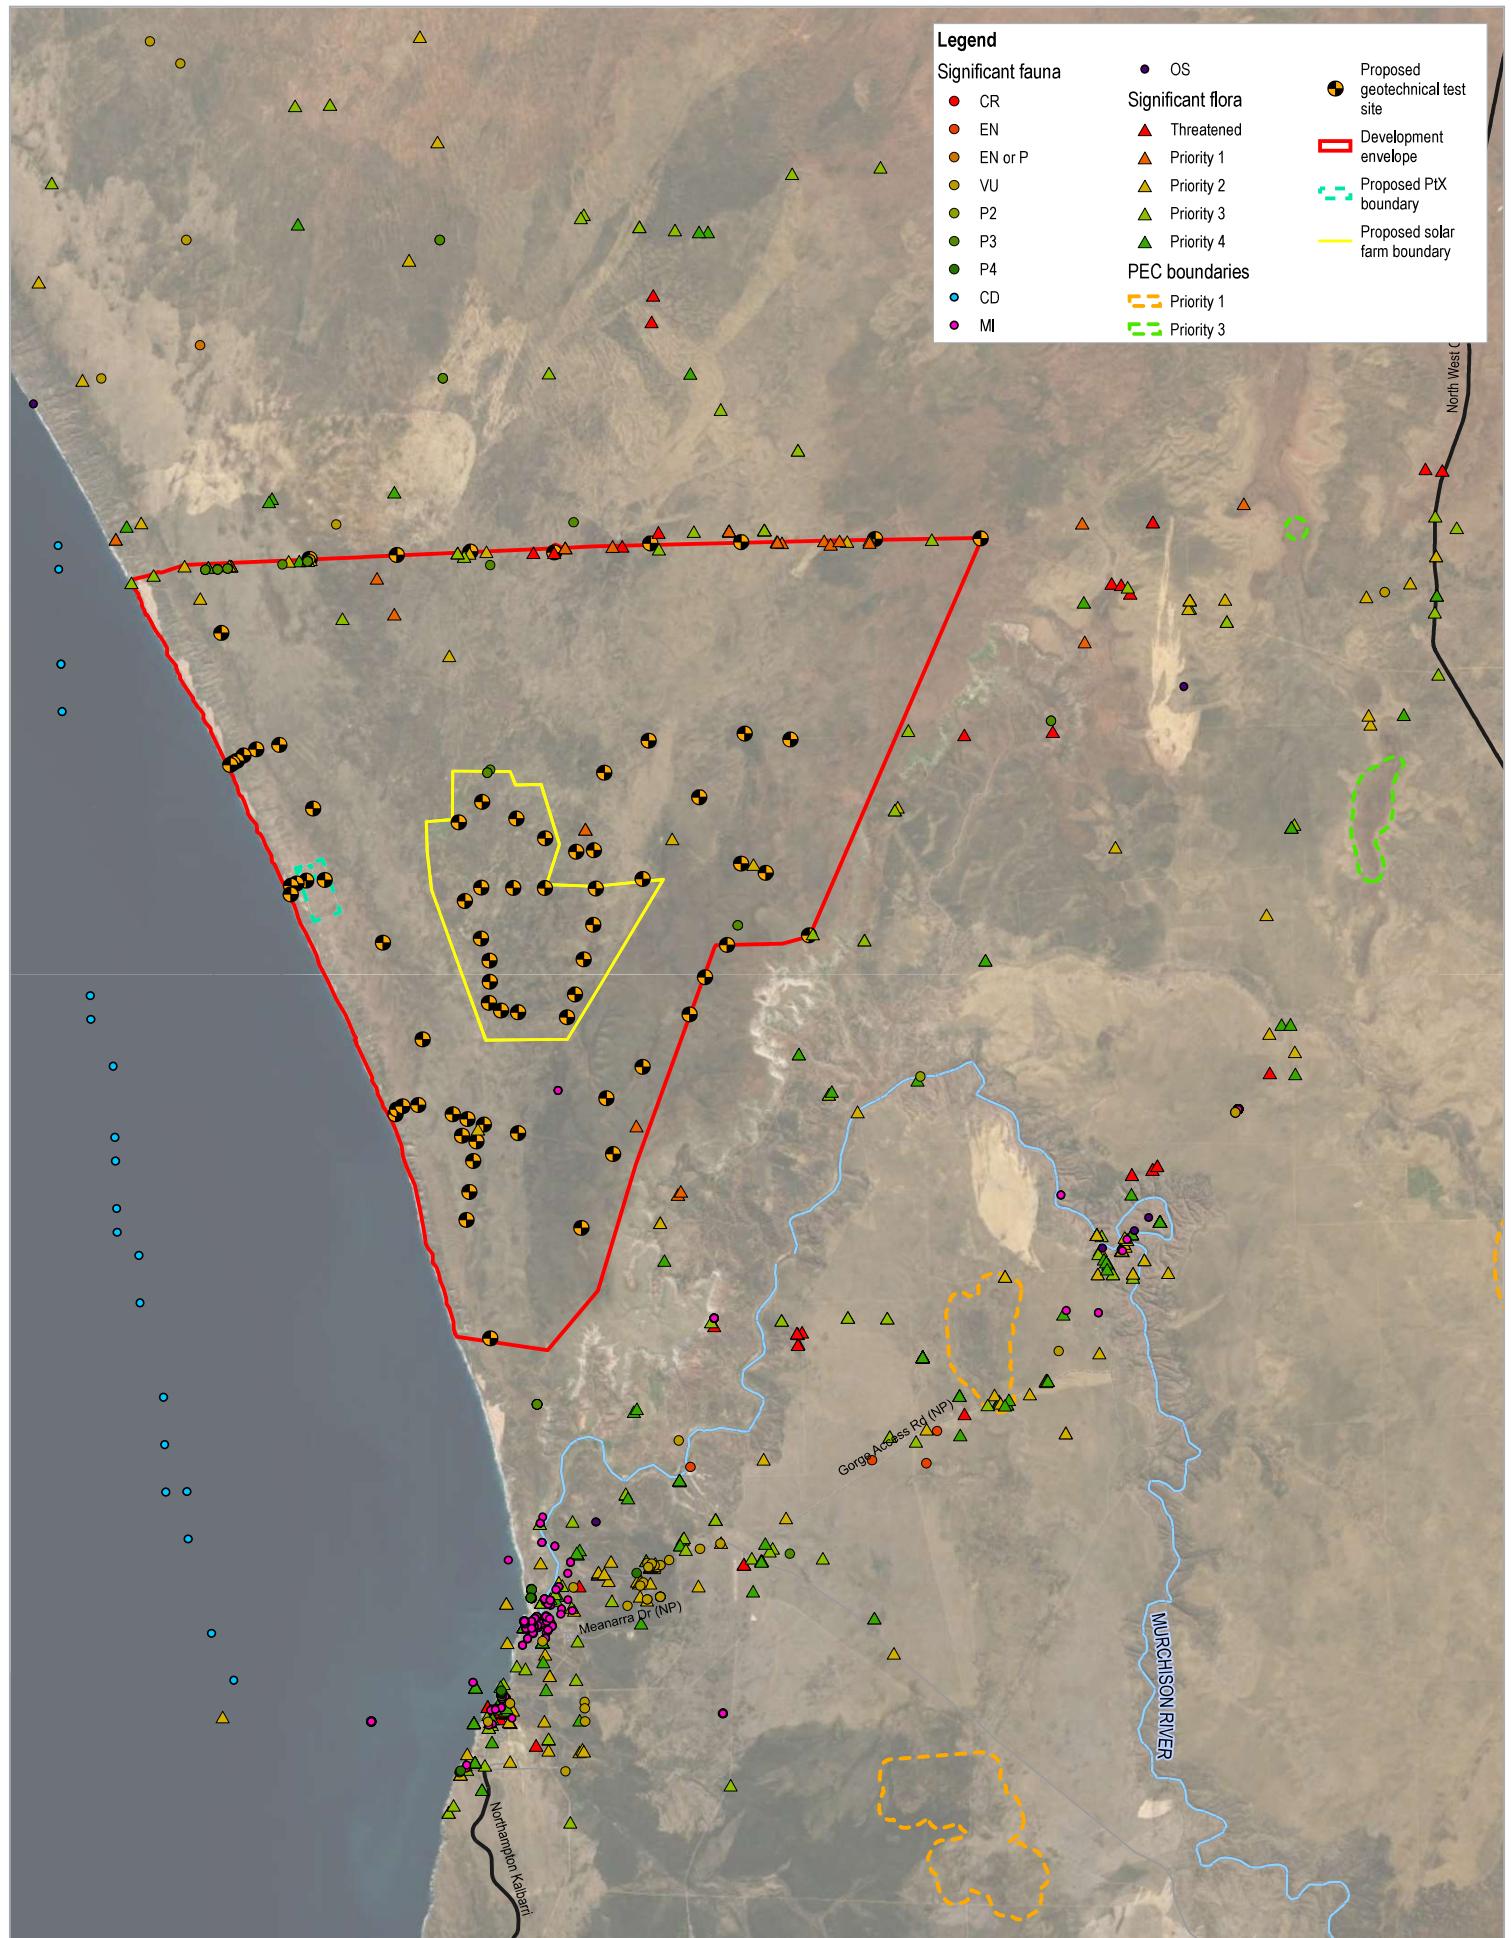

The flora and vegetation survey recorded no Threatened flora species listed under the EPBC Act and/or the *Biodiversity Conservation Act 2016* (BC Act) within the area proposed for geotechnical investigation sites. No DBCA listed Priority flora taxa were recorded within the proposed geotechnical investigation sites. The survey did locate populations of *Verticordia polytricha* (P4) and *Verticordia dichroma* var. *dichroma* (P3) within the DE, however, these populations did not extend into the proposed geotechnical investigation sites and were more than 50 m from the population boundary.

#### **Likelihood of occurrence**

The basic flora survey did not identify any Threatened or Priority flora within the geotechnical investigation sites. It is Unlikely that any conservation listed flora taxa would occur within the proposed geotechnical investigation sites.

### 3.5.8 Weeds

The EPBC Act PMST (DAWE 2021) did not identify any Weeds of National Significance (WoNS) occurring within the DE or within a 5 km radius of the DE.

## **3.6 Fauna**

### **3.6.1 Survey effort**

A basic fauna survey was undertaken by Senior Zoologist Glen Gaikhorst and Senior Botanist Joel Collins in Spring of 2021, from November 15 to November 19. The goal of this survey was to scope suitable sites for the geotechnical investigation, ensuring conservation significant fauna would be avoided.

Fauna habitats within the DE were assigned by reviewing vegetation types by a Senior Zoologist Glen Gaikhorst.

### **3.6.2 Fauna habitat**

The site survey identified 12 broad fauna habitat types, excluding cleared areas, during a preliminary survey of proposed geotechnical investigation sites. The fauna habitats generally aligned with the vegetation types with some grouping of similar vegetation types. The fauna habitats are described in Table 4.

