Flora and Fauna Significance Assessment

North Jindong Road, North Jindong

22 November 2021

Prepared for:
City of Busselton

Limitations Statement

This report has been prepared in accordance with the Agreement between Ecosystem Solutions Pty Ltd and the City of Busselton (“Client”). It has been solely prepared to facilitate road widening at Jindong Road North, Jindong (“Site”).

Information

In undertaking this work the authors have made every effort to ensure the accuracy of the information used. Unless otherwise stated in the report, Ecosystem Solutions Pty Ltd has not independently verified such information and cannot guarantee its accuracy or completeness.

Conclusions

Within the limitations imposed by the scope of work, preparation of this report has been undertaken and performed in a professional manner, in accordance with generally accepted practices and using a degree of skill and care ordinarily exercised by reputable ecological consultants under similar circumstances. No other warranty, expressed or implied, is made.

Reliance

This report is solely for the use of the Client and any reliance on this report by third parties will be **at such party’s sole risk**. This report must only be presented in full and may not be used to support any other purpose than those set out in the report and the Agreement, except where prior written approval with comments are provided by Ecosystem Solutions Pty Ltd. All intellectual property rights in documents created by Ecosystem Solutions Pty Ltd remain the property of Ecosystem Solutions Pty Ltd.

Other parties should not rely on the report or the accuracy or completeness of any conclusions and should make their own enquiries and obtain independent advice in relation to such matters. Ecosystem Solutions Pty Ltd accepts no Liability, or responsibility whatsoever for or in respect of any use or reliance upon this report and its supporting material subsequently used by others. Please note that the contents of this report may not be directly applicable towards another **organisation’s needs** and may not contain sufficient information for purposes of other parties or for other uses.

Ecosystem Solutions Pty Ltd will not be liable to update or revise the report to take into account any events or emergent circumstances or facts occurring or becoming apparent after the date of this report.

1 Introduction

Ecosystem Solutions were contracted by the City of Busselton to survey a portion of North Jindong Road, North Jindong (SLK 0.38 to SLK 6.20, hereafter called the **“Site”**) **within the City of Busselton**, to document the presence and distribution of flora and fauna to facilitate the widening of this portion of the road.

The purpose of this report is to identify flora, fauna and assess vegetation within the Site to best protect the ecological valued of the Site in widening of the road.

The fauna species specifically targeted were the Western Ringtail Possum (*Pseudocheirus occidentalis*) and signs or suitable habitat for Black Cockatoo Species (*Calyptorhynchus baudinii*, *C. latirostis* and *C. banksii subsp. naso*) as well as any other significant fauna likely to occur within the proposed area of disturbance.

The flora elements specifically targeted includes Threatened and Priority species and Threatened or Priority Ecological Communities.

The flora and fauna assessments were limited to observing the species present during the time of the surveys.

2 Site Details

The Site is a portion of North Jindong Road, North Jindong approximately 5.82 km in length, within the City of Busselton (Figure 1).

The Site includes areas of remnant vegetation and previously cleared areas. Located at approximately 35 m AHD (Australian Height Datum) to the south, the Site slopes to the north at a lower elevation of 15 m AHD.

The surrounding area consists of rural lots with extensive areas that have been cleared for agricultural purposes, with small patches of remnant and planted vegetation.

Figure 1 Site Plan for the northern portion of North Jindong Road

3 Flora and Vegetation

3.1 Desktop Analysis

3.1.1 Landscape, Soils and Vegetation

Soil-Landscape systems are areas with recurring patterns of landforms, soils and vegetation and are used by the Department of Agriculture to maintain a consistent approach to land resource surveys.

Most of the Site is located within the Pinjarra Zone, consisting of *alluvial deposits (early Pleistocene to recent) between the Bassendean Dunes Zone and the Darling Scarp, colluvial and shelf deposits adjacent to the Darling Scarp.*

Soils of this zone are typically clayey to sandy alluvial soils with wet areas (Figure 2 and 3) (DPIRD, 2019). These soils are further classified as soil systems.

The Abba System represents the soils of the Site. This system is located on the southern Swan Coastal Plain and consists of deep, grey, sandy duplex and wet soils on poorly drained flats (DPIRD, 2019).

Within the Site, there are five sub-soil systems.

- Abba Flats Phase (213AbAB1) - Flats and low rises with sandy grey-brown duplex (Abba) and gradational (Busselton) soils.
- Abba Gentle Slopes (213AbAB2) - Very gently sloping terrain. Pale sandy earths, Semi-wet soils, Pale deep sands and Duplex sandy gravels
- Abba Vales Phase (213AbABv) - Small narrow depressions along drainage lines, alluvial soils.
- Abba Wet Flats (213AbABw) Winter wet flats and slight depressions with sandy grey-brown duplex (Abba) and gradational (Busselton) soils.
- Jindong Flats Phase (213AbJD1) - Well drained flats with sandy gradational, grey brown (Busselton) soils, some red brown sands and loams (Marybrook Soils).

The vegetation mapping of Havel and Matiske (2000) identifies the Site (Figure 4 and 5) as being located on the Abba Vegetation Complex (Heddle, Loneragan and Havel, 1980).

