Executive Summary

The Shire of Lake Grace (the Shire) is proposing the extension of the current filling area of the Newdegate waste management facility. As such, a clearing permit application to the Department of Water and Environmental Regulation (DWER) is required. To support the clearing permit, the Shire has commissioned Natural Area Consulting Management Services (Natural Area) to undertake biological surveys within the proposed clearing site. Surveys included a detailed flora and vegetation survey and a basic fauna survey, including a targeted declared rare and priority listed species (DRF) search and black cockatoo habitat assessment.

The survey aimed to determine:

- flora and fauna species present (native and non-native)
- the extent and boundaries of vegetation type and condition
- the location of declared rare or priority flora, fauna and/or ecological communities
- the presence of threatened black cockatoo habitat.

The flora and vegetation survey within the site confirmed:

- a total of 114 flora species from 34 families present
- a total of 23 introduced (weeds) and 91 native flora species
- no priority or threatened flora species within the site
- one vegetation type occurred within the site, Mixed *Eucalyptus* Open Mallee Woodland
- vegetation condition across the site ranged from Completely Degraded to Excellent, with the majority of this site in Excellent condition (49.6%).

The fauna survey within the site confirmed:

- a total of 18 fauna species present
- 13 birds, two reptiles, and three mammals within the site
- two of the mammals were introduced species, Red Fox (**Vulpes vulpes*) and Feral Cats (**Felis catus*)
- no threatened black cockatoo habitat exists within the site, with the mallee *Eucalyptus* spp. trees present potentially providing low quality food sources
- good quality habitat within the site is present for reptiles (logs and leaf litter), invertebrates and small bird species in the form of differing vegetation structural layers which provide shelter, food sources and nesting capacity in the canopy of the mallees present.

As the flora and vegetation survey are to inform potential clearing permit applications outcomes of the survey were assessed against the ten Western Australian clearing principles. The clearing application may be at variance with two of the ten principles (principles A and E). As the site proposed clearing area occurs within an extensively cleared area, additional conditions may be assigned to a clearing permit when the application is assessed through the Department of Water Environment and Regulation (DWER), including the potential requirement for an offset.

1.0 Introduction

The Shire of Lake Grace (The Shire) is proposing the extension of the Newdegate waste management facility. As such, a clearing permit application to the Department of Water and Environmental Regulation (DWER) is required. To support the clearing permit, the Shire has commissioned Natural Area Consulting Management Services (Natural Area) to undertake biological surveys within the proposed clearing site. Surveys included a detailed flora and vegetation survey and a basic fauna survey, including a targeted declared rare and priority listed species (DRF) search and black cockatoo habitat assessment.

1.1 Location

The survey area is approximately 2.7 ha and is located within the Newdegate waste management facility property boundary, Lot 1 Whurr Road. The site occurs within the Shire of Lake Grace and approximately 5.8 km north-east of the Newdegate town centre (Figure 1). The survey site occurs outside of an environmentally sensitive area (Department of Water and Environmental Regulation 2022).

1.2 Scope

Activities undertaken by Natural Area included:

- Desktop database searches to identify potential conservation significant flora and fauna species, along with any threatened or priority ecological communities. Desktop searches include NatureMap, Protected Matters Search Tool (PMST), and Department of Biodiversity, Conservation and Attractions (DBCA) flora, fauna and communities database searches.
- Detailed flora and vegetation survey to determine the extent of the vegetation condition and type, as well as recording flora (native and introduced) species present, including a targeted search for the presence of threatened or priority species.
- Basic fauna survey to record opportunistic sightings and evidence of the presence of fauna and assess general fauna habitat.
- Black cockatoo habitat assessment to record sightings of threatened black cockatoo species, presence of potential breeding hollows, location of habitat trees (diameter at breast height (DBH) >500 mm) or evidence of their presence.
- Reporting findings, including assessment against the clearing principles and provision of maps representing site assessment outcomes.

1.3 Objectives

The objective of the survey was to collect sufficient data to adequately inform future clearing permit applications to DWER, as required by clearing provisions under the *Environmental Protection Act 1986* (WA) (EP Act) and *Environmental Protection (Clearing of Native Vegetation) Regulations 2004* (WA) ahead of the extension of Newdegate waste management facility.

The flora survey aimed to determine:

- the extent and boundaries of vegetation types and condition
- flora species (native and introduced) present
- the location of declared rare or priority flora and or ecological communities.

The fauna survey aimed to determine:

- the presence fauna presence through indicators such as tracks, scats, dens/warrens and calls
- fauna species (native and introduced) present
- presence of declared rare or priority fauna and potential habitat.

2.0 Site Characteristics

The characteristics of a site have a strong bearing on the flora, vegetation, fauna, and ecological communities present. Key characteristics of Lot 1 are outlined in this section.

2.1 Regional Context

According to the Interim Biogeographical Regionalisation of Australia (IBRA) descriptions, the site is located within the Western Mallee (MAL02) IBRA subregion. This region is characterised by gently undulating landscapes, with partially obstructed drainage (Beecham and Danks, 2001). The region can contain areas of exposed granite, sandplains and laterite pavements and salt lakes which can have a granite base (Beecham and Danks, 2001). Vegetation in this region comprises of areas of *Eucalyptus* woodlands mainly on fine-textured soils, with scrub-heath on sands and laterite soil types (Beecham and Danks, 2001). The region covers an area of approximately 4,763,963 ha (Beecham and Danks, 2001).

2.2 Climate

The climate experienced in the area is Mediterranean, with dry, hot summers and cool, wet winters. According to the Bureau of Meteorology (2021); Newdegate WA, site number 010692, the region has an average:

- rainfall of 365.6 mm pa, with rain falling predominantly between May and August
- maximum temperature ranging from 19.9 °C in winter to 31.3 °C in summer, with a maximum recorded temperature of 46.7 °C
- minimum temperatures ranging from 4.3 °C in winter to 14.1 °C in summer, with a minimum recorded temperature of -4.3 °C
- predominant wind directions include morning easterlies and westerly sea breezes during the summer months, with an average wind speed of 21.3 km/h and gusts of more than 100 km/h.