**Table 4 Fauna habitat types within the survey area**

### 3.6.3 Fauna diversity

The *NatureMap* (DBCA 2007-) database identified 478 species previously recorded within a 40 km radius from the centre of the DE (114° 10' 40" E, 27° 22' 43" S), forming a study area encompassing the DE and the surrounding area. This total comprised nine amphibian, 153 bird, 91 fish, 133 invertebrate, 18 mammal and 74 reptile species. Of these species recorded, 472 are native and 6 are naturalised (introduced) species.

### 3.6.4 Conservation significant fauna

The *NatureMap* (DBCA 2007-) database and the EPBC Act PMST, considering the DE and a 5 km buffer (DAWE 2021), identified the presence/potential presence of 45 conservation significant fauna, Appendix B and Appendix C respectively. This total does not include those species that are exclusively marine as no marine habitat is present. The desktop assessment identified:

- 26 species listed as Threatened under the EPBC Act and/or BC Act
- Two species listed at Priority 3 under the BC Act
- Three species listed at Priority 4 under the BC Act
- 12 species protected under international agreement
- One species specially protected.

No threatened or priority fauna species or evidence of their presence were identified in the surveyed geotechnical sites within the proposed geotechnical sites.

#### ***Likelihood of occurrence***

A likelihood of occurrence assessment was conducted post-field survey for the conservation significant fauna identified above in the desktop assessments. The likelihood of occurrence assessment concluded that 10 species are likely to occur, and the remaining species are highly unlikely to occur within the proposed geotechnical sites. Species likely to occur are listed in Table 5.