Updated Heddle et. al (1980) vegetation complex descriptions by Webb, Kinloch, Keighery & Pitt (2016) define the Abba Complex vegetation

- Abba Complex - is dominated by an open-forest of marri, jarrah, banksia and a woodland of marri with the presence of the occasional mountain gum adjacent to the Whicher Scarp. Common plant species include *Nuytsia floribunda*, *Kingia australis*, *Persoonia longifolia* and

Banksia grandis. The low-lying areas along the creeks and on the flood plains support a woodland of *E. rudis*, *Melaleuca* spp., with common species including *M. preissiana*, *M. raphiophylla*, *Regelia ciliata*, *Hypocalymma angustifolia*, *Pericalymma ellipticum*, *Hakea varia*, *Acacia saligna*, *Astartea scoparia*, *A. leptophylla*, *Viminaria juncea* and sedges of the *Chaetanthus*, *Schoenus*, *Hypolaena* and *Anarthria* genera.

Vegetation Complex statistics for the Swan Coastal Plain indicate the vegetation extent remaining of the Abba Complex to be 6.7%. (Webb, et al., 2016).

Figure 5 Vegetation Complex North Jindong Road, Jindong (south of Site)

3.1.2 Threatened and Priority Flora

Extracts from the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened Species Database, their Nature Base Database (Appendix A) and the Commonwealth Environmental Protection and Biodiversity Conservation (EPBC) Protected Matters Search Tool (Appendix B) were obtained to determine if records of any rare or threatened flora are known within the boundary or in vicinity of the Site. A reconnaissance survey of the results of the desktop study was conducted, consistent with a Reconnaissance Survey Flora and Vegetation Survey (EPA, 2016).

Species of flora and fauna are protected as defined in Table 1, have been determined that their populations are restricted geographically or threatened by local processes. DBCA recognizes these threats of extinction and consequently applies regulations towards population and species protection. Protected species are gazetted under the *Biodiversity Conservation Act (2016)* and therefore it is an **offence to “take” or damage rare flora without Ministerial approval. The act defines “to take” as “... to gather, pick, cut, pull up, destroy, dig up, remove or injure the flora or to cause or permit the same to be done by any means” (Government of Western Australia, 2010).**

Appendix C presents the definitions for conservation codes under the *Biodiversity Conservation Act (2016)* which was previously the *Wildlife Conservation Act 1950*.

3.1.3 Threatened and Priority Ecological Communities

An ecological community is a naturally occurring biological assemblage that occurs in a particular habitat. A Threatened Ecological Community (TEC) is one which is found to fit into one of the following categories: Presumed Totally Destroyed; Critically Endangered; Endangered, or Vulnerable.

Possible TECs that do not meet survey criteria are added to the Department of Parks and Wildlife’s Priority Ecological Community Lists, under Priority 1, 2 and 3. These are ranked in order of priority for survey and/or the definition of the community and evaluation of its conservation status.

3.2 Results

3.2.1 Threatened and Priority Flora

The DBCA Database/s identified 14 Threatened species, which are rare or are likely to become extinct, and 30 Priority listed species within a 10 km radius of the Site. The Protected Matters Search Tool identified 23 threatened species, within a 10 km radius of the Site. Four of those are considered Critically Endangered species, thirteen Endangered species and six Vulnerable species (Appendix A & B). An extract from the DBCA database was also obtained. The results for all database searches are summarised in Table 1.