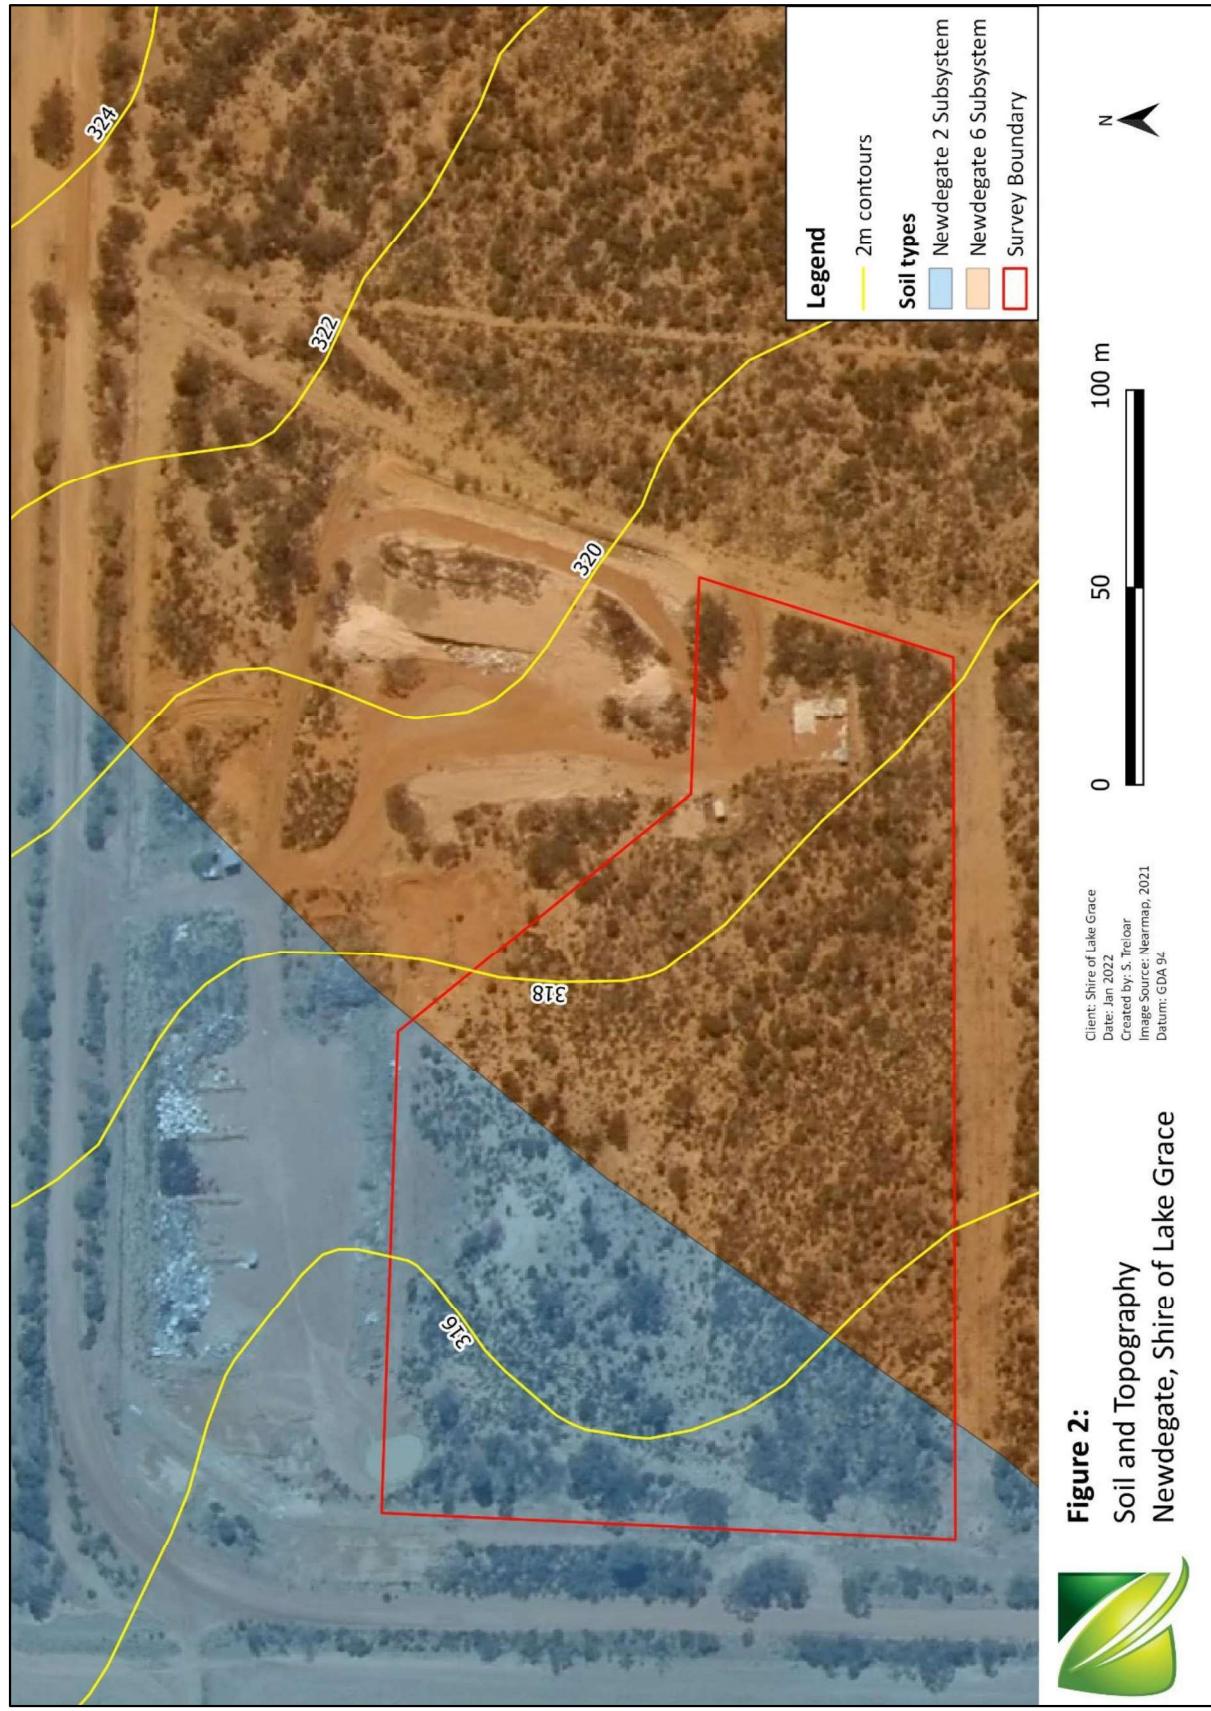

2.3 Topography and Soils

The site is elevated but relatively flat, with Australian Height Datum (AHD) ranging from 316 m in the south-west corner of the site to 318 m in the north-east corner of the site (Department of Primary Industries and Regional Development (DPIRD), 2021). Two soil types are present within the site, the Newdegate 2 Subsystem and Newdegate 6 Subsystem (Table 1 and Figure 2) (DPIRD, 2021).

Table 1: Soil types within survey area

Name	Symbol	Description
Newdegate 2 Subsystem	250Nw_2	Lower to upper slopes, broad crests and upland plains. Soils are mainly grey and yellow/brown sandy duplex soils, often alkaline with hard setting surfaces, and duplex sandy gravels.
Newdegate 6 Subsystem	250Nw_6	Areas of significant rock outcrop including monadnocks, and sheet rock. Associated soils include stony soils, yellow/brown deep sandy duplex soils, deep sands and red soils.

Datum: GDA 94.

2.4 Vegetation Association

One pre-European vegetation type exists within the site boundary, namely Hyden (HYDEN_945), which was identified using the NRInfo Portal (DPIRD, 2021). It is typified by large areas of mallee. The vegetation association Hyden_945 is described as a mosaic of medium woodlands which can contain Salmon Gum (*Eucalyptus salmonophloia*) and Shrublands containing mallee scrub, Redwood (*Eucalyptus transcontinentalis*) and Black Marlock (*Eucalyptus redunca*) (Government of Western Australia, 2019). Within the local government area of the Shire of Lake Grace, there is 15.15% remaining of the Hyden vegetation association 945 (Government of Western Australia, 2019).

2.5 Fauna Habitat

There is potential for the three threatened black cockatoos and their habitat to occur on site including, the Carnaby's Cockatoo (*Calyptorhynchus latirostris*) listed as endangered under the *EPBC Act 1999* (Cwlth), the Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksia naso*) and the Baudin's Black Cockatoo (*Calyptorhynchus baudinii*) listed as vulnerable; all are listed as threatened under the *Biodiversity Conservation Act 2016* (WA). According to NationalMap the survey site does not occur within any areas listed as roosting, breeding or foraging areas by the threatened black cockatoos.

3.0 Methodology

3.1 Desktop and Literature Review

The desktop survey included reviewing online databases to gather contextual knowledge and determine preliminary site characteristics including:

- likely native and non-native flora and fauna species present
- current extent of native vegetation
- general floristic community types
- likely presence of threatened or priority flora and fauna species
- likely presence of any threatened or priority ecological communities.

The following databases were accessed to obtain relevant information:

- NatureMap (DBCA, 2021a) (Appendix 1)
- Protected Matters Search Tool (Department of Agriculture, Water, and the Environment (DAWE), 2021) (Appendix 2)
- FloraBase (DBCA, 2021b)
- threatened and priority flora, fauna and ecological community database searches (DBCA, 2021c).

Conservation code definitions for the State and Commonwealth are provided in Appendix 3. Summary sheets of threatened and priority flora potentially occurring in the area were created for quick reference in the field and to assist on-ground surveys are provided in Appendix 4.

3.2 On-ground Flora Survey

Natural Area ecologists Kylie Sadgrove and John Wei undertook the survey between November 23 to 25 2021, with key data recorded using Mappt software on a handheld tablet. Survey activities included:

- identification of flora species present by walking the site, including targeted declared rare and priority species indicated as potentially present during desktop assessments
- setting out a total of three quadrats 10 x 10 m quadrats (recording the middle and understorey), and 20 x 20 m quadrats in the same location to record overstorey as specified in the EPA technical guidance document (EPA, 2016) (Figure 6). Landscape characteristics were recorded including soil types/colour, aspect, slope, surface rock, topography, drainage, leaf litter depth, percentage cover, and percentage of bare ground and species composition (height and cover) within each quadrat
- recording vegetation type including dominant over, middle and understorey species and vegetation condition extent across the site
- the use of GPS to map significant species and boundaries of differing vegetation type and condition across the site
- determining the presence of any further threatened or priority listed flora species and/or ecological communities listed under the *Biodiversity and Conservation Act 2016* (WA) and/or the *Environment Protection and Biodiversity Conservation Act 1999* (Commonwealth).

The flora and vegetation survey was conducted in accordance with *Technical Guidance-Flora and Vegetation Surveys for Environmental Impact Assessment* (Environmental Protection Authority (EPA), 2016), and

included a desktop review of literature and databases. Samples were collected in the field, or photographs taken of unfamiliar species to enable later identification.