*Table 5 Conservation significant fauna likely to occur in the clearing area*

<b>Conservation significant species</b>	<b>EPBC</b>	<b>DBCA</b>	<b>Likelihood of occurrence</b>
<i>Actitis hypoleucos</i> (Common Sandpiper)	IA	IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Anous tenuirostris melanops</i>	VU	EN	Highly Unlikely. There is no suitable habitat present in the DE
<i>Ardenna pacifica</i> (Wedge-tailed Shearwater)	IA	IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Arenaria interpres</i> (Ruddy Turnstone)	IA	IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Calidris alba</i> (Sanderling)	IA	IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Calidris canutus</i>	EN	EN	Highly Unlikely. There is no suitable habitat present in the DE
<i>Calidris ferruginea</i> (Curlew Sandpiper)	CE	T	Highly Unlikely. There is no suitable habitat present in the DE
<i>Calidris ruficollis</i> (Red-necked Stint)	IA	IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Calyptorhynchus latirostris</i> (Carnaby's Cockatoo, White-tailed Short-billed Black Cockatoo)	EN	T	Likely. Suitable foraging habitat is present within the DE, however, foraging evidence was not recorded during the survey. Breeding habitat was not present within the DE.
<i>Charadrius leschenaultii</i> (Greater Sand Plover)		T	Highly Unlikely. There is no suitable habitat present in the DE
<i>Charadrius mongolus</i> (Lesser Sand Plover)		T	Highly Unlikely. There is no suitable habitat present in the DE
<i>Dasyurus geoffroii</i> (Chuditch, Western Quoll)	VU	T	Likely. Suitable habitat is present and species is likely to disperse through the area in low numbers
<i>Egernia stokesii badia</i>	EN		Likely. Suitable habitat is present
<i>Falco hypoleucus</i>	VU		Likely. Suitable habitat is present
<i>Falco peregrinus</i> (Peregrine Falcon)		S	Likely. Suitable habitat is present
<i>Hydroprogne caspia</i> (Caspian Tern)		IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Idisosoma nigrum</i> (Shield-backed Trapdoor Spider)	VU	T	Likely. Suitable habitat is present
<i>Leipoa ocellata</i> (Malleefowl)	VU	T	Likely. Suitable habitat is present. The survey did not record malleefowl mounds within the DE.
<i>Lerista humphriesi</i> (taper-tailed West Coast slider (Murchison River), skink)		P3	Likely. Suitable habitat is present
<i>Limosa lapponica</i> (Bar-tailed Godwit)		IA	Highly Unlikely. There is no suitable habitat present in the DE
<i>Limosa lapponica menzbieri</i>	CE		Highly Unlikely. There is no suitable habitat present in the DE
<i>Notamacropus eugenii</i> subsp. <i>derbianus</i> (Tammar Wallaby, Tammar)		P4	Likely. Suitable habitat is present
<i>Numenius madagascariensis</i>	CE		Highly Unlikely. There is no suitable habitat present in the DE
<i>Pandion cristatus</i> (Osprey, Eastern Osprey)		IA	Highly Unlikely. There is no suitable habitat present in the DE

<b>Conservation significant species</b>	<b>EPBC</b>	<b>DBCA</b>	<b>Likelihood of occurrence</b>
<i>Pletholax gracilis</i> subsp. <i>edelensis</i> (Keeled Legless Lizard (Shark Bay))	P3		Likely. Suitable habitat is present
<i>Pluvialis squatarola</i> (Grey Plover)	IA		Highly Unlikely. There is no suitable habitat present in the DE
<i>Rostratula australis</i>	EN		Highly Unlikely. There is no suitable habitat present in the DE
<i>Sternula nereis nereis</i>	VU		Highly Unlikely. There is no suitable habitat present in the DE
<i>Synternon gratiosa</i> (Graceful Sunmotth)	P4		Highly Unlikely. There is no suitable habitat present in the DE
<i>Thalasseus bergii</i> (Crested Tern)	IA		Highly Unlikely. There is no suitable habitat present in the DE
<i>Tringa brevipes</i> (Grey-tailed Tattler)	P4		Highly Unlikely. There is no suitable habitat present in the DE
<i>Tringa nebularia</i> (Common Greenshank, greenshank)	IA		Highly Unlikely. There is no suitable habitat present in the DE

#### ***Fauna likelihood of occurrence assessment guidelines***

<b>Assessment outcome</b>	<b>Description</b>
Known	The species was recorded or has been recorded recently by reputable observers.
Likely	Species are <b>likely</b> to occur in the study area where there is suitable habitat within the study area and there are recent records of occurrence of the species in close proximity to the study area. OR Species known distribution overlaps with the study area and there is suitable habitat within the study area.
Unlikely	Species assessed as <b>unlikely</b> include those species previously recorded in the study area however: -There is limited (i.e. the type, quality and quantity of the habitat is generally poor or restricted) habitat in the study area. -The suitable habitat within the study area is isolated from other areas of suitable habitat and the species has no capacity to migrate into the study area. OR Those species that have a known distribution overlapping with the study area however: -There is limited habitat in the study area (i.e. the type, quality and quantity of the habitat is generally poor or restricted). -The suitable habitat within the study area is isolated from other areas of suitable habitat and the species has no capacity to migrate into the study area.
Highly unlikely	Species that are considered <b>highly unlikely</b> to occur in the study area include: -Those species that have no suitable habitat within the study area. -Those species that have become locally extinct, or are not known to have ever been present in the region of the study area.

#### ***Fauna likelihood of occurrence assessment term definitions***

Term	Description
Desktop study area	A 5 km buffer area around the study area
Study area	Development Envelope (DE)
CR	Critically endangered
EN	Endangered
VU	Vulnerable
IA	International Agreement – listed as a migratory species
Mi	Migratory
CD	Conservation dependent
OS	Other specially protected fauna
P1 – P4	Priority 1 – Priority 4. Threatened and Priority fauna ranking
EPBC Act	<i>Environment Protection and Biodiversity Conservation Act 1999</i>
BC Act	<i>Biodiversity Conservation Act 2016</i>
DBCA	Department of Biodiversity, Conservation and Attractions

## **3.7 Conservation areas**

The DE does not intersect any DBCA managed land or water areas. The closest DBCA managed land areas are Zuytdorp Nature Reserve, 3 km north of the DE, and Kalbarri National Park, 10 km southeast of the DE (GoWA 2021X) (Figure 2-1).

## **3.8 Environmentally sensitive areas**

No Environmentally Sensitive Areas (ESAs) intersect or are adjacent to the DE. Two ESAs do exist to the North and south of the DE, at a distance of 3 km and 10 km respectively (GoWA 2021X).

# 4. Assessment of impacts

## 4.1 Potential impacts to vegetation and flora

### 4.1.1 Vegetation

Potential impacts to vegetation include:

- Removal of approximately 5 ha of vegetation for geotechnical locations
- Introduction or spread of weeds on site
- Dust impacts to adjacent vegetation

With the 79,963 ha DE the total proposed clearing is 5 ha, this represents less than 0.001% of the DE.

The vegetation types and associated condition for each type proposed to be cleared for the works is detailed in Table 6.

*Table 6 Extent of vegetation clearing*

Vegetation Type	Condition and extent (ha)	Number of Geotechnical sites	Total of VT in proposed investigation sites (ha)
VT01	Very good - excellent	Four	0.36
VT02	Very good – excellent	10	0.9
VT03	Very good – excellent	Nine	0.81
VT04	Very good – excellent	Six	0.54
VT05	Very good – excellent	Two	0.18
VT06	Very good – excellent	Three	0.27
VT07	Very good – excellent	No investigation sites in this vegetation type	-
VT08	Very good – excellent	Three	0.27
VT09	Very good – excellent	Three	0.27
VT10	Very good – excellent	Two	0.18
VT11	Very good – excellent	14	1.26
VT12	Very good – excellent	Two	0.18
VT13	Very good – excellent	One	0.09
VT14	Very good – excellent	One	0.09
VT15	Very good – excellent	One	0.09
VT16	Very good – excellent	Eight	0.72
VT17	Degraded	Three	0.27
VT18	Very good - excellent	No investigation sites in this vegetation type	-
VT19	Very good - excellent	No investigation sites in this vegetation type	-
<b>Total</b>			<b>6.48</b>

## 4.1.2 Flora

No priority flora is proposed to be cleared within the DE. The location of the investigation sites was designed to ensure significant flora species in the clearing area were avoided. For all Priority flora within the DE, at least a 50 m buffer has been applied to ensure priority flora are a sufficient distance from clearing areas.