Table 1 Conservation significant flora species recorded within 10 km of the Site.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Caladenia procera</i>	Herb	Alluvial loamy flats.	Threatened	Critically Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 2.9km east of the site collected in 2007.
<i>Grevillea brachystylis subsp. grandis</i>	Shrub	Narrow band, 10 km long, of degraded habitat at the base of Whicher Scarp. Brown lateritic clay loam soils in Marri woodland.	Threatened	Critically Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 5.2km south of the site collected in 2002.
<i>Banksia nivea subsp. uliginosa</i>	Shrub	Red, sandy, shallow loams over ironstone in thick scrub, in winter wet Southern and Scott ironstones.	Threatened	Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 9.4km northeast of the site collected in 1996.
<i>Caladenia busselliana</i>	Herb	Sandy loam. Winter-wet swamps.	Threatened	Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 5.4km west of the site collected in 2012.
<i>Caladenia viridescens</i>	Herb	Loam, grey sand.	Threatened	Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 9.9km east of the site collected in 2014.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Verticordia densiflora</i> <i>var. pedunculata</i>	Shrub	Light yellow or grey sands in low lying winter-wet areas.	Threatened	Endangered	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 6.3km southeast of the site collected in 2011.
<i>Verticordia plumosa</i> <i>var. ananeotes</i>	Shrub	Light yellow or grey sands in low lying winter wet areas.	Threatened	Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 6km south of the site.
<i>Verticordia plumosa</i> <i>var. vassensis</i>	Shrub	Variety of sands and swampy clay soils in mostly winter-wet flats and depressions.	Threatened	Endangered	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 5km east of the site collected in 1950.
<i>Banksia squarrosa</i> <i>subsp. argillacea</i>	Shrub	White/grey sand, gravelly clay or loam. Winter-wet flats, clay flats.	Threatened	Vulnerable	Species or species habitat known to occur within area. Naturemap database closest record is approximately 6.4km south of the site.
<i>Chamelaucium</i> sp. <i>S coastal plain</i> (<i>R.D. Royce 4872</i>)	Shrub	Winter-wet sandy clay sites in low woodlands and heathland.	Threatened	Vulnerable	Species or species habitat known to occur within area. Naturemap database closest record is approximately 2.9km south of the site collected in 1997.
<i>Daviesia elongata</i>	Shrub	Sand, laterite.	Threatened	Vulnerable	Species or species habitat known to occur within area Naturemap database closest record is approximately 5.8km west of the site collected in 1998.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Drakaea micrantha</i>	Herb	White-grey sand	Threatened	Vulnerable	Species or species habitat known to occur within area. Naturemap database closest record is approximately 10km southwest of the site collected in 2007.
<i>Caladenia excelsa</i>	Herb	White, grey or brown sands, sandy loams, loam, clay, laterite and granite. Hilltops, ridges, slopes, swales and low plains in deep pale yellow or grey sandy soils.	Threatened		Naturemap database closest record is approximately 13.4km southwest of the site collected in 2011.
<i>Hemigenia ramosissima</i>	Shrub	Lactric soils, clay. Granite Outcrops	Threatened		Naturemap database closest record is approximately 10.7km east of the site collected in 1992.
<i>Brachyscias verecundus</i>	Herb	Winter-wet clays over ironstone		Critically Endangered	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 26.2km east of the site.
<i>Lambertia echinata subsp. occidentalis</i>	Shrub	White sandy soils over laterite, orange/brown-red clay over ironstone. Flat to foothills, winter wet sites		Critically Endangered	Species or species habitat known to occur within area. Naturemap database closest record is approximately 9.6km northeast of the site.
<i>Synaphea sp. Fairbridge Farm (D. Papenfus 696)</i>	Shrub	Sandy with lateritic pebbles. Near winter wet flats, in low woodland with weedy grasses		Critically Endangered	Species or species habitat may occur within area. Naturemap database closest record is approximately 34km northeast of the site.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Caladenia hoffmanii</i>	Herb	Dense heath in clay loams on hillslopes and near breakaways and granite outcrops (Hopper & Brown, 2000).		Endangered	Species or species habitat may occur within area. Naturemap database closest record is approximately 40.3km southeast of the site collected in 1984.
<i>Caladenia huegelii</i>	Herb	Grey or brown sand, clay loam		Endangered	Species or species habitat may occur within area. Naturemap database closest record is approximately 4.2km northeast of the site collected in 1982.
<i>Drakaea elastica</i>	Herb	White or grey sand, low lying situations adjoining winter-wet swamps.		Endangered	Species or species habitat may occur within area. Naturemap database closest record is approximately 12km east of the site collected in 2009.
<i>Eucalyptus x phylacis</i>	Tree	Laterite, loam over granite. Coastal areas.		Endangered	Species or species habitat may occur within area. Naturemap database closest record is approximately 17km northwest of the site collected in 1988.
<i>Gastrolobium papilio</i>	Shrub	Sandy clay over ironstone and laterite. Flat plains		Endangered	Species or species habitat may occur within area. Naturemap database closest record is approximately 17.6km east of the site.
<i>Petrophile latericola</i>	Shrub	Winter-wet flats on red sandy clay over ironstone		Endangered	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 26.1km east of the site collected in 2019.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Diuris micrantha</i>	Herb	Dark, grey to blackish, sandy clay loams in winter wet depressions or swamps.		Vulnerable	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 68.5km northeast of the site collected in 2011.
<i>Tetraria australiensis</i>	Herb	Sand / sandy loam		Vulnerable	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 7.7km southeast of the site.
<i>Andersonia ferricola</i>	Shrub	White sand or red-brown loam over ironstone, seasonally wet flats	P1		Naturemap database closest record is approximately 11.8km southwest of the site collected in 1992.
<i>Schoenus sp. Jindong (R.D. Royce 2485)</i>	Sedge	Red loamy soils. Stream banks.	P1		Naturemap database closest record is approximately 6.8km southwest of the site.
<i>Actinotus whicheranus</i>	Shrub	White sand pockets over laterite	P2		Naturemap database closest record is approximately 11.6km southwest of the site collected in 2007.
<i>Leucopogon sp. Busselton (D. Cooper 243)</i>	Shrub	Variety of habitats.	P2		Naturemap database closest record is approximately 7.6km southeast of the site.
<i>Acacia inops</i>	Shrub	Black peaty sand, clay, swamps, creeks. Grows along watercourses and swamps	P3		Naturemap database closest record is approximately 24.5km west of the site.
<i>Acacia lateriticola var. Glabrous variant (B.R.Maslin 6765)</i>	Shrub	Lateritic soils	P3		Naturemap database closest record is approximately 6.9km east of the site.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Boronia capitata</i> subsp. <i>gracilis</i>	Shrub	White/grey or black sand. Winter wet swamps or hillslopes	P3		Naturemap database closest record is approximately 6.8km southwest of the site.
<i>Calothamnus lateralis</i> var. <i>crassus</i>	Shrub	Clay, winter wet areas	P3		Naturemap database closest record is approximately 11.6km southwest of the site collected in 1997.
<i>Chordifex gracillior</i>	Herb	Wet heathlands and sedgeland. Peaty sand. Swamps.	P3		Naturemap database closest record is approximately 4.3km south of the site.
<i>Cyathochaeta teretifolia</i>	Sedge	Grey sand, sandy clay, swamps, creek edges.	P3		Naturemap database closest record is approximately 4.5km south of the site.
<i>Grevillea brachystylis</i> subsp. <i>brachystylis</i>	Shrub	Black sand, sandy clay. Swampy situations.	P3		Naturemap database closest record is approximately 1.7km north of the site.
<i>Hakea oldfieldii</i>	Shrub	Red clay or sand over laterite seasonally wet flats. Ironstone.	P3		Naturemap database closest record is approximately 4.3km south of the site.
<i>Isopogon formosus</i> subsp. <i>dasylepsis</i>	Shrub	Sand, sand clay, gravelly sandy soils over laterite. Swampy areas	P3		Naturemap database closest record is approximately 3.1km north of the site.
<i>Johnsonia inconspicua</i>	Herb	White-grey or black sand. Low dunes, winter wet flats	P3		Naturemap database closest record is approximately 9.1km southwest of the site collected in 1987.
<i>Lasiopetalum laxiflorum</i>	Shrub	White grey sand, clay over laterite	P3		Naturemap database closest record is approximately 4.6km southwest of the site.
<i>Lepyrodia heleocharoides</i>	Herb	Moist peaty sand. Dry or seasonally inundated heath or woodland, swamps.	P3		Naturemap database closest record is approximately 5.2km southwest of the site collected in 1993.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Loxocarya magna</i>	Herb	Sand, loam, clay, ironstone, seasonally inundated or damp habitats.	P3		Naturemap database closest record is approximately 2.6km south of the site collected in 2000.
<i>Pimelea ciliata subsp. longituba</i>	Shrub	Grey sand over clay loam	P3		Naturemap database closest record is approximately 6.5km south of the site collected in 1950.
<i>Pultenaea pinifolia</i>	Shrub	Loams or clay, floodplains, swampy areas	P3		Naturemap database closest record is approximately 1.1km northeast of the site.
<i>Schoenus benthamii</i>	Herb	White grey sand, winter-wet flats, swamps	P3		Naturemap database closest record is approximately 7.8km southeast of the site.
<i>Synaphea decumbens</i>	Shrub	Sand over laterite	P3		Naturemap database closest record is approximately 9.6km northwest of the site collected in 1999.
<i>Synaphea hians</i>	Shrub	Sandy soils	P3		Naturemap database closest record is approximately 4.6km south of the site.
<i>Synaphea petiolaris subsp. simplex</i>	Shrub	Sandy soils, flats, winter wet areas	P3		Naturemap database closest record is approximately 2.9km south of the site collected in 1997.
<i>Acacia flagelliformis</i>	Shrub	Sandy soils and winter-wet areas	P4		Naturemap database closest record is approximately 2.9km north of the site.
<i>Acacia semitrullata</i>	Shrub	White/grey sands, sandplains and swampy areas	P4		Naturemap database closest record is approximately 5.5km west of the site collected in 1993.