3.2.1 Vegetation Type

Vegetation type was determined using the structural classes described in *Bush Forever Volume 2* (Government of Western Australia, 2000), and records dominant over, middle and understorey species. A tablet equipped with GPS mapping software (Mappt) was used to mark the change in vegetation type across the site. A description of the various structural classes is provided in Table 2.

Table 2: Vegetation structural classes

Life Form/Height Class	Canopy Percentage Cover			
	100 – 70%	70 – 30%	30 – 10%	10 – 2 %
Trees over 30 m	Tall closed forest	Tall open forest	Tall woodland	Tall open woodland
Trees 10 – 30 m	Closed forest	Open forest	Woodland	Open woodland
Trees under 10 m	Low closed forest	Low open forest	Low woodland	Low open woodland
Tree Mallee	Closed tree mallee	Tree mallee	Open tree mallee	Very open tree mallee
Shrub Mallee	Closed shrub mallee	Shrub mallee	Open shrub mallee	Very open shrub mallee
Shrubs over 2 m	Closed tall scrub	Tall open scrub	Tall shrubland	Tall open shrubland
Shrubs 1 – 2 m	Closed heath	Open heath	Shrubland	Open shrubland
Shrubs under 1 m	Closed low heath	Open low heath	Low shrubland	Low open shrubland
Grasses	Closed grassland	Grassland	Open grassland	Very open grassland
Herbs	Closed hermland	Hermland	Open hermland	Very open hermland
Sedges	Closed sedgeland	Sedgeland	Open sedgeland	Very open sedgeland

Source: Government of Western Australia, 2000

3.2.2 Vegetation Condition

Vegetation condition was assessed using the rating scale attributed to Keighery in *Technical Guidance-Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA, 2016). A tablet equipped with GPS mapping software (Mappt) was used to mark the vegetation condition across the site. Table 3 provides a description of the rating scale.

Table 3: Vegetation condition ratings

Category	Description
1 Pristine	Pristine or nearly so, no obvious signs of disturbance or damage caused by human activities since European settlement.
2 Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species. Damage to trees caused by fire, the presence of non-aggressive weeds and occasional vehicle tracks.

Category	Description
3 Very Good	Vegetation structure altered, obvious signs of disturbance. Disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
4 Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. Disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds, partial clearing, dieback and grazing.
5 Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds at high density, partial clearing, dieback and grazing.
6 Completely Degraded	The structure of the vegetation is no longer intact, and the area is completely or almost completely without native species. These areas are often described as ‘parkland cleared’ with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: EPA, 2016

3.3 On-ground Fauna Survey

A basic fauna survey and black cockatoo habitat assessment was undertaken in conjunction with other survey activities. The fauna survey was completed in accordance with a Basic Fauna Survey as outlined in the Environmental Protection Authority (EPA) *Technical Guidance, Terrestrial vertebrate fauna surveys for environmental impact assessment* (EPA, 2020). A basic survey is defined as a low-intensity survey, which gathers broad fauna and habitat information including opportunistic fauna observations (EPA, 2020). The fauna survey included:

- recording opportunistic sightings of fauna species while traversing the site, either directly or indications of their presence (including scats, tracks, diggings, calls, and evidence of foraging in the form of chewed nuts). Two trail cameras were installed for two nights to target nocturnal or shy species
- recording boundaries of fauna habitat types present
- recording locations of evidence of feeding by black cockatoos in the form of chewed nuts and cones
- recording locations of potential habitat trees encountered with a diameter at breast height (DBH) greater than 500 mm which have the potential to provide habitat in the form of foraging, roosting and/or nesting for threatened black cockatoos.

3.4 Limitations

Several limitations associated with both desktop and on-ground flora and fauna surveys exist, including:

- database searches provide an indication of what flora species may be present, with on ground surveys required to confirm those present, this is negligible as a field survey was undertaken
- information on flora species provided on some databases include out-of-date species names, meaning that names need to be checked for currency and were updated as required
- on-ground surveys indicate species present at the time of the assessment, with species flowering at different times not always able to be identified, with not all species flowering every year

- the differing databases are reliant on information submitted via various reporting mechanisms, so all records of a particular species or ecological community within a specified area may not be complete
- some fauna species are highly mobile and may utilise the site as part of their range but may not be present within the site at the time of the survey
- certain fauna species are shy, difficult to observe or active at different times of the day and may not be observed even though they are present on site.

4.0 Flora Survey Results

4.1 Desktop Survey

NatureMap identified a total of 372 flora species which could potentially occur within a 10km radius of the survey area including:

- 331 dicotyledons
- two gymnosperms
- 39 monocotyledons.

4.1.1 Significant flora

A desktop survey of online databases indicated the potential for a total of 51 conservation significant species to occur within 10 km of the survey area (Table 4). NatureMap indicated 26 conservation significant flora species listed under the *Biodiversity Conservation Act 2016* (WA) as potentially occurring within a 10 km radius of the site (DBCA, 2021a) (Appendix 1). A review of the Protected Matters Search Tool (PMST) (DAWE, 2021) indicated 11 significant flora species listed under the *EPBC Act 1999* (Cwlth) as potentially occurring within a 10 km radius of the site (Appendix 2). A review of the DBCA (2021c) threatened and priority flora database indicated 44 threatened or priority species have been recorded within 10 km of the site.

Of the conservation significant species potentially occurring within the area, it was determined that the site conditions (soil type, drainage, location) may be suitable for 28 (highlighted green) of these species (Table 4). Conservation code descriptions are provided in Appendix 4.

4.1.2 Threatened and Priority Ecological Communities

A review of the PMST report identified one listed Threatened Ecological Community (TEC) that could potentially occur within 10 km of the site, Eucalypt Woodlands of the Western Australian Wheatbelt which is listed as critically endangered under the EPBC Act 1999 (DAWE, 2021). A review of the DBCA's ecological communities database also indicated that the Eucalypt Woodlands of the Western Australian Wheatbelt TEC has been previously recorded within the site boundary (DBCA, 2021c).

4.2 Flora Survey Results

4.2.1 Flora

A total of 114 flora species (taxa) were recorded from 34 families during the field survey, including 23 introduced (weeds) and 91 native species. The plant families which contained the most species were Myrtaceae, Asteraceae, Fabaceae and Poaceae. No priority or threatened flora species were identified within Lot 1 during the 2021 spring survey. An orchid species was recorded during the survey, *Diuris* sp. which was unable to be identified to species level as the plant had already sensed. It is considered unlikely that this species is conservation significant flora as there are no previous records of significant flora in this genus, within the region of the survey.

No Declared Pests and Weeds of National Significance (WoNS) were identified within the survey area.

Examples of native flora species are shown in Figure 3 and weed species in Figure 4. Quadrat data is listed in Appendix 5 with a complete flora species list provided in Appendix 6.

Dampiera eriocephala (Woolly-headed Dampiera)

Cheiranthera brevifolia

Eucalyptus tenera
(Common Southern Mallee)

Verticordia eriocephala
(Common Cauliflower)

Anthotium rubriflorum
(Red Anthotium)

Grevillea didymobotrya subsp.
didymobotrya

Templetonia rossii

Persoonia quinquenervis

Eremophila drummondii
(Drummond's Eremophila)

Figure 3: Examples of native flora species recorded within the site

Smooth Cats-ear
(**Hypochaeris glabra*)

Iceplant (**Mesembryanthemum crystallinum*)

Umbrella Sedge (**Cyperus eragrostis*)

**Acacia iteaphylla*

Bearded Oat
(**Avena barbata*)

Black Berry Nightshade
(**Solanum nigrum*)

Figure 4: Examples of introduced flora species recorded within the site

4.2.2 Vegetation Type

One vegetation type was recorded within the survey area, Mixed *Eucalyptus* Open Mallee Woodland. This vegetation type consisted of an upper storey of mixed native Eucalypts over a middle storey of mixed native shrubs dominated by *Melaleuca hamata*, *Westringia* spp. and *Acacia* spp. over an understorey of native grasses (*Austrostipa* spp. and *Neurachne alopecuroides*) and native herbs (Figure 5).