## 4.2 Potential impacts to fauna and fauna habitat

Potential impacts to fauna and fauna habitat include:

- Removal of up to 5 ha of fauna habitat
- Vehicle strike
- Decline in fauna habitat due to introduction and/or spread of weeds

There is potential for fauna diversity and fauna habitat to be impacted by clearing activities. However, clearing 5 ha amounts less than 0.001% of the DE being cleared (GoWA 2020X). The fauna habitat types within the DE will remain well connected and part of a larger contiguous landscape of similar habitats within the local area and surrounding region.

Table 7 describes the extent of clearing within each fauna habitat type.

Table 7 Extent of clearing within each fauna habitat

Fauna habitat	Number of Geotechnical sites	Total habitat in proposed investigation sites (ha)
<i>Melaleuca cardiophylla</i> shrubland on sand with rocky limestone outcropping and ridges. Aligns with VT01.	Four total	0.36
Mixed coastal shrublands over <i>Triodia</i> hummock grassland on yellow sand on limestone. Aligns with VT02, VT03 and VT05	21 total	1.89
<i>Frankenia</i> sp, <i>Mairenana</i> sp, <i>Atriplex</i> sp low shrubland on sand over limestone on coastal slopes and rises. Aligns with VT04.	Six total	0.54
<i>Melaleuca</i> sp, <i>Melaleuca cardiophylla</i> and <i>Alyxia buxifolia</i> low shrubland on sand on low rises. Aligns with VT06.	Three total	0.27
<i>Allocasuarina campestris</i> , <i>Melaleuca cardiophylla</i> and <i>Melaleuca</i> sp shrubland on sand with limestone outcropping or orange sandy loam on flats. Aligns with VT07, VT09 and VT12.	Five total	0.45
<i>Eucalyptus loxophleba</i> subsp. <i>supralaevis</i> open woodlands on loam flats.	Three total	0.27
<i>Eucalyptus</i> sp mallee over <i>Banksia</i> sp, <i>Actinostrobus</i> sp and <i>Malleostemon/Scholtzia</i> sp shrubland over <i>Triodia</i> sp open hummock grassland over <i>Ecdeiocolea monostachya</i> sedges on sandy loam flats. Aligns with VT10.	Two total	0.18
<i>Banksia</i> sp, <i>Xylomelum angustifolium</i> , <i>Allocasuarina campestris</i> , <i>Grevillea</i> sp and <i>Malleostemon/Scholtzia</i> sp shrublands and low heath on pale yellow sand. Aligns with VT 11, VT16.	22 total	1.98
<i>Acacia rostellifera</i> and <i>Santalum acuminatum</i> open shrubland on pale brown sand. Aligns with VT13.	One total	0.09
<i>Eucalyptus</i> sp mallee over mixed shrubland over sedges on yellow sandplain. Aligns with VT14 and VT18 and VT19.	One total	0.09
<i>Eucalyptus camaldulensis</i> scattered trees over mixed shrubland over <i>Triodia</i> sp on pale yellow sand close to claypan system. Align with VT15.	One total	0.09
<i>Casuarina obesa</i> scattered trees over <i>Tecticornia</i> sp on brown clay on drainage claypan. Aligns with VT17.	Three total	0.27
<b>Total</b>	<b>74</b>	<b>6.48</b>

## **4.3 Potential impacts to erosion, flooding and salinity**

There is potential for erosion, flooding and salinity impacts during the geotechnical works. The clearing area comprises of 5 ha within a DE of 79,963 ha, which amounts to 0.001% clearing footprint within the DE.

Given the relatively small amount of hectares to be cleared and the relative distance between small clearings, there is an insignificant impact to erosion, flooding and salinity within the broader area, particularly given that clearing sites will be located adjacent to existing tracks and

No riparian vegetation will be cleared and there will be no disturbance to any drainage lines.

The current surface water hydrology is free-draining sand without pronounced watercourses. The surface water hydrological environment is expected to be maintained. No increased incidence of flooding increase salinity or erosion along drainage lines is likely to occur as a result of the proposed clearing due to the limited clearing extents over the length of the DE.

# **5. Environmental management framework**

Murchison Hydrogen Renewables will use the hierarchy of avoid, minimise, reduce and rehabilitate to mitigate the environmental impacts of the geotechnical works. Potential impacts to the following environmental factors have been considered during avoidance, mitigation and establishing appropriate management efforts:

- Vegetation and flora
- Fauna habitat.

Impact avoidance, mitigation and management measures are detailed in Section 5.1.1 to Section 5.2.1.

## **5.1 Impact avoidance and minimisation through design**

### **5.1.1 Flora and Vegetation**

Flora and vegetation loss has been avoided through design of the geotechnical locations, which are all on or adjacent to existing access tracks within the DE. When considering placement of the geotechnical tests, a site by site assessment with designers, geotechnicians and the environmental team occurred, to identify constraints and the most practicable location of the geotechnical sites, using existing access tracks and existing cleared areas wherever possible.

No proposed test pits are located within VT7, VT18 or VT19.

Impacts to flora and vegetation will be minimised by selecting existing access tracks and sparsely vegetated or bare soil access tracks and borehole/ test pit locations where possible during geotechnical works.

Conservation significant areas to be avoided will be provided to the geotechnical team in hard copy and digital format to ensure sites of environmental significance are avoided in the field when deciding the location of boreholes, test pits and access tracks within the geotechnical corridor.

Priority flora have at least a 50 m buffer away from clearing areas

## **5.2 Impact avoidance and management measures applied on site**

### **5.2.1 Loss of flora, vegetation and fauna habitat**

The following avoidance strategies will be adopted onsite during the geotechnical investigation:

• The geotechnical team will utilise existing tracks and roads where possible, only veering off existing tracks and roads at approximately 500 - 700 m intervals with an access track width of approximately 20 meters to allow for the drill rig and light vehicle access to borehole locations. Vegetation will be driven over and not removed, where practicable.

- Preference will be given to Degraded or already cleared vegetation in proximity to access tracks when selecting borehole locations.
- Boreholes are to be capped and the cleared drill pad area will have topsoil reinstated to facilitate natural regrowth.
- Upon the conclusion of drilling each borehole, the same access track will be used to return to the main road. Preference will be given to Degraded or already cleared vegetation when selecting access tracks where terrain allows.
- All vehicles will be cleaned before entering site to mitigate the risk of weeds entering the site or spreading.