Species	Lifeform	Habitat	DCBA Conservation Code	EPBC Act Status	Likelihood of occurrence in the proposed development area
<i>Calothamnus quadrifidus subsp. teretifolius</i>	Shrub	Winter-wet areas	P4		Naturemap database closest record is approximately 2.8km south of the site collected in 1997.
<i>Ornduffia submersa</i>	Aquatic Herb	Heavy clay soils that are generally inundated from winter to mid-summer	P4		Naturemap database closest record is approximately 3.4km northeast of the site collected in 1985.
<i>Stylidium leeuwinense</i>	Herb	Grey to black, peaty sand. Winter-wet habitats and depressions. Shrubland, heath, sedgeland, or low woodland	P4		Naturemap database closest record is approximately 8.2km southwest of the site.
<i>Thysanotus glaucus</i>	Herb	White, grey or yellow sand, sandy gravel	P4		Naturemap database closest record is approximately 9.2km northeast of the site.
<i>Verticordia lehmannii</i>	Shrub	Sandy clay, winter wet flats	P4		Naturemap database closest record is approximately 3.7km south of the site.

There were no Threatened flora species recorded during the field surveys. Seven *Loxocarya* sp. within the Site was unable to be confidently identified as either *L. cinerea*, or *L. magna* (Priority 3). There is difficulty in identifying *L. magna* from *L. cinerea*, in part due to the dioecious nature of this genus. The critical distinguishing features are present only in the female inflorescence although height difference can be used, with *L. cinerea* described as being 40-80cm in height and *L. magna* 70-100cm. Both the WA Herbarium (M. Hislop, pers comm 20/10/2021) and the DBCA Southwest Regional Botanist (A. Webb, pers comm 26/10/2021) agree specimens and photographs **provided are 'most likely' *L. magna***, based on the height (125 and 130 cm) and ironstone occurrence in proximity to the Site (Figure 6). Locations are illustrated in Figures 7 to 9.

Figure 6 *Loxocarya magna* (Priority 3 Flora) populations identified along North Jindong Road, Jindong

Figure 7 Possible Conservation Significant Flora locations - *Loxocarya* sp., most likely *L. magna* (Priority 3).

Figure 8 Possible Conservation Significant Flora locations - *Loxocarya* sp., most likely *L. magna* (Priority 3).

Figure 9 Possible Conservation Significant Flora locations - *Loxocarya* sp., most likely *L. magna* (Priority 3).

3.2.2 Vegetation Communities

The Protected Matters Search Tool and DBCA database search identified four EBPC Act listed Threatened Ecological Communities as occurring within 10km of the Site;

- Banksia Woodlands of the Swan Coastal Plain ecological community (Endangered)
- Shrublands on southern Swan Coastal Plain ironstones (Endangered)
- Subtropical and Temperate Coastal Saltmarsh (Vulnerable)
- Tuart (*Eucalyptus gomphocephala*) Woodlands and Forest of the Swan Coastal Plain ecological community (Critically Endangered)

An extract of the Threatened and Priority Ecological Community dataset was also obtained from DBCA, which included an additional Threatened Ecological Community listed under the BC Act and a Priority Ecological Community, not listed under the Act:

- SCP1b - *Corymbia calophylla* woodlands on heavy soils of the Swan Coastal Plain (TEC)
- Whicher Scarp B2 - West Whicher Scarp Banksia attenuata woodland (PEC)

It is likely the Site contains areas of the Threatened Ecological Community (Vulnerable) SCP1b, *Corymbia calophylla* woodlands on heavy soils of the Swan Coastal Plain (SCP1b). The TEC is known to occur <1km from the Site and some associated species of this TEC have been observed within the Site. Confirmation of the TEC presence and TEC boundaries so cannot be confirmed at this time due to the degraded condition of the vegetation.