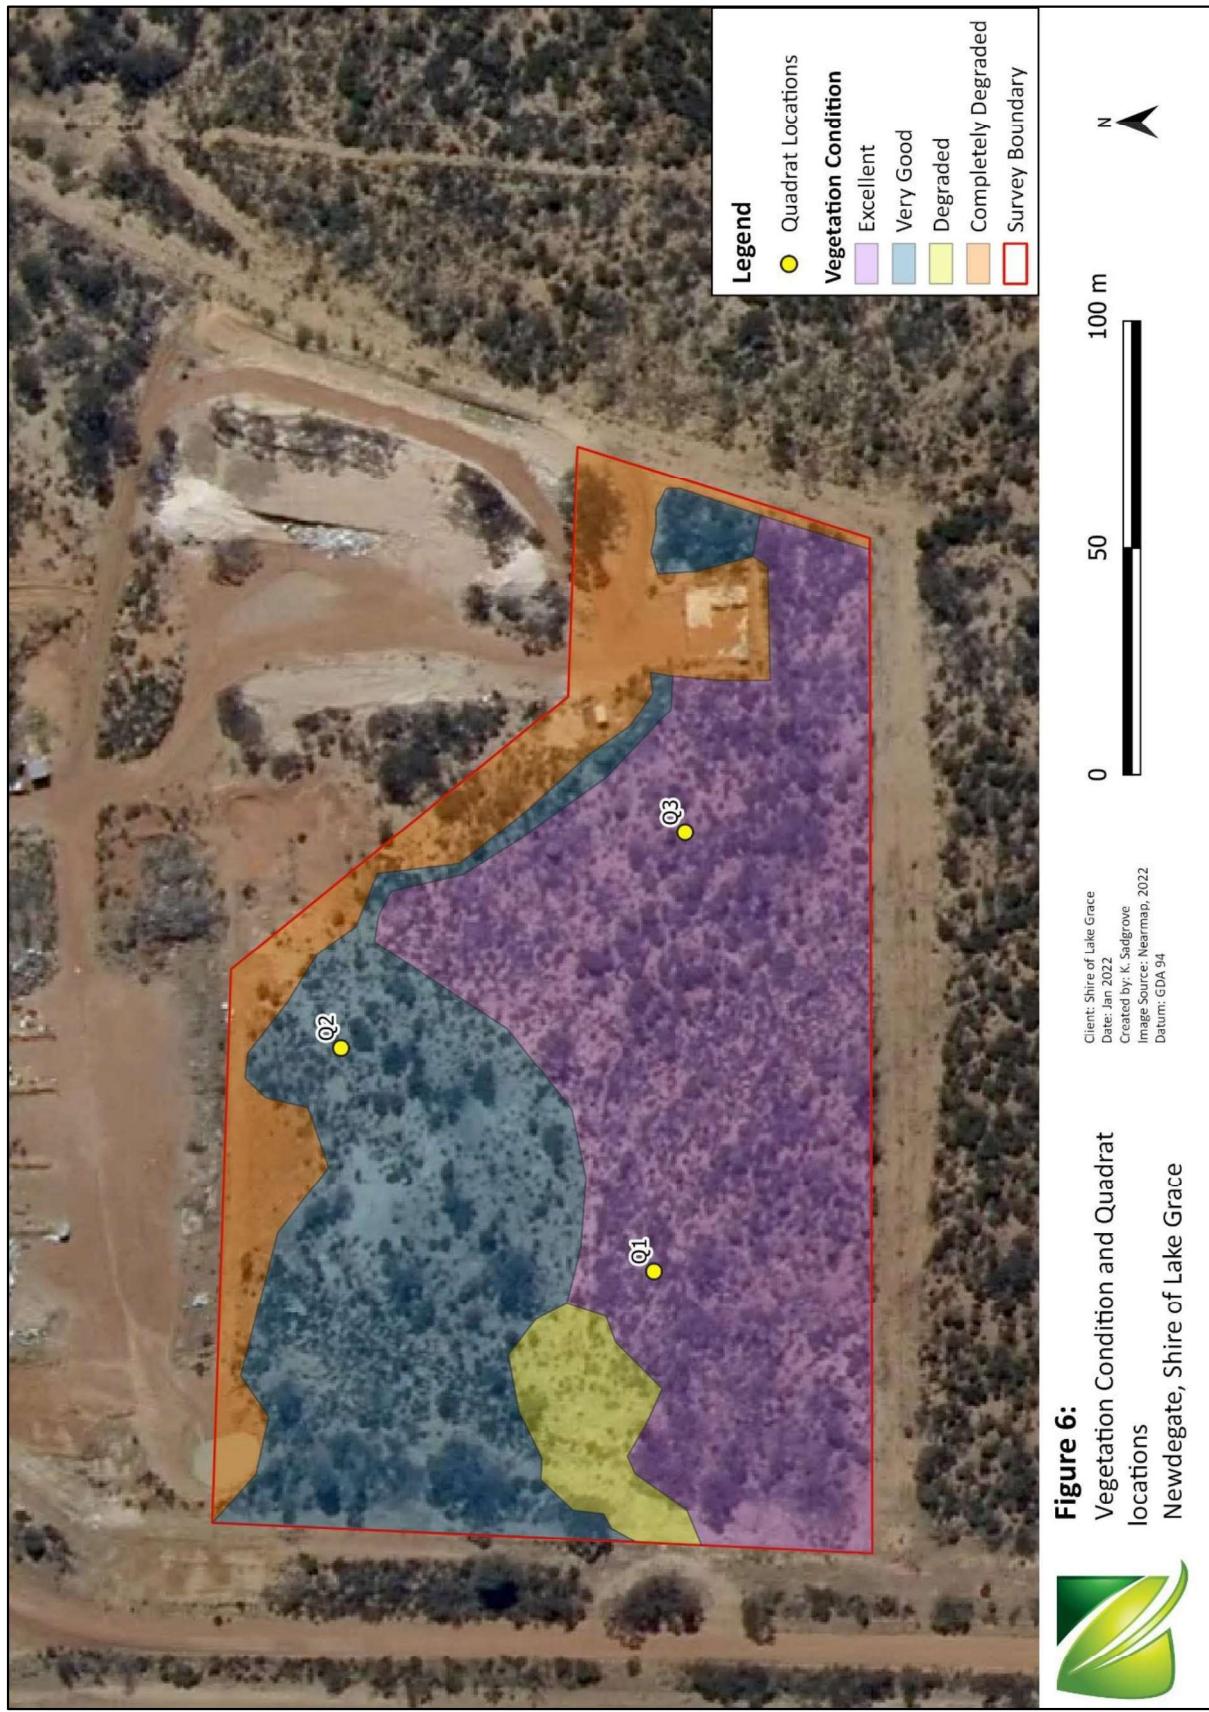

Figure 5: Vegetation type within survey area

4.2.3 Vegetation Condition

Vegetation condition on site ranged from Completely Degraded to Excellent (Table 5, Figure 6). The majority of the site is classified in Excellent (49.6%) and Very Good (30.7%) condition. The areas of the site in Completely Degraded condition contained areas of no native vegetation, high weed presence and have been subject to previous disturbances associated with landfilling activities.

Table 5: Vegetation condition within survey area

Vegetation Condition	Pristine	Excellent	Very Good	Good	Degraded	Completely Degraded	Total
Area (ha)	0	1.34	0.83	0	0.12	0.41	2.7
Area (%)	0	49.6	30.7	0	4.5	15.2	100

4.2.4 Threatened and Priority Communities

Eucalypt Woodlands of the Western Australian Wheatbelt were identified as potentially occurring within the survey area when the desktop analysis was undertaken. The Wheatbelt Woodlands TEC is recognised by the below key diagnostic features (Commonwealth of Australia, 2016):

- Occurs within the Eucalypt Woodlands of the WA Wheatbelt region of Western Australian, although this has some exceptions including, it does not include woodlands which are dominated by mallee trees.
- Patch size requirements for areas which are not located on roadsides:
 - A minimum of 2 ha in size:
 - high quality native vegetation with no more than 30% total vegetation cover of introduced (weed) species, or
 - introduced plant species account for over 30 to 50% total vegetation understorey cover AND mature trees are present, with at least 5 mature trees per half hectare. Mature trees are to have a diameter at breast height (DBH) of 30 cm or greater.
 - A minimum of 5 ha in size:
 - introduced (weed) species coverage of 30 to 50% total vegetation understorey, no less than 5 mature trees present per half hectare, or
 - introduced species account for over 50 to 70% total vegetation understorey cover and mature trees are present, with at least 5 such trees per half hectare.

The field survey determined that all the trees present within the survey boundary were mallees and therefore does not meet the requirement for this area to be classified as the Eucalypt Woodlands of the Western Australian Wheatbelt TEC. The key diagnostic features for at least 5 mature trees per hectare with a DBH of >30 cm was also not met on site. Although many species present are those classified as present within WA Wheatbelt Woodlands ecological communities and are identified in the species list provided in Appendix 6.