## **6. Assessment against the 10 clearing principles**

The clearing of vegetation in Western Australia is regulated by DWER and requires a permit under Part V of the EP Act, except when a project is assessed under Schedule 6 of the Act or is prescribed by regulation in the Environmental Protection (Clearing Native Vegetation) Regulations 2004.

In making a decision about a clearing permit application under section 51O of the EP Act, the CEO of DWER must consider the clearing principles contained in Schedule 5 of the EP Act so far as they are relevant to the matter under consideration. The ten clearing principles aims to ensure that potential impacts resulting from removal of native vegetation can be assessed holistically.

To support the NVCP application for the geotechnical investigation project, an assessment of the proposed clearing against the ten clearing principles outlined in Schedule 5 of the EP Act has been undertaken and presented in Table 8.

The assessment was undertaken with reference to DWER guideline *A guide to the assessment of applications to clear native vegetation under Part V Division 2 of the Environmental Protection Act 1986* (DWER 2014).

This assessment concluded the proposed clearing associated with the geotechnical investigative works is unlikely to be at variance to any clearing principles.

**Table 8 Assessment against the ten clearing principles**

Clearing principle	Assessment of impacts	Outcome	
<p>(a) Native vegetation should not be cleared if it comprises a high level of biological diversity</p> <p>Broad scale (1:250,000) pre-European vegetation mapping (Beard 1975) identifies eight vegetation associations are present within the DE. These associations are all well represented within the region with at least 83% of the pre-European vegetation extent remaining for most vegetation associations, except 380 and 408 which have approximately 60% and 45% of their pre-European extent remaining. No clearing will be occurring in association 408 and the clearing in association 380 will be less than 0.001% of the remaining extent.</p> <p>The vegetation within the DE is primarily acacia/melaleuca shrublands and areas of open woodland and is consistent and contiguous with native vegetation to the north, east and south. The vegetation present is also expected to be represented with conservation tenure including the Zuytdorp Nature Reserve (3 km north of the DE) and Kalbarri National Park (10 km southeast of the DE).</p> <p>The <i>NatureMap</i> (DBCA 2007-) database identified 1084 taxa previously recorded within a 40 km radius from the centre of the DE. This total comprised of 1020 native taxa and 64 naturalised (introduced) taxa. Dominant families recorded included Myrtaceae (179 taxa), Fabaceae (102 taxa) and Proteaceae (75 taxa).</p> <p>The EPBC Act PMST and NatureMap database identified the presence/potential presence of 105 conservation significant flora within a 40 km radius of the DE. This included:</p> <ul style="list-style-type: none"> <li>– 10 Threatened taxa</li> <li>– Nine Priority 1 taxa</li> <li>– 43 Priority 2 taxa</li> <li>– 29 Priority 3 taxa</li> <li>– 14 Priority 4 taxa.</li> </ul> <p>All of the 74 potential geotechnical test pits were inspected, which determined that no Threatened flora species listed under the EPBC Act and/or the BC Act within the area proposed for geotechnical investigation sites. During the site inspections, one Priority species listed by the DBCA were recorded. As a result, the test site was relocated to an area within Priority flora. On this basis no Priority flora are proposed to be cleared.</p> <p>The preliminary survey of the geotechnical sites identified 20 vegetation types, primarily in excellent condition but with the cleared vegetation type being completely degraded. The test sites were specifically chosen to minimise clearing requirements and have been located on or adjacent to existing access tracks, specifically in areas that are already cleared or are partially cleared with lower diversity.</p> <p>The native vegetation to be cleared is comprised of vegetation types and taxa typical to the region. The native vegetation is not considered to comprise a high level of biological diversity compared to the surrounding area and is anticipated to regrow in these areas. It is, therefore, considered that the clearing is unlikely to be at variance with this principle.</p>	<p>The proposed clearing is unlikely to be at variance to this principle.</p> <p>A NatureMap database search identified 478 species previously recorded within a 40 km radius of the DE. This total comprised</p> <ul style="list-style-type: none"> <li>– nine amphibian</li> <li>– 153 bird</li> </ul>	<p>The proposed clearing is unlikely to be at</p>	
<p>(b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.</p>			

Clearing principle	Assessment of impacts	Outcome	
	<ul style="list-style-type: none"> <li>- 91 fish</li> <li>- 133 invertebrate</li> <li>- 18 mammal</li> <li>- 74 reptile species.</li> </ul> <p>Of these species recorded, 472 are native and 6 are naturalised (introduced) species.</p> <p>A search of the EPBC Act PMST and NatureMap database identified the presence/potential presence of 45 conservation significant fauna within a 40 km buffer of the DE (excluding . This total does not include those species that are exclusively marine as no marine habitat is present. The desktop assessment identified:</p> <ul style="list-style-type: none"> <li>- 26 species listed as Threatened under the EPBC Act and/or BC Act</li> <li>- Two species listed at Priority 3 under the BC Act</li> <li>- Three species listed at Priority 4 under the BC Act</li> <li>- 12 species protected under international agreement</li> <li>- One species specially protected.</li> </ul> <p>The likelihood assessment determined that 10 of these species were likely to occur within the DE.</p> <p>The survey conducted during the preliminary site visit identified Grass wren – northwest coast; however, this was outside of the identified test pit locations.</p> <p>No Threatened or Priority fauna species or evidence of their presence were identified in the surveyed geotechnical sites within the DE.</p> <p>There is potential for fauna diversity and fauna habitat to be impacted by clearing activities. Removal of approximately 5 ha of habitat suitable amounts to less than 0.01% of the DE. The fauna habitat types within the DE will remain well connected and part of a larger contiguous landscape of similar habitats within the local area and surrounding region. Habitats present within the DE are well represented in the local and regional area given the extent of native vegetation adjacent to the DE footprint, and in nearby conservation areas.</p> <p>The DE is unlikely to support significant locally or regionally unique habitat for indigenous fauna dependent on the habitats present in within the DE.</p> <p>The clearing will be small 30 x 30 m test pit sites spread throughout the DE. The proposed clearing is unlikely to have significant impact on the fauna habitat for conservation significant fauna.</p> <p>The proposed clearing is unlikely to be at variance with this principle.</p>	<p>variance to this principle.</p>	
	<p>(c) Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora</p> <ul style="list-style-type: none"> <li>- 10 Threatened taxa</li> <li>- Nine Priority 1 taxa</li> <li>- 43 Priority 2 taxa</li> <li>- 29 Priority 3 taxa</li> <li>- 14 Priority 4 taxa.</li> </ul>	<p>The EPBC Act PMST and NatureMap database identified the presence/potential presence of 105 conservation significant flora within a 40 km radius of the DE. This included:</p> <ul style="list-style-type: none"> <li>- 10 Threatened taxa</li> <li>- Nine Priority 1 taxa</li> <li>- 43 Priority 2 taxa</li> <li>- 29 Priority 3 taxa</li> <li>- 14 Priority 4 taxa.</li> </ul>	<p>The proposed clearing is unlikely to be at variance to this principle.</p>