The vegetation within the Site is not characteristic of any other Threatened or Priority Ecological Community.

3.2.3 Vegetation Condition

Utilising the scale of condition developed by Keighery (1994, Table 4), vegetation within the Site was ranked from Degraded to Completely Degraded. The vegetation within the road reserve has been severely impacted by disturbance, with signs of clearing, historic grazing and the presence of invasive weeds.

3.3 Field Survey

Site surveys were undertaken on 14 September, 5 and 14 October, 1 and 2 November by Kelly Lamp (B.Sc Hons. Nat Rs Mgmt. , FB62000182, TFL 54-2021), Lorraine Duffy (B.Sc Env Biology, B.Arts Geo, FB62000280, TFL 53-2021), Danae Plowman (B.Sc Pst Grad Dip. Engy & Env, FB62000342) and Dani Cuthbert (Dip Bus & Dip TM) to record all significant trees and any conservation significant species.

The Site was walked in a systematic manner, focusing on the proposed areas of disturbance. Zones with consistent vegetation structure and composition were noted and the main species in each of the strata were identified and recorded through relevés (Figure 10, Appendix D). All potentially suitable habitats within the Site were systematically searched for significant flora or vegetation, with specific targets being based on the Department of Biodiversity Conservation and Attractions database records.

Figure 10 Releve locations at North Jindong Road, Jindong

4 Fauna

4.1 Desktop Analysis

The conservation status of fauna within Western Australia is determined by criteria outlined within two acts of legislation: Commonwealth EPBC Act 1999 and the State-based Western Australian *Biodiversity Conservation Act 2016* (WA). The conservation codes for fauna under the *Biodiversity Conservation Act (2016)* which was previously the *Wildlife Conservation Act 1950* are presented in Appendix C. These categories are consistent with the International Union for Conservation of Nature (IUCN) classifications and therefore link into a global ranking system for taxa at risk of extinction.

A desktop study and analysis of the records of DBCA's Threatened Fauna Database, NatureMap and the Protected Matters Search Tool (PMST) (Appendix A & B) were made to determine the presence or likely presence of fauna or faunal assemblages within the Site. The analysis targets terrestrial threatened vertebrate species listed under the *Biodiversity Conservation Act 2016* (WA) and *Environmental Protection Biodiversity Conservation Act 1999* (Commonwealth). A list of fauna expected to occur within a 10-kilometre radius of the Site was compiled from searches conducted on the DBCA database (NatureMap) and the Commonwealth EPBC Protected Matters Search Tool (Table 2).

Marine species and freshwater fish have been excluded due to the location of the Site. Invertebrates have also been excluded as this is a specialist area not covered under the Scope of this report.

The results of the native fauna database search for species likely to be within or utilising the Site are listed below (Table 2).

Table 2 Conservation significant fauna species recorded within 10 km of the Site.

Species	Conservation Status		Preferred Habitat	Likelihood of occurrence within the proposed development area.
	DBC Conservation Code	EPBC Act Status		
<i>Pseudocheirus occidentalis</i> Western Ringtail Possum	Threatened	Critically Endangered	Coastal Areas of Peppermint woodland and peppermint woodland and peppermint / tuart associations	Breeding known to occur within area. Naturemap database has multiple close records approximately 1.1km north of the site collected in 2006 and 2012.
<i>Calyptorhynchus baudinii</i> Baudin's Cockatoo	Threatened	Endangered	Dense Jarrah, Karri and Marri forests. Species nest in large hollows in these species	Breeding known to occur within area. Naturemap database closest record is approximately 2.1km north of the site collected in 2006.
<i>Calyptorhynchus latirostris</i> Carnaby's Cockatoo	Threatened	Endangered	Dense Jarrah, Karri and Marri forests. Species nest in large hollows in these species	Species or species habitat known to occur within area. Naturemap database closest record is approximately 0.7km north of the site collected in 2007.
<i>Calyptorhynchus banksii subsp. naso</i> Forest Red-tailed Black Cockatoo	Threatened	Vulnerable	Dense Jarrah, Karri and Marri forests. Species nest in large hollows in these species.	Species or species habitat known to occur within area. Naturemap database closest record is approximately 2.6km east of the site collected in 2009.
<i>Dasyurus geoffroii</i> Chuditch	Threatened	Vulnerable	Variety, most dense in riparian jarrah forests. Require large, unfragmented habitats.	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 8.7km northeast of the site collected in 1987.