5.0 Fauna Survey Results

5.1 Desktop Survey

A desktop survey of online databases indicated the potential for a total of 18 conservation significant fauna species to occur within 10 km of the survey area (Table 6). NatureMap indicated four conservation significant species listed under the *Biodiversity Conservation Act 2016* (WA) as potentially occurring within a 10 km radius of the site (DBCA, 2021a) (Appendix 1). The Protected Matters Search Tool (PMST) indicated eight threatened species listed under the *EPBC Act 1999* (Cwlth) as potentially occurring within the 10 km radius of the site (DAWE, 2021) (Appendix 2). A review of the DBCA threatened and priority fauna species database indicated the potential for 14 conservation significant fauna species to occur within the 10 km radius of the site (DBCA, 2021c).

Both abiotic (soil, climate) as well as biotic (food resources, predator pressure) factors will determine the suitability of habitats for specific fauna assemblages, based on their ecological requirements. Evaluating the site locality, existing conditions and known home ranges, Natural Area determined that there is the potential for four bird species and one invertebrate species to be present within the survey site (highlighted green in Table 6).

Table 6: Threatened and Priority fauna species listed by NatureMap, PMST and DBCA

5.2 Fauna Survey Results

A total of 18 fauna species were recorded during the November 2021 survey, either directly or via indication of their presence (Table 7, Figure 7). Of the species observed, 13 were birds, two were reptiles, and three were mammals. The mammals included two introduced species, the Red Fox (**Vulpes vulpes*) and Feral Cat (**Felis catus*). The Red Fox and Feral Cats are a category C3 declared pest under the *Biosecurity and Agriculture Management Act 2007* (BAM Act) (WA) and is required to be managed by the landholder/manager to limit their impact. Several cats at different stages of development (adults and kittens) were observed through direct observations and on trail cameras.

Table 7: Fauna observations within the survey site. * denotes introduced species

Family	Species Name	Common Name
Birds		
Meliphagidae	<i>Anthochaera carunculata</i>	Red Wattlebird
Motacillidae	<i>Anthus australis</i>	Australian Pipit
Artamidae	<i>Artamus cinereus</i>	Black-faced Woodswallow
Psittaculidae	<i>Barnardius zonarius</i>	Australian Ringneck
Pachycephalidae	<i>Colluricincla harmonica</i>	Grey Shrikethrush
Corvidae	<i>Corvus coronoides</i>	Australian Raven
Artamidae	<i>Cracticus nigrogularis</i>	Pied Butcherbird
Cacatuidae	<i>Eolophus roseicapilla</i>	Galah
Monarchidae	<i>Grallina cyanoleuca</i>	Magpie-lark
Artamidae	<i>Gymnorhina tibicen</i>	Australian Magpie
Meliphagidae	<i>Lichmera indistincta</i>	Brown Honeyeater
Psittaculidae	<i>Neophema elegans</i>	Elegant Parrot
Rhipiduridae	<i>Rhipidura leucophrys</i>	Willie Wagtail
Reptile		
Scincidae	<i>Tiliqua rugosa</i>	Bobtail

Family	Species Name	Common Name
Varanidae	<i>Varanus sp.</i>	(Diggings and scratches on Eucalypts)
Mammal		
Macropodidae	<i>Macropus fuliginosus melanops</i>	Western Grey Kangaroo (scat)
Canidae	* <i>Vulpes vulpes</i>	Red Fox
Felidae	* <i>Felis catus</i>	Feral Cat (minimum 2 adults and several kittens)

Feral Cat
(**Felis catus*)

Red Fox
(**Vulpes vulpes* - scat)

Figure 7: Fauna species observed, including direct and indirect indication of presence. *Denotes introduced species

5.3 Fauna Habitat

A cockatoo habitat assessment was undertaken to determine if the survey area contained potential habitat for threatened black cockatoos and the presence of foraging habitat for these species. The assessment found no suitable habitat trees within the survey area as there were no trees that met the habitat tree size requirements of diameter at breast height (DBH) of greater than 500 mm. *Eucalyptus* sp. (all classified as mallee) are present throughout the survey with the potential for low quality foraging sources to be present. No signs of foraging by black cockatoos were observed within the survey boundary and no individuals or other signs of their presence were observed during the survey. Based on distant observation, the adjacent reserve to the survey area appears to contain larger Eucalypt trees which may provide suitable habitat.

Good quality habitat within the site is present for reptiles, invertebrates and small bird species in the form of differing vegetation structural layers which provide shelter, food sources and nesting capacity in the canopy of the mallees present (Figure 8). Logs and leaf litter were also present within the site which provides habitat for reptiles and invertebrates.

Figure 8: Nesting of bird species within the survey site

6.0 Implications of Results

6.1 Flora and Vegetation

Natural Area's November 2021 survey recorded a total of 114 flora species (taxa) from 34 families which includes 23 (20.2%) introduced (weed) species and 91 (79.8%) native species. One vegetation type was present across the entire survey area, Mixed *Eucalyptus* Open Mallee Woodland. Vegetation condition across the site ranged from Completely Degraded to Excellent, with the majority of the site in Excellent (49.6%) and Good (30.7%) condition. Areas within the site classified as Completely Degraded contained areas of no native vegetation, high weed presence and have been subject to previous disturbances associated with landfilling activities.

6.2 Significant Flora

No threatened or priority flora species were identified during the November 2021 survey. The DBCA searches did not identify any threatened or priority species within the site boundary (DBCA 2021c) with the closest record occurring 1.5 km to the south. An orchid species was recorded during the survey, *Diuris* sp. which was unable to be identified to species level as the plant had already sensed. It is considered unlikely that this species is conservation significant flora as there are no previous records for this genus, within the region of the survey.

6.3 Threatened Ecological Communities

Eucalypt Woodlands of the Western Australian Wheatbelt was identified as potentially occurring within the survey area through the DBCA database search and the PMST results. As the results of the field survey determined that all the trees present within the survey boundary were mallees and therefore do not meet the requirement for this area to be classified as the Eucalypt Woodlands of the Western Australian Wheatbelt TEC.

6.4 Fauna

A total of 18 fauna species were recorded during the survey, including 13 birds (all native), two reptiles (both native), and three mammals (one native, two introduced). The two introduced mammals, the Red Fox (**Vulpes vulpes*) and Feral Cat (**Felis catus*), are listed as category C3 declared pests under the *BAM Act 2007* (WA) and require control by landowners and/or managers to reduce harmful impacts of the organism, reduce its number and contain the spread of the species. It is recommended to control the populations of feral cats within the site to limit the impact of these species on small mammals and reptiles and to prevent the spread into the adjacent reserve. Survey observations found no conservation significant or priority native fauna species or signs of their presence at the time of the survey.

The cockatoo habitat assessment found no potential habitat for nesting or roosting within the survey area as all trees present across the site did not meet the habitat tree size requirements of diameter at breast height (DBH) of 500 mm and greater. These trees may provide low quality food sources for threatened black cockatoos that are likely in the region although no evidence of feeding by cockatoo was recorded at the time of the assessment. Based on distant observation, the adjacent reserve to the survey area appears to contain larger Eucalypt trees which may provide more suitable habitat of a higher quality. The survey site does contain good quality habitat for reptiles, invertebrates and small bird species.

6.5 Assessment Against Clearing Principles

An assessment of information obtained during the 2021 survey has been made against the Western Australian clearing principles. It is suggested that the clearing application may be at variance to two of the ten clearing principles, principles A and E (Table 8). The proposed clearing occurs within the Western Australian Wheatbelt which is an area that has already been extensively cleared, the site has Excellent vegetation condition, has a high diversity of species, if clearing of the site is approved additional requirements/conditions may be placed on the clearing permit.