Clearing principle	Assessment of impacts	Outcome
	<p>All of the 74 potential geotechnical test pits were inspected, which determined that no Threatened flora species listed under the EPBC Act and/or the BC Act within the area proposed for geotechnical investigation sites. During the site inspections, one Priority species listed by the DBCA were recorded. As a result, the test site was relocated to an area within Priority flora. On this basis no Priority flora are proposed to be cleared.</p> <p>The proposed clearing is unlikely to be at variance with this principle.</p>	<p>The proposed clearing is unlikely to be at variance with this principle.</p>
(d) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community	<p>The Threatened Ecological Community (TEC) / Priority Ecological Community (PEC) database did not identify any TEC/PECs occurring within the DE but did identify two PECs outside the DE. One occurring approximately 15 km to the southeast and the other 15 km east of the DE.</p> <p>The proposed clearing is unlikely to be at variance with this principle.</p>	<p>The proposed clearing is unlikely to be at variance with this principle.</p>
(e) Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared	<p>Broad scale (1:250,000) pre-European vegetation mapping (Bead 1975) identifies eight vegetation associations are present within the DE. These associations are all well represented within the region with at least 83% of the pre-European vegetation extent remaining for most vegetation associations, except 380 and 408 which have approximately 60% and 45% of their pre-European extent remaining. No clearing will be occurring in association 408 and the clearing in association 380 will be less than 0.001% of the remaining extent.</p>	<p>The vegetation within the DE is primarily acacia/melaleuca shrublands and areas of open woodland and is consistent and contiguous with native vegetation to the north, east and south. The vegetation present is also expected to be represented with conservation tenure including the Zuytdorp Nature Reserve (3 km north of the DE) and Kalbarri National Park (10 km southeast of the DE).</p> <p>Removal of approximately 5 ha of habitat suitable amounts to less than 0.01% of the DE.</p> <p>The proposed clearing is unlikely to be at variance with this principle.</p>
(f) Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland	<p>The test pit sites have all been determined to avoid watercourses or associated vegetation. There will be no clearing of any vegetation associated with watercourses.</p>	<p>The proposed clearing is unlikely to be at variance with this principle.</p>
(g) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation	<p>The underlying soil type is primarily sandy with limited drainage structures throughout the DE. The test pits have all been located on flat areas that are adjacent to existing tracks on flat locations. The test pits will be filled and flattened and then allowed to rehabilitate.</p> <p>There are no ASS in the DE and not chance.</p>	<p>The proposed clearing is unlikely to be at variance with this principle.</p>
(h) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause impact on the environmental values of any adjacent or nearby conservation area	<p>The DE does not intersect any nearby conservation areas, Zuytdorp Nature Reserve or Kalbarri National Park. No clearing will be undertaken within these conservation areas.</p> <p>The proposed clearing is unlikely to impact the environmental values of Zuytdorp Nature Reserve or Kalbarri National Park.</p>	<p>The proposed clearing is unlikely to be at variance with this principle.</p>
(i) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water	<p>No Internationally (Ramsar) or Nationally Important Wetlands intersect the DE.</p> <p>The DE is located within the proclaimed Gascoyne Groundwater Area.</p> <p>The DE does not intersect any surface water areas or rivers proclaimed under the RIWI Act.</p>	<p>The proposed clearing is unlikely to be at variance with this principle.</p>

Clearing principle	Assessment of impacts	Outcome
	<p>It is considered unlikely any clearing will significantly disturb or interrupt natural drainage and surface run-off patterns. However, during heavy localised rainfall events, erosion may occur in cleared areas resulting in localised, short-term soil erosion and/or sedimentation. It is unlikely clearing will have an impact on groundwater levels or quality. The proposed activity associated with the clearing will not alter the current hydrological regime within the DE due to the relatively minimal clearing proposed within an area causing minimal sheetflow over a short time scale, with adequate surrounding native vegetation to allow water to infiltrate.</p> <p>The proposed clearing is unlikely to cause deterioration in surface water and ground water quality.</p> <p>(K) Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding</p>	<p>Not at variance to this principle.</p>
	<p>The underlying soil type is primarily sandy with limited drainage structures throughout the DE. The test sites have all been located on flat areas that are adjacent to existing tracks on flat locations. The test pits will be filled and flattened and then allowed to rehabilitate.</p> <p>The proposed clearing is unlikely to be at variance with this principle.</p>	<p>Not at variance to this principle.</p>

## **7. Other approvals**

### **7.1 Aboriginal heritage**

Aboriginal heritage sites have been identified from an assessment of public databases and consultation with traditional owners. The location of geotechnical test sites has been designed to avoid identified heritage sites. As such, site disturbance approvals under the *Aboriginal Heritage Act 1972* are not considered necessary.

The geotechnical test sites are considered low risk in terms of heritage sites, as they are all located in or adjacent to disturbed areas.

### **7.2 Referral to the department of Agriculture, Water and Environment**

The decision whether to refer the geotechnical works to DAWE is based upon whether it may have a significant affect Matter of National Environmental Significance (MNES), which are protected EPBC Act. These include; World Heritage properties, National Heritage places, wetlands of international importance (listed under the Ramsar convention), Commonwealth land or marine areas, migratory species protected under international agreements, nuclear actions, nationally threatened species and ecological communities and water resources.

GHD conducted an assessment of significant impacts on MNES for the works. Based on this assessment there are no obvious triggers to suggest referral of the project to DAWE (GHD 2020b). The geotechnical works will not have a significant impact on MNES or impact Commonwealth land and therefore referral is not required.

### **7.3 Referral to the Environmental Protection Authority**

The proposed clearing to support geotechnical works does not have sufficient environmental impacts such to warrant referral to the EPA under Part IV of the EP Act. Environmental impacts can be adequately managed under Part V of the EP Act via a clearing permit.

Murchison Hydrogen Renewables has commenced consultation with the EPA regarding referral of the entire project; however, no referral has been submitted. The consultation with the EPA included the requirement to undertake an initial geotechnical investigation prior to referral under Part IV of the EP Act.

## 8. Offsets

Environmental offsets are conservation actions that provide environmental benefits intended to counterbalance significant residual environmental impacts associated with a proposal (GoWA 2014).

Murchison Hydrogen Renewables have considered requirements to counterbalance the residual impacts through environmental offsets for geotechnical works. Consideration has been given to requirements of the Western Australian Government's Environmental Offset Policy (GoWA 2011) and the Western Australian Offsets Guidelines (GoWA 2014).

Murchison Hydrogen Renewables operates on a hierarchy of avoid, minimize, reduce, rehabilitate and offset environmental impacts. This hierarchy is achieved primarily through changes in scope and design, development and implementation of the environmental management plans or strategies and finally, if required, development of an offset proposal. Application of the management hierarchy has been documented throughout this document.

The assessment against the ten clearing principles concluded the proposed clearing is not at variance with any of the ten clearing principles. Therefore, offsets are not proposed to compensate for the residual impacts associated with the proposed clearing.