Species	Conservation Status		Preferred Habitat	Likelihood of occurrence within the proposed development area.
	DBCAs Conservation Code	EPBC Act Status		
<i>Botaurus poiciloptilus</i> Australasian Bittern		Endangered	Permanent freshwater wetlands with tall, dense vegetation, especially Typha spp. and rushes.	Species or species habitat likely to occur within area. Naturemap database closest record is approximately 17.9km northeast of the site.
<i>Falco hypoleucos</i> Grey Falcon		Vulnerable	Areas where annual rainfall is less than 500 mm. Known to frequent timbered lowland plains and acacia shrublands crossed by tree lined water courses. Hunts in open areas, grassland, and open woodland.	Species or species habitat may occur within area. Naturemap database closest record is over 200km northeast of the site collected in 1929.
<i>Hydromys chrysogaster</i> Water-rat, Rakali	Priority 4		Found Near permanent fresh or brackish waters, Areas of permanent fresh or brackish water, drainage swamps.	Naturemap database closest record is approximately 1.2km north of the site.
<i>Isodon fusciventer</i> Quenda, southwestern brown bandicoot	Priority 4		Forest, woodland, shrub and heath, usually in sandy soils with dense healthy vegetation in lower stratum	Naturemap database closest record is approximately 3.2km northwest of the site collected in 1967.
<i>Notamacropus irma</i> Western Brush Wallaby	Priority 4		Some areas of mallee and heathland and are uncommon in wet sclerophyll forests. Preferred habitat is Banksia woodlands.	Naturemap database closest record is approximately 7.4km northwest of the site collected in 1999.

Species	Conservation Status		Preferred Habitat	Likelihood of occurrence within the proposed development area.
	DBCAs Conservation Code	EPBC Act Status		
<i>Phascogale tapoatafa</i> subsp. <i>wambenger</i>				
South-western Phascogale	Brush-tailed	Specially Protected	Highly arboreal, prefers open forest with sparse groundcover	Naturemap database closest record is approximately 3.8km north of the site collected in 2018.

The Database identified five Threatened species, which are rare or are likely to become extinct, three Priority listed species and one other specifically protected species within a 10 km radius of the Site. The Protected Matters Search Tool identified seven threatened species, within a 10 km radius of the Site. One of which is a Critically endangered species, three Endangered species and three Vulnerable species.

Analysis of the results of the database searches show that conservation significant fauna species likely to be within or utilising the Site include *Pseudocheirus occidentalis* (Western Ringtail Possum) and *Phascogale tapoatafa* subsp. *wambenger* (South-western Brush-tailed Phascogale).

The three Black Cockatoo species, *Calyptorhynchus banksii naso* (Forest Red-tailed Black Cockatoo), *Calyptorhynchus baudinii* (**Baudin’s Cockatoo**) and *Calyptorhynchus latirostris* (**Carnaby’s Cockatoo**) or species habitat are also likely to occur within the area.

Other fauna of conservation significance may use the site infrequently or as part of a larger patch, such as birds listed on International Agreements. Impacts to these species are considered negligible due to the small area of vegetation to be managed.

4.2 Field Survey

A field study of the Site was conducted, with a focus on the species identified in the desktop analysis. The approach adopted for this survey was:

- A Satellite Image of the Site was acquired.
- A daytime visual inspection of the property and adjoining vegetation for any signs of fauna (e.g., scats, diggings, dreys, nests, burrows, feeding signs) was conducted.
- Hollow bearing trees or trees suitable for Black Cockatoos were recorded.
- Direct observations of fauna and signs of fauna were recorded using a Trimble Global Positioning System (GPS) and ArcPad® (Version 8- ESRI).
- Two, non-consecutive, nighttime spotlight surveys were conducted to determine fauna activity. A 40 w LightForce hand-held spotlight was used with white light. Observations were recorded using GPS and ArcPad®.
- Two pre-dawn and two dusk surveys were conducted to determine Black Cockatoo activity. A spotting scope was used in these surveys to identify any other birds within the Site.
- Field observations were analysed and mapped with ArcGis (ArcMap V10.6®).

The Site was traversed, and trees inspected via a physical inspection for hollows or signs of fauna usage.

All trees with large hollows were inspected for any signs of use by cockatoos. These include wear around the hollow, chewing, scarring and scratch marks on the trunks or branches. Old or recent **evidence of cockatoo's feeding**, nesting or roosting sites (feathers, droppings etc.) were also searched for.

This type of survey has minimal impact on the fauna within the Site and provides sufficient data on the presence and relative abundance and distribution of taxa. During the field surveys, the habitat at the Site was assessed to determine its potential suitability to host any of the anticipated threatened or priority **species. This approach is consistent with a Level 1 survey under the EPA's** Technical Guide: Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment (2010) which specifies a minimum requirement of background research or desktop study to gather information on the subject site and a reconnaissance survey to verify the accuracy of the background study and delineate fauna and faunal assemblages.

The survey's protocol is also consistent with the requirements outlined in the Development Planning Guidelines for Western Ringtail Possums (CALM 2003, now DBCA).

Guidelines for the three Black Cockatoo species (Department of Sustainability, Environment, Water,

Populations and Communities, 2011) outline requirements for appropriate level of surveys for these species. This survey’s intensity and design comply with these guidelines.

4.3 Results

The Site was surveyed for fauna over multiple days in October and November by Ecosystem Solutions staff Dani Cuthbert (Dip Bus & Dip TM) and Gary McMahon (B.Sc. M. Env Mgmt). The Site was traversed in a systematic manner to cover the whole area.

Dawn and dusk / nocturnal surveys were conducted for any sign of Black Cockatoos, Western Ringtail Possums and any other conservation listed species, as described in Table 3.