Table 8: Assessment against clearing principles

Clearing Principle	Comment
A Native vegetation should not be cleared if it comprises a high level of biological diversity.	The proposed area may be at variance with this principle: <ul style="list-style-type: none">■ a total of 114 flora species were identified, including 91 (79.8%) native species and 23 (20.2%) introduced species, this shows a high flora diversity for the site<ul style="list-style-type: none">▪ one vegetation type was determined within the survey site, Mixed Eucalyptus Open Woodland▪ the majority of the site was in Excellent condition (49.6%) and Good condition (30.7%)▪ during the November 2021 survey by Natural Area, no conservation significant flora was identified within the survey boundary and no records of conservation significant flora are recorded in DBCA database searches (DBCA 2021c).
B Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.	The proposed area to be cleared is not likely to be at variance with this principle: <ul style="list-style-type: none">■ a total of 18 fauna species were recorded during the November 2021 survey, no conservation significant fauna was identified during the survey<ul style="list-style-type: none">▪ no habitat trees for threatened black cockatoos with a diameter at breast height (DBH) >500 mm were present within the site, and no evidence of feeding was recorded during the survey.▪ <i>Eucalyptus</i> sp. (all classified as mallee) trees are present throughout the survey site which potentially provides low quality foraging sources for black cockatoos.
C Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.	The proposed area to be cleared is not likely to be at variance with this principle: <ul style="list-style-type: none">■ no conservation significant flora was identified during Natural Area's November 2021 survey■ no rare or priority flora was identified as occurring within the site through DBCA (2021c) database searches with the closest record occurring approximately 1.5 km south of the southern boundary of the site.
D Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.	The proposed area to be cleared is not considered to be at variance with this principle: <ul style="list-style-type: none">■ No threatened or priority ecological communities were identified during the November 2021 survey, although through desktop analysis and results of DBCA database search the did identify the area as potentially occurring within the Eucalypt Woodlands of the Western Australian Wheatbelt TEC

Clearing Principle	Comment
E Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.	<ul style="list-style-type: none"> ▪ All Eucalypt trees present within the site are mallees and therefore does not meet the requirements to be classified as Eucalypt Woodlands of the Western Australian Wheatbelt ▪ The proposed area to be cleared is likely to be at variance with this principle: <ul style="list-style-type: none"> ▪ The site is located within the WA Wheatbelt which has been extensively cleared for agricultural purposes. ▪ The site is located immediately adjacent to a reserve which covers approx. 27 ha, although in the wider landscape context it has been extensively cleared.
F Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.	<ul style="list-style-type: none"> ▪ The proposed area to be cleared is not likely to be at variance with this principle: <ul style="list-style-type: none"> ▪ No water course or wetland and associated riparian vegetation was identified as occurring within the site during the 2021 survey. ▪ Adjacent to the survey area within the active landfill operating portion there is a main made water storage pond which at the time of the survey contained water. ▪ The closest wetland/waterbodies to the site are Lake Stubbs, occurring approx. 2.8 km to the west and approx. 1.5 km to the south is the start of the salt lake system which surrounds the town of Newdegate.
G Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.	<ul style="list-style-type: none"> ▪ The proposed area to be cleared is not likely to be at variance with this principle as it is not expected to cause further land degradation with the surrounding landscape subjected to current agricultural practices and the norther portion of Lot 1 already comprising of an active landfill and waste collection facility.
H Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.	<ul style="list-style-type: none"> ▪ The proposed area to be cleared is not likely to be at variance with this principle as it is not expected to have an impact on adjacent environmental values or nearby conservation reserve. <ul style="list-style-type: none"> ▪ Land use surrounding the site consists of agricultural land which has been previously cleared for farming purposes ▪ Immediately adjacent to the site is an unclassified vegetated area with clearing of vegetation not expected to have negative impacts on this area.

Clearing Principle	Comment
I Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.	The area to be cleared is not likely to be at variance with this principle as it is not expected to cause deterioration in water quality of surface or groundwater. <ul style="list-style-type: none">▪ No surface water was present within the proposed clearing are during the 2021 survey.▪ The northern proportion of Lot 1 is currently operating as a waste collection and landfilling facility.▪ Adjacent to the survey area within the active landfill operating portion of Lot 1 there is a main made water storage pond present.
J Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence of flooding.	The area to be cleared is not likely to be at variance with this principle as portions of Lot 1 already comprising of an active landfill and waste collection facility with the expansion of this facility should take into account water runoff management. Flooding is not expected to occur as the current landfill site is located adjacent to a larger vegetated portion of land on two side and a road reserve on the other two.

Name ID	Species Name	Naturalised	Conservation Code	¹ Endemic To Query Area
---------	--------------	-------------	-------------------	------------------------------------

Conservation Codes

- R - Rare or likely to become extinct
- X - Presumed extinct
- IA - Protected under international agreement
- S - Other specially protected fauna
- 1 - Priority 1
- 2 - Priority 2
- 3 - Priority 3
- 4 - Priority 4
- 5 - Priority 5

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

Appendix 2: PMST Report 10km

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about [Environment Assessments](#) and the EPBC Act including significance guidelines, forms and application process details.

Report created: 10/11/21 12:40:28

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	1
Listed Threatened Species:	19
Listed Migratory Species:	6

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	1
Commonwealth Heritage Places:	None
Listed Marine Species:	11
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	None
Regional Forest Agreements:	None
Invasive Species:	11
Nationally Important Wetlands:	None
Key Ecological Features (Marine)	None

Details

Matters of National Environmental Significance

Listed Threatened Ecological Communities	[Resource Information]	
For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.		
Name	Status	Type of Presence
Eucalypt Woodlands of the Western Australian Wheatbelt	Critically Endangered	Community likely to occur within area
Listed Threatened Species	[Resource Information]	
Name	Status	Type of Presence
Birds		
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calyptorhynchus latirostris		
Carnaby's Cockatoo, Short-billed Black-Cockatoo [59523]	Endangered	Breeding likely to occur within area
Falco hypoleucus		
Grey Falcon [929]	Vulnerable	Species or species habitat may occur within area
Leipoa ocellata		
Malleefowl [934]	Vulnerable	Species or species habitat known to occur within area
Mammals		
Dasyurus geoffroii		
Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat may occur within area
Parantechinus apicalis		
Dibbler [313]	Endangered	Species or species habitat may occur within area
Phascogale calura		
Red-tailed Phascogale, Red-tailed Wambenger, Kenngoor [316]	Vulnerable	Species or species habitat likely to occur within area
Pseudomys shortridgei		
Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat likely to occur within area
Plants		
Acacia auratiflora		
Orange-flowered Wattle [64824]	Endangered	Species or species habitat may occur within area
Acacia lanuginophylla		
Woolly Wattle [55575]	Endangered	Species or species habitat likely to occur within area

Name	Status	Type of Presence
<u>Caladenia graniticola</u> Pingaring Spider-orchid, Granite Spider-orchid [84996]	Endangered	Species or species habitat may occur within area
<u>Caladenia hoffmannii</u> Hoffman's Spider-orchid [56719]	Endangered	Species or species habitat may occur within area
<u>Duma horrida subsp. abdita</u> Remote Thorny Lignum [87538]	Critically Endangered	Species or species habitat may occur within area
<u>Eremophila verticillata</u> Whorled Eremophila [7032]	Endangered	Species or species habitat likely to occur within area
<u>Grevillea involucrata</u> Lake Varley Grevillea [4631]	Endangered	Species or species habitat may occur within area
<u>Ricinocarpus trichophorus</u> Barrens Wedding Bush [19931]	Endangered	Species or species habitat likely to occur within area
<u>Roycea pycnophylloides</u> Saltmat [21161]	Endangered	Species or species habitat likely to occur within area
<u>Tetratheca aphylla</u> Bungalbin Tetratheca [2915]	Vulnerable	Species or species habitat may occur within area
<u>Verticordia staminosa var. cylindracea</u> Granite Featherflower [55823]	Endangered	Species or species habitat likely to occur within area

Listed Migratory Species

[[Resource Information](#)]

Name	Threatened	Type of Presence
Migratory Marine Birds		
<u>Apus pacificus</u> Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Migratory Terrestrial Species		
<u>Motacilla cinerea</u> Grey Wagtail [642]		Species or species habitat may occur within area
Migratory Wetlands Species		
<u>Actitis hypoleucus</u> Common Sandpiper [59309]		Species or species habitat may occur within area
<u>Calidris acuminata</u> Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
<u>Calidris ferruginea</u> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
<u>Calidris melanotos</u> Pectoral Sandpiper [858]		Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Commonwealth Land

[Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Extra Information

Invasive Species

[Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resources Audit, 2001.