Name ID	Species Name	Naturalised	Conservation Code	'Endemic To Query Area'
---------	--------------	-------------	-------------------	-------------------------

## Rare or likely to become extinct

1.	40911 <i>Androcalva bivillosa</i>	T
2.	4599 <i>Beyeria lepidopetaloides</i> (Short-petalled Beyeria)	T
3.	19218 <i>Caladenia barbarella</i>	T
4.	15337 <i>Caladenia bryceana</i> subsp. <i>cracens</i>	T
5.	13618 <i>Caladenia elegans</i>	T
6.	1620 <i>Caladenia wanosa</i> (Kalbarri Spider Orchid)	T
7.	13633 <i>Drakaea concolor</i>	T
8.	5560 <i>Eucalyptus beardiana</i> (Beard's Mallee)	T
9.	5821 <i>Hypocalymma longifolium</i>	T
10.	7570 <i>Lechenaultia chlorantha</i> (Kalbarri Leschenaultia)	T

## Priority 1

11.	14262 <i>Chamelaucium</i> sp. Coolcalalaya (A.H. Burbidge 4233)	P1
12.	46361 <i>Desmocladus ferruginipes</i>	P1
13.	2840 <i>Macarthuria georgeana</i>	P1
14.	46595 <i>Malleostemon nerrenensis</i>	P1
15.	37680 <i>Micromyrtus collina</i>	P1
16.	19907 <i>Pileanthus aurantiacus</i>	P1
17.	20449 <i>Scaevola</i> sp. Golden hairs (D. & B. Bellairs 1450 A)	P1
18.	14350 <i>Thryptomene</i> sp. Carrarrang (M.E. Trudgen 7420)	P1
19.	12438 <i>Verticordia lepidophylla</i> var. <i>quantula</i>	P1

## Priority 2

20.	14077 <i>Acacia gelasina</i>	P2
21.	11375 <i>Acacia leptospermoides</i> subsp. <i>obovata</i>	P2
22.	14145 <i>Acacia stereophylla</i> var. <i>cylindrica</i>	P2
23.	1768 <i>Adenanthes acanthophyllus</i>	P2
24.	7830 <i>Angianthus microcephalus</i> (Small-headed Angianthus)	P2
25.	20695 <i>Astroloma</i> sp. Kalbarri (D. & B. Bellairs 1368)	P2
26.	5368 <i>Baeckea subcuneata</i>	P2
27.	30231 <i>Bossiaea inundata</i>	P2
28.	44895 <i>Caladenia longicauda</i> subsp. <i>minima</i>	P2
29.	40823 <i>Calandrinia vernicosa</i>	P2
30.	35802 <i>Calothamnus cupularis</i>	P2
31.	5464 <i>Calytrix harvestiana</i>	P2
32.	5470 <i>Calytrix paucicostata</i>	P2
33.	5475 <i>Calytrix purpurea</i>	P2
34.	7934 <i>Chthonocephalus tomentellus</i>	P2
35.	4794 <i>Cryptandra glabriflora</i>	P2
36.	29556 <i>Enebatus cristatus</i>	P2
37.	38240 <i>Geleznowia</i> sp. Red Bluff (A. Crawford ADC 597)	P2

Name ID	Species Name	Naturalised	Conservation Code	'Endemic To Query Area'
---------	--------------	-------------	-------------------	-------------------------

38.	2097 <i>Grevillea stenomera</i> (Lace Net Grevillea)		P2	
39.	6863 <i>Hemigenia pimeleifolia</i>		P2	
40.	46593 <i>Malleostemon costatus</i>		P2	
41.	46825 <i>Malleostemon microphyllus</i>		P2	
42.	19382 <i>Melaleuca boophaylla</i>		P2	
43.	5945 <i>Melaleuca oldfieldii</i>		P2	
44.	14220 <i>Millotia jacksonii</i>		P2	
45.	2257 <i>Persoonia brachystylis</i> (Short-styled Persoonia)		P2	
46.	16339 <i>Platysace</i> sp. Kalbarri (D. & B. Bellairs 1383)		P2	
47.	12580 <i>Scaevola chrysopogon</i>		P2	
48.	16277 <i>Schoenus</i> sp. Kalbarri (K.R. Newbey 9352)		P2	
49.	49109 <i>Scholtzia corrugata</i>		P2	
50.	49110 <i>Scholtzia denticulata</i>		P2	
51.	49123 <i>Scholtzia oleosa</i>		P2	
52.	16293 <i>Scholtzia</i> sp. Folly Hill (M.E. Trudgen 12097)		P2	
53.	49134 <i>Scholtzia tenuissima</i> (Delicate Scholtzia)		P2	
54.	49137 <i>Scholtzia truncata</i>		P2	
55.	46822 <i>Seringia saxatilis</i> (Gorge fire-bush)		P2	
56.	44683 <i>Thryptomene calcicola</i>		P2	Y
57.	9194 <i>Thryptomene johnsonii</i>		P2	Y
58.	16820 <i>Thryptomene</i> sp. Eagle Gorge (A.G. Gunnell 2360)		P2	
59.	46755 <i>Thysanotus fragrans</i>		P2	
60.	29482 <i>Thysanotus</i> sp. Kalbarri (D. & B. Bellairs 1523 A)		P2	
61.	12409 <i>Verticordia dasystylis</i> subsp. <i>kalbarriensis</i>		P2	
62.	12426 <i>Verticordia galeata</i>		P2	Y

### Priority 3

63.	14136 <i>Acacia plautella</i>		P3	
64.	1207 <i>Acanthocarpus parviflorus</i>		P3	
65.	6948 <i>Anthocercis intricata</i>		P3	
66.	6951 <i>Anthotroche myoporoides</i> (Myoporum-like Anthotroche)		P3	
67.	1262 <i>Arnocrinum drummondii</i>		P3	
68.	4596 <i>Beyeria gardneri</i>		P3	
69.	5459 <i>Calytrix formosa</i>		P3	
70.	18359 <i>Carpobrotus</i> sp. Thevenard Island (M. White 050)		P3	
71.	5494 <i>Chamelaucium marchantii</i>		P3	
72.	41023 <i>Dasmalla glutinosa</i>		P3	
73.	1980 <i>Grevillea costata</i>		P3	
74.	2031 <i>Grevillea leucoclada</i>		P3	
75.	2083 <i>Grevillea rogersiana</i> (Rogersons' Grevillea)		P3	
76.	17776 <i>Guichenotia impudica</i>		P3	
77.	6869 <i>Hemigenia saligna</i>		P3	
78.	5043 <i>Lasiopetalum oldfieldii</i>		P3	
79.	5044 <i>Lasiopetalum oppositifolium</i>		P3	
80.	3020 <i>Lepidium bispicatum</i>		P3	
81.	2841 <i>Macarthuria intricata</i>		P3	
82.	41442 <i>Mirbelia corallina</i>		P3	
83.	17911 <i>Pileanthus bellus</i>		P3	
84.	49104 <i>Scholtzia bellairsiorum</i>		P3	
85.	14241 <i>Stenantherum divaricatum</i>		P3	
86.	44691 <i>Thryptomene caduca</i>		P3	
87.	17880 <i>Triodia dielsii</i>		P3	
88.	12405 <i>Verticordia cooloomia</i>		P3	Y
89.	12413 <i>Verticordia densiflora</i> var. <i>roseostella</i>		P3	
90.	14712 <i>Verticordia dichroma</i> var. <i>dichroma</i>		P3	
91.	12417 <i>Verticordia dichroma</i> var. <i>syntoma</i>		P3	