Table 3 Fauna survey times and observations

Survey Type	Date and Time	Sunrise / Sunset Time	Observations
Dawn	18 October 2021 4:20 am to 6:30 am	Sunrise 5:32 am	No Black Cockatoos, Western Ringtail Possums or other significant fauna were observed during this survey.
Dawn	1 November 2021 4:15 am to 6.20 am	Sunrise 5:17 am	No Black Cockatoos, Western Ringtail Possums or other significant fauna were observed during this survey.
Dusk Nocturnal	13 October 2021 5:30 pm to 8:45 pm	Sunset 6:30 pm	Seven Western Ringtail Possums and one Brush Tail Possum were observed. No Black Cockatoos or other significant fauna were observed during this survey.
Dusk Nocturnal	31 October 2021 5:45 pm to 8:45 pm	Sunset 6:45 pm	Five Western Ringtail Possums were observed. No Black Cockatoos were observed during this survey.
Day	2 nd November 2021	N/A	One Western Ringtail Possum observed within the canopy of a Marri Tree.

Daytime fauna surveys were conducted in September (14th), October (5th, 13th, 14th and 31st) and November (1st and 2nd).

The canopy of the vegetation within the Site was thoroughly inspected and eight potential drey were

observed (Figures 11 & 12). Dreys were located predominantly within remnant Peppermint woodland to the north of the Site and adjacent to Minchin Road and the soak to the east.

Trees on site with a diameter at breast height (DBH) over 500 mm and having capacity to support nesting of any Black Cockatoo species were recorded (Figures 13 to 24). A total of 1,284 of potentially significant trees were recorded, with 14 having hollows and 44 having potential hollows. No animals were observed utilising these trees during the dawn or dusk/nocturnal surveys.

Two Forest Red-tailed black cockatoos (*Calyptorhynchus banksii naso*) were observed foraging on Marri trees close to Releve 1 and an intersecting road to the west of North Jindong Road on 14 September. While three White tailed black cockatoos (*Calyptorhynchus baudinii/ latirostris*) were also observed on the same day within the Site (Figure 20).

All local species of Black cockatoos can forage over extensive areas (up to 15-20 kms from their nesting sites (Saunders, 1980)) and given that there are larger areas of preferred habitat within their range, it could be assumed that Black Cockatoo species are not relying on the Site for habitat or food source.

Twelve Western Ringtail Possums were observed during the two nocturnal surveys on the 13th and 31st October and one Western Ringtail Possum was observed on the 2 November during a day survey. The locations of the Western Ringtail Possums are shown in Figures 11 and 12.

While no other animals of significance were observed, either directly or through signs, the lack of this data should not be taken directly as an indication that those species are absent from the Site. No trapping or seasonal sampling was conducted.

Table 5 and Table 6 discuss the likely presence and impact on Black Cockatoos.

The bird species protected under international agreements were not seen during the surveys.

The Carter's Freshwater Mussel, Dunsborough and Margaret River Burrowing Crayfish, Blue Billed Duck, and Rakali were not observed nor was the species habitat observed within the site. There are no wetlands or permanent water body within the Site. It is unlikely these species are within the Site

5 Survey Constraints

Field surveys were confined to five-day flora surveys, two dawn fauna surveys and two dusk / nocturnal fauna spotlight surveys conducted over non-consecutive night. These were conducted to assess for Black Cockatoo and Western Ringtail Possum activity, along with any other conservation significant fauna and flora. All surveys were conducted using an experienced ecologist, with a head torch and a single hand-held spotlight used for the dusk and dawn / nocturnal fauna surveys.

The Site was traversed by foot in systematically.

All large trees of suitable size were examined from the ground for the presence of hollows. Guidelines for the survey techniques for Black Cockatoo species (Dept. of Sustainability, Environment, Water Populations and Communities, 2011) state that all trees with a DBH of over 500 m should be inspected. It should be noted however, that all the prerequisites that determine the suitability of a hollow for use by cockatoos is difficult to assess. In addition to entrance size, the depth, floor, and orientation of the hollow are important factors. The presence of suitable hollows, even in breeding areas, does not make them available for breeding as hollows must be spatially, structurally, and temporally correct (Johnstone and Johnston, 2004). The listing of potential nesting hollows is therefore likely to be an over estimation of those suitable.

Short term surveys for Black Cockatoo presence are unlikely to give a true representation of habitat use by black cockatoos due to the mobile nature of these birds and their reliance on different areas of habitat at different times of the year and between years (Commonwealth of Australia, 2012).

Western Ringtail Possums are arboreal nocturnal species (DBCA, 2017). They use up to 2-7 rest sites and up to 20 throughout the year. Rest sites can be within a tree hollow or drey, built in various tree canopies. In suburban areas, they may also rest in roof spaces and other dark cavities. Their home range is less than 5 ha. There are constraints in surveying Western Ringtail Possums due to the time they may arise from their rest site. Their home range may also overlap the survey area, with a rest site being used outside the Site during survey times.

Constraints in flora monitoring include annual species that do not appear every season or every year, with survey limited to identifying only those flora that appear during survey times.

Flora surveys were completed in September and October, an optimal time for many flowering species however this timing may have been outside the predominate flowering time for other flora species, which limits identification of all flora within the Site.

6 Significance

Under the EPBC Act, an action that has, will have, or is likely to have, a significant impact on a matter of national environmental significance, requires approval from the Minister. A significant impact is defined as an impact which is important or of consequence, having regard for its context or intensity (Commonwealth of Australia, 2009).

Matters of environmental significance are:

- Listed threatened species and ecological communities
- Migratory species protected under international agreements
- Ramsar wetlands of international importance
- The Commonwealth marine environment
- World Heritage properties
- National Heritage places
- Great Barrier Reef Marine Park, and
- Nuclear actions.