Name	Status	Type of Presence
Birds		
<i>Anas platyrhynchos</i> Mallard [974]		Species or species habitat likely to occur within area
<i>Streptopelia senegalensis</i> Laughing Turtle-dove, Laughing Dove [781]		Species or species habitat likely to occur within area
Mammals		
<i>Canis lupus familiaris</i> Domestic Dog [82654]		Species or species habitat likely to occur within area
<i>Capra hircus</i> Goat [2]		Species or species habitat likely to occur within area
<i>Felis catus</i> Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur within area
<i>Mus musculus</i> House Mouse [120]		Species or species habitat likely to occur within area
<i>Oryctolagus cuniculus</i> Rabbit, European Rabbit [128]		Species or species habitat likely to occur within area
<i>Sus scrofa</i> Pig [6]		Species or species habitat likely to occur within area
<i>Vulpes vulpes</i> Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
<i>Asparagus asparagoides</i> Bridal Creeper, Bridal Veil Creeper, Smilax, Florist's Smilax, Smilax Asparagus [22473]		Species or species habitat likely to occur within area
<i>Tamarix aphylla</i> Athel Pine, Athel Tree, Tamarisk, Athel Tamarisk, Athel Tamarix, Desert Tamarisk, Flowering Cypress, Salt Cedar [16018]		Species or species habitat likely to occur within area

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

Appendix 3: Conservation Codes

Western Australia

Conservation Code	Name	Description
T	Threatened	Flora or fauna that is rare or likely to become extinct, ranked according to their level of threat using IUCN Red List criteria (Schedules 1-3 of the Wildlife Conservation (Specially Protected Fauna) Notice or the Wildlife Conservation (Rare Flora) Notice)
CR	Critically endangered	Species considered to be facing an extremely high risk of extinction within the wild in the immediate future
EN	Endangered	Species considered to be facing a very high risk of extinction in the wild in the near future
VU	Vulnerable	Species considered to be facing a high risk of extinction in the wild in the medium-term future
EX	Extinct Species	Species where ‘there is no reasonable doubt that the last member of the species has died (Schedule 4 of the Wildlife Conservation (Specially Protected Fauna) Notice or the Wildlife Conservation (Rare Flora) Notice)
EW	Extinct in the Wild	Species that are known to only survive in cultivation, in captivity, or as a naturalised population well outside its past range; and it has not been recorded in its known or expected habitat at appropriate seasons anywhere in its past range, despite surveys over a timeframe appropriate to its life cycle and form
MI	Migratory Species	Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth (Schedule 5 of the Wildlife Conservation (Specially Protected Fauna) Notice)
CD	Conservation Dependent	Species of special conservation interest (conservation dependent fauna), being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened (Schedule 6 of the Wildlife Conservation (Specially Protected Fauna) Notice)
OS	Specially Protected	Fauna otherwise in need of special protection to ensure their conservation (Schedule 7 of the Wildlife Conservation (Specially Protected Fauna) Notice)
P	Priority Species	Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or

Conservation Code	Name	Description
		flora. Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.
P1	Priority One	Poorly known species – Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either very small or on lands not managed for conservation, such as road verges, urban areas, farmland, active mineral lease and under threat of habitat destruction or degradation.
2	Priority Two	Poorly known species – Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, such as national parks, conservation parks, nature reserves, State forest, vacant Crown land, water reserves and similar.
3	Priority Three	Poorly known species – Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat
4	Priority Four	Rare or near threatened and other species in need of monitoring.

Appendix 4: Significant Flora Species Guide

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
	<i>Acacia aurajiflora</i> D. Papenfus	Spreading shrub, 0.3-1 m high, to 2 m wide. Fl. Yellow.	Jul to Aug.	Sandy clay, clay, clayey loam. Plains, wet depressions.	E	Unlikely – habitat not suitable
	<i>Acacia depressa</i>	Prostrate, dense, prickly shrub, 0.02- 0.15 m high. Fl. Yellow.	Dec or Jan.	Lateritic gravelly soils. Low hills & rises.	T	Habitat may be suitable

Photos: S.D. Hopper & I. Sweeneyman

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
<i>Acacia drewniana</i> subsp. <i>minor</i>	 	Spreading shrub, 0.15-0.5 m high. Fl. yellow	May to Jul.	Sandy & gravelly soils.	P2	Habitat may be suitable
<i>Acacia lanuginosa</i>	 	Dense shrub, 0.5- 1.2 m high. Fl. Yellow.	Jul to Oct.	White/grey sand, clayey sand, gravelly soils. Flats, along drainage lines.	E	Unlikely – habitat not suitable

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
<i>Acacia sclerophylla</i> subsp. <i>pulvinata</i>		Dense, rounded, resinous shrub, 0.75-1.8 m high.	Fl. yellow, Jul to Aug.	Gravelly sand or clay. Laterite hills, gravelly ridges.	P3	Habitat may be suitable

Acacia sclerophylla var. *teretiuscula*

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
<i>Acacia singula</i>	 	Shrub, 0.35-2 m high.	Fl. Yellow. Aug to Oct.	Gravelly sand over laterite, white or yellow sand. Rises, hilltops.	P3	Habitat may be suitable
<i>Banksia idiogenes</i>	 	Tufted, non-lignotuberous shrub, to 0.5(-0.7) m high. Fl.	Aug.	Sandy loam over gravel.	P2	Habitat may be suitable

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
		Prostrate shrub, to 0.45 m high. Fl. Yellow.	Jul to Oct.	Sandy loam over gravel.	P3	Habitat may be suitable
		Often sprawling, lignotuberous shrub, to 1 m high, sometimes suckering. Fl. Yellow.	Sep to Oct.	Sandy loam, usually over laterite. Sandplains.	P3	Habitat may be suitable

Banksia rufa subsp. *chelomacarpa*

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood		
	<i>Eremophila veneta</i>	Metallic-flowered Eremophila	Spreading or straggly shrub, 0.3- 1.2 m high, to 1.8 m wide. Fl. green & yellow & purple.	Oct to Nov.	Clay to loam, white/grey sand. Plains & flats, slopes.	P4	Unlikely – habitat not suitable	
	<i>Eremophila verticillata</i>		Whorled Eremophila	Low spreading shrub, up to 0.8 m high, to 1 m wide. Fl. purple-violet.	Nov to Dec.	Clay loam, loam over limestone.	E	Unlikely – habitat not suitable

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
<i>Eucalyptus mimica</i> subsp. <i>continens</i>	Hooded Mallet	(Mallee) or tree, 2-6 m high, bark smooth. Fl. Cream.	Jan.	Sand, sandy clay. Flats, moist areas.		Habitat may be suitable
<i>Eucalyptus mimica</i> subsp. <i>mimica</i>	Newdegate Mallet	Upright, spreading (mallee), 3.5-8 m high, bark smooth, grey-brown to shiny coppery with detached brown curls at the base.		White to brown sandy clay, pink to white clayey loam. Flats, near salt lakes.	P3	Unlikely – habitat not suitable
<i>Eucalyptus ornata</i>	Ornamental Silver Mallet	Tree, 6-10 m high, bark smooth, grey. Fl. white.		Laterite. Ridges.	P3	Habitat may be suitable
<i>Fitzwillia axilliflora</i>		Ascending to erect annual, herb, 0.03-0.135 m high. Fl. White.	Sep to Nov.	Margins of salt lakes, saline flats.	P2	Unlikely – habitat not suitable
<i>Gastrolobium cruciatum</i>		Spreading shrub, to 0.5 m high. Fl. Yellow & red.	Sep.	Sand & clayey sand with gravel, rocky loams, laterite. Flats, gently undulating areas.	P3	Unlikely – habitat not suitable
<i>Gastrolobium euryphyllum</i>		Slender, erect, glaucous shrub, to 2.5 m high. Fl. orange-yellow.	Sep to Dec or Jan.	Sand over laterite. Rolling sand dunes.		Unlikely – habitat not suitable

Species	Common Name	Description	Flowering Period	Habitat Type	Cons Code	Likelihood
  	<i>Grevillea involucrata</i> Photos: A.S. George & S.D. Hopper	Prostrate to low-domed open shrub, 0.15-0.3 m high, up to 2 m wide. Fl. pink/pink-red.	Jun or Oct.	Gravelly sand.	E	Habitat may be suitable
   	<i>Pallarup Grevillea</i> Photos: M.Graham & M.Hancock	Loose, prostrate shrub, 0.04-0.1 m high, 0.8-1.2 m wide. Fl. cream-white/pink-red.	Aug to Dec or Jan.	White, grey or yellow sand, gravel. Sandplains.	P4	Habitat may be suitable
 	<i>Guichenotia asteriskos</i> Photos: M.Graham & M.Hancock	Erect, compact shrub, ca 0.35 m high. Fl. White.	Sep to Oct.	Sandy clay or loam with gravel.	P2	Unlikely – habitat not suitable

Appendix 6: Species List

The complete flora list for the site is provided in the table below. *Denotes introduced species.