### Priority 4

92.	1598 <i>Caladenia integra</i> (Mantis Orchid, Smooth-lipped Spider Orchid)		P4	
93.	7241 <i>Eremophila microtheca</i> (Heath-like Eremophila)		P4	
94.	13544 <i>Eucalyptus zopherophloia</i> (Blackbutt Mallee)		P4	
95.	5193 <i>Frankenia confusa</i>		P4	
96.	4033 <i>Jacksonia velutina</i>		P4	
97.	3043 <i>Lepidium puberulum</i>		P4	
98.	13774 <i>Lepidobolus densus</i>		P4	
99.	36203 <i>Liparophyllum congestiflorum</i>		P4	
100.	17026 <i>Scaevola kallophylla</i>		P4	
101.	19953 <i>Stachystemon nematophorus</i>		P4	
102.	17885 <i>Triodia bromoides</i>		P4	
103.	12399 <i>Verticordia capillaris</i>		P4	
104.	6111 <i>Verticordia polytricha</i> (Northern Cauliflower)		P4

**Conservation Codes**

- T - Rare or likely to become extinct
- X - Presumed extinct
- IA - Protected under international agreement
- S - Other specially protected fauna
- 1 - Priority 1
- 2 - Priority 2
- 3 - Priority 3
- 4 - Priority 4
- 5 - Priority 5

<sup>1</sup> For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

Name ID	Species Name	Naturalised	Conservation Code	¹Endemic To Query Area
---------	--------------	-------------	-------------------	------------------------

#### Rare or likely to become extinct

1. 24784 *Calidris ferruginea* (*Curlew Sandpiper*) T
2. 24734 *Calyptorhynchus latirostris* (*Carnaby's Cockatoo, White-tailed Short-billed Black Cockatoo*) T
3. 25575 *Charadrius leschenaultii* (*Greater Sand Plover*) T
4. 25576 *Charadrius mongolus* (*Lesser Sand Plover*) T
5. 24092 *Dasyurus geoffroii* (*Chuditch, Western Quoll*) T
6. 33917 *Idiosoma nigrum* (*Shield-backed Trapdoor Spider*) T
7. 24557 *Leipoa ocellata* (*Malleefowl*) T

#### Protected under international agreement

8. 41323 *Actitis hypoleucos* (*Common Sandpiper*) IA
9. 48573 *Ardenna pacifica* (*Wedge-tailed Shearwater*) IA
10. 25736 *Arenaria interpres* (*Ruddy Turnstone*) IA
11. 24780 *Calidris alba* (*Sanderling*) IA
12. 24788 *Calidris ruficollis* (*Red-necked Stint*) IA
13. 48587 *Hydroprogne caspia* (*Caspian Tern*) IA
14. 30932 *Limosa lapponica* (*Bar-tailed Godwit*) IA
15. 24497 *Oceanites oceanicus* (*Wilson's Storm-petrel*) IA
16. 48591 *Pandion cristatus* (*Osprey, Eastern Osprey*) IA
17. 24383 *Pluvialis squatarola* (*Grey Plover*) IA
18. 48597 *Thalasseus bergii* (*Crested Tern*) IA
19. 24808 *Tringa nebularia* (*Common Greenshank, greenshank*) IA

#### Other specially protected fauna

20. 25624 *Falco peregrinus* (*Peregrine Falcon*) S
21. 24051 *Megaptera novaeangliae* (*Humpback Whale*) S

#### Priority 2

22. 34022 *Hypseleotris aurea* (*Golden Gudgeon*) P2

#### Priority 3

23. 25141 *Lerista humphriesi* (*taper-tailed West Coast slider (Murchison River), skink*) P3
24. 25006 *Pletholax gracilis* subsp. *edelensis* (*Keeled Legless Lizard (Shark Bay)*) P3

#### Priority 4

25. 48024 *Notamacropus eugenii* subsp. *derbianus* (*Tammar Wallaby, Tammar*) P4
26. 33992 *Synemon gratiosa* (*Graceful Sunmoth*) P4
27. 24803 *Tringa brevipes* (*Grey-tailed Tattler*) P4

#### Non-conservation taxon

28. *Abudefdaf sordidus*
29. 24559 *Acanthagenys rufogularis* (*Spiny-cheeked Honeyeater*)

#### Conservation Codes

- T - Rare or likely to become extinct
- X - Presumed extinct
- IA - Protected under international agreement
- O - Other specially protected fauna
- 1 - Priority 1
- 2 - Priority 2
- 3 - Priority 3
- 4 - Priority 4
- 5 - Priority 5

<sup>1</sup> For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

# EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 24-Nov-2021

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">Listed Threatened Ecological Communities:</a>	None
<a href="#">Listed Threatened Species:</a>	50
<a href="#">Listed Migratory Species:</a>	42

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

# Details

## Matters of National Environmental Significance

World Heritage Properties		[ Resource Information ]	
Name	State	Legal Status	Buffer Status
<a href="#">Shark Bay, Western Australia</a>	WA	Declared property	In buffer area only

National Heritage Places		[ Resource Information ]	
Name	State	Legal Status	Buffer Status
Natural <a href="#">Shark Bay, Western Australia</a>	WA	Listed place	In buffer area only

Commonwealth Marine Area	[ Resource Information ]
--------------------------	--------------------------

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name	Buffer Status
EEZ and Territorial Sea	In buffer area only

Listed Threatened Species	[ Resource Information ]
---------------------------	--------------------------

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
<a href="#">Anous tenuirostris melanops</a>	Vulnerable	Species or species habitat may occur within area	In feature area
Australian Lesser Noddy [26000]			
<a href="#">Calidris canutus</a>	Endangered	Species or species habitat may occur within area	In feature area
Red Knot, Knot [855]			
<a href="#">Calidris ferruginea</a>	Critically Endangered	Species or species habitat known to occur within area	In feature area
Curlew Sandpiper [856]			
<a href="#">Diomedea amsterdamensis</a>	Endangered	Species or species habitat may occur within area	In feature area
Amsterdam Albatross [64405]			

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u><a href="#">Diomedea exulans</a></u> Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area	In feature area

<u><a href="#">Megaptera novaeangliae</a></u>			
Humpback Whale [38]	Migration (north and south)	Known to occur	In feature area

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

### Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

### Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.