Family	Species	Common Name	WA Wheatbelt Woodland TEC Species
Fabaceae	<i>Acacia acanthaster</i>		
Fabaceae	<i>Acacia acanthoclada</i> subsp. <i>acanthoclada</i>		
Fabaceae	<i>Acacia chrysopoda</i>		
Fabaceae	<i>Acacia hemiteles</i>		
Fabaceae	<i>Acacia iteaphylla</i> *		
Fabaceae	<i>Acacia merrallii</i>		X
Fabaceae	<i>Acacia multispicata</i>		
Fabaceae	<i>Acacia saligna</i>	Orange Wattle	
Fabaceae	<i>Acacia sulcata</i>		
Poaceae	<i>Aira cupaniana</i> *	Silvery Hairgrass	
Casuarinaceae	<i>Allocasuarina campestris</i>		X
Casuarinaceae	<i>Allocasuarina huegeliana</i>	Rock Sheoak	X
Asteraceae	<i>Angianthus tomentosus</i>	Camel-grass	
Goodeniaceae	<i>Anthotium rubriflorum</i>	Red Anthotium	
Chenopodiaceae	<i>Atriplex semibaccata</i>	Berry Saltbush	
Poaceae	<i>Austrostipa elegantissima</i>		X
Poaceae	<i>Austrostipa hemipogon</i>		X
Poaceae	<i>Austrostipa variabilis</i>		
Poaceae	<i>Avena barbata</i> *	Bearded Oat	
Euphorbiaceae	<i>Beyeria sulcata</i> var. <i>gracilis</i>		
Asteraceae	<i>Blennospora drummondii</i>		X
Rutaceae	<i>Boronia inornata</i> subsp. <i>leptophylla</i>		
Boryaceae	<i>Borya sphaerocephala</i>	Pincushions	X
Brassicaceae	<i>Brassica tournefortii</i> *	Mediterranean Turnip	
Poaceae	<i>Bromus diandrus</i> *		
Myrtaceae	<i>Callistemon citrinus</i> *	Kings Park Special 'Bottlebrush	
Cupressaceae	<i>Callitris preissii</i> *	Rottnest Island Pine	X
Lauraceae	<i>Cassytha melantha</i>	Large Dodder-laurel	

Family	Species	Common Name	WA Wheatbelt Woodland TEC Species
Gentianaceae	<i>Centaurium tenuiflorum</i> *		
Pittosporaceae	<i>Cheiranthera brevifolia</i>		
Polygalaceae	<i>Comesperma scoparium</i>	Broom Milkwort	
Goodeniaceae	<i>Coopernookia strophiolata</i>		
Crassulaceae	<i>Crassula colorata</i>	Dense Stonecrop	
Crassulaceae	<i>Crassula colorata</i> var. <i>colorata</i>		
Rhamnaceae	<i>Cryptandra myriantha</i>		
Poaceae	<i>Cynodon dactylon</i> *	Couch	
Cyperaceae	<i>Cyperus eragrostis</i> *	Umbrella Sedge	
Goodeniaceae	<i>Dampiera eriocephala</i>	Woolly-headed Dampiera	
Fabaceae	<i>Daviesia incrassata</i> subsp. <i>teres</i>		
Hemerocallidaceae	<i>Dianella revoluta</i>	Blueberry Lily	
Orchidaceae	<i>Diuris</i> sp.	(No Threatened or Priority species in the region)	
Chenopodiaceae	<i>Enchytraea lanata</i>		X
Scrophulariaceae	<i>Eremophila drummondii</i>	Drummond's Eremophila	
Scrophulariaceae	<i>Eremophila phillipsii</i>		
Myrtaceae	<i>Ericomyrtus serpyllifolia</i>		
Myrtaceae	<i>Eucalyptus myriadena</i>		X
Myrtaceae	<i>Eucalyptus rigidula</i>		
Myrtaceae	<i>Eucalyptus sheathiana</i>		X
Myrtaceae	<i>Eucalyptus tenera</i>	Common Southern Mallee	X
Fabaceae	<i>Gastrolobium parviflorum</i>		X
Asteraceae	<i>Gazania linearis</i> *		
Haloragaceae	<i>Glischrocaryon aureum</i>	Common Popflower	
Goodeniaceae	<i>Goodenia helmsii</i>		
Proteaceae	<i>Grevillea acacioides</i>		
Proteaceae	<i>Grevillea acuria</i>		X
Proteaceae	<i>Grevillea didymobotrya</i> subsp. <i>didymobotrya</i>		
Proteaceae	<i>Grevillea huegelii</i>		X
Proteaceae	<i>Grevillea pectinata</i>	Comb-leaved Grevillea	

Family	Species	Common Name	WA Wheatbelt Woodland TEC Species
Proteaceae	<i>Hakea scoparia</i>		
Proteaceae	<i>Hakea scoparia</i> subsp. <i>scoparia</i>		
Asteraceae	<i>Hypochaeris glabra</i> *	Smooth Cats-ear	
Cyperaceae	<i>Lepidosperma costale</i>		
Cyperaceae	<i>Lepidosperma fimbriatum</i>		
Cyperaceae	<i>Lepidosperma sanguinolentum</i>		
Santalaceae	<i>Leptomeria preissiana</i>		X
Myrtaceae	<i>Leptospermum erubescens</i>	Roadside Teatree	X
Myrtaceae	<i>Leptospermum nitens</i>		
Styliadiaceae	<i>Levenhookia pusilla</i>	Midget Stylewort	
Campanulaceae	<i>Lobelia cleistogamoides</i>		
Poaceae	<i>Lolium rigidum</i> *	Wimmera Ryegrass	
Chenopodiaceae	<i>Maireana brevifolia</i>	Small Leaf Bluebush	X
Malvaceae	<i>Malva parviflora</i> *	Marshmallow	
Myrtaceae	<i>Melaleuca hamata</i>		X
Myrtaceae	<i>Melaleuca johnsonii</i>		
Myrtaceae	<i>Melaleuca marginata</i>		X
Myrtaceae	<i>Melaleuca tuberculata</i> var. <i>macrophylla</i>		
Aizoaceae	<i>Mesembryanthemum crystallinum</i> *	Iceplant	
Orchidaceae	<i>Microtis media</i>	Tall Mignonette Orchid	
Asteraceae	<i>Monoculus monstrosus</i> *		
Poaceae	<i>Neurachne alopecuroidea</i>	Foxtail Mulga Grass	X
Asteraceae	<i>Onopordum acanthium</i> *	Scotch Thistle	
Asteraceae	<i>Osteospermum sp.</i> *		
Asteraceae	<i>Ozothamnus leptophyllum</i>	Scaly-leaved Everlasting	
Asteraceae	<i>Panaetia lessonii</i>		
Poaceae	<i>Parapholis incurva</i> *	Coast Barbgrass	
Proteaceae	<i>Persoonia quinquenervis</i>		
Rutaceae	<i>Phebalium filifolium</i>		X
Asteraceae	<i>Podotheca angustifolia</i>	Sticky Longheads	X
Lamiaceae	<i>Prostanthera semiteres</i>		

Family	Species	Common Name	WA Wheatbelt Woodland TEC Species
Poaceae	<i>Rytidosperma caespitosum</i>		X
Santalaceae	<i>Santalum acuminatum</i>	Quandong	X
Cyperaceae	<i>Schoenus nanus</i>	Tiny Bog Rush	
Chenopodiaceae	<i>Sclerolaena diacantha</i>	Grey Copperburr	X
Solanaceae	<i>Solanum nigrum</i> *	Black Berry Nightshade	
Asteraceae	<i>Sonchus asper</i> *	Rough Sowthistle	
Poaceae	<i>Stenotaphrum secundatum</i> *	Buffalo Grass	
Styliadiaceae	<i>Styliodium dichotomum</i>	Pins-and-needles	
Styliadiaceae	<i>Styliodium involucratum</i>		
Ericaceae	<i>Styphelia serratifolia</i>		
Fabaceae	<i>Templetonia rossii</i>		
Myrtaceae	<i>Tetrapora preissiana</i>		
Asparagaceae	<i>Thysanotus patersonii</i>		X
Araliaceae	<i>Trachymene cyanopetala</i>		X
Araliaceae	<i>Trachymene pilosa</i>	Native Parsnip	X
Asteraceae	<i>Ursinia anthemoides</i> *	Ursinia	
Myrtaceae	<i>Verticordia chrysanthia</i>		
Myrtaceae	<i>Verticordia chrysanthella</i>		
Myrtaceae	<i>Verticordia eriocephala</i>	Common Cauliflower	
Myrtaceae	<i>Verticordia picta</i>	Painted Featherflower	
Myrtaceae	<i>Verticordia roei</i> subsp. <i>roei</i>		
Asteraceae	<i>Waitzia acuminata</i>	Orange Immortelle	X
Asteraceae	<i>Waitzia acuminata</i> var. <i>albicans</i>		
Lamiaceae	<i>Westringia cephalantha</i> var. <i>caterva</i>		
Lamiaceae	<i>Westringia rigida</i>	Stiff Westringia