For this development, there is a limited potential for impact on threatened species. Significant Impact Guidelines 1.1 (Commonwealth of Australia, 2009) lists significant impact criteria for the assessment for activities which may impact on threatened species. Table 4 below describes these criteria as they relate to the Site and the vulnerable species that may potentially be impacted within the Site.

Table 4 Significant Impact Criteria for Key Protected Species

Significant Impact Criterion	Discussion		Meets Criterion
	Black Cockatoo Species	Western Ringtail Possum (WRP)	
Lead to a long-term decrease in the size of an important population ¹ of a species	Black Cockatoos were heard during survey and foraging was identified at two locations within the Site. No Cockatoos were observed nesting or roosting within the Site. It is unlikely the Site, independently, is critical to survival of the species. Any trees to be removed can be selected to retain those with observed or potential hollows.	A population of Western Ringtail Possums reside on the Site, with twelve individuals and eight potential dreys sighted within the road reserve. During the clearing works, an approved DBCA fauna handler will be engaged to relocate any captured fauna within 200m of a capture point. This will reduce the likelihood of a long-term decline in population.	No
Reduce the area of occupancy of an important population	No Black Cockatoos were observed nesting or roosting within the Site. A slight reduction in foraging habitat will occur, however trees with DBH >500mm will be retained wherever possible within the road reserve, with a focus on the trees with observed or potential hollows.	A slight reduction of remnant vegetation will occur; however, there will still be connectivity within the road verge.	No

¹ An 'important population' is a population that is necessary for a species' long-term survival and recovery.

Fragment an existing important population into two or more populations	No population was observed nesting or roosting within the Site. Trees will be retained wherever possible within the road verge, with a focus on the trees with observed or potential hollows.	It is unlikely any actions will fragment the current population. There will still be connectivity within the road verge. With the presence of an approved DBCA Fauna Handler during any vegetation modification the likelihood of a long-term decline in population in the Site is low as any captured animal will be released within 200 m of capture point.	No
Adversely affect habitat critical to the survival of a species	No population was observed nesting or roosting within the Site. Trees will be retained wherever possible within the road verge, with a focus on the trees with observed or potential hollows.	Unlikely to significantly affect critical habitat.	No
Disrupt the breeding cycle of an important population	No Black Cockatoos were observed nesting or roosting within the Site. Trees will be retained wherever possible within the road verge, with a focus on the trees with observed or potential hollows.	Western Ringtail Possums breed year-round with breeding peaks in April to July and September to November (Jones <i>et al.</i> 1994b). Any disturbance within the Site will attempt to avoid the peak breeding periods. A population of Western Ringtail Possums reside within the Site, with the presence of an approved DBCA Fauna Handler during any vegetation modification the likelihood of any disruption to breeding is low and will be minimised with timing of any vegetation removal.	No

Modify, destroy, remove or isolate or decrease the availability or quality of habitat to the extent that the species is likely to decline	Black Cockatoos appear to forage at the Site opportunistically. The species will be impacted through a reduction in available foraging material. This can be minimised by retaining significant trees where possible.	A population of Western Ringtail Possums reside within the Site. The vegetation modification needed will not likely cause the population to decline.	No
Result in invasive species that are harmful to a vulnerable species becoming established in the vulnerable species' habitat	No introductions are likely to occur with good Dieback hygiene measures for vehicles utilised at the Site.	No introductions are likely to occur with good Dieback hygiene measures for vehicles utilised at the Site.	No
Introduce disease that may cause the species to decline	Highly unlikely to occur.	Highly unlikely to occur.	No
Interfere substantially with the recovery of the species.	Development will not impact substantially on the recovery of the species. Where possible, the retention of significant trees with hollows or potential hollows, with DBH >500mm will minimise impact.	Development will not impact substantially on the recovery of the species.	No

Using these criteria, the proposed development will not significantly impact on any significant species to a point where a referral is required under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act).

Referral guidelines for three threatened Black Cockatoo species (Commonwealth of Australia, 2011) uses a decision tree and a set of criteria to determine whether actions significantly impact on Black Cockatoos. These are set out in Table 5, based on the details of the development and the data obtained from the surveys.

Table 5 Assessment of Significant Impact to Black Cockatoo

Question	
1. Could the impacts of your action occur within the modelled distribution of the Black Cockatoos?	Yes - Action occurs within the distribution area of all three species. Trees within the road verge will be retained wherever possible, with a focus on retaining trees with a DBH >500mm with observed or potential hollows.
2. Could the impacts of your action affect any Black Cockatoo habitat or individuals?	No signs of animals nesting or roosting within the Site. Trees with a DBH greater than 500mm with identified or potential hollows will be retained within the road verge wherever possible.
3. Have you surveyed for Black Cockatoos using the recommended methods?	Yes.
4. Could your actions have an impact on Black Cockatoos or their habitats?	Unlikely impact. No signs of animals roosting or nesting were observed within the Site.
5. Is your impact mitigation best practice so that it may reduce the significance of your impacts on Black Cockatoos?	Yes. No 'significant impact' is anticipated due to lack of evidence of roosting or nesting within the proposed areas of impact within Site.

Question

6. Could your action require a referral to the federal environmental Minister for significant impact on Black Cockatoos? No, as there are no direct signs of any of the three species breeding or roosting within the Site. It is unlikely that the species is dependent on the Site.

The summary of these responses is:

- The development is within the area of modelled distribution of Black Cockatoo and Western Ringtail Possums.
- The Site has been surveyed using the recommended methods from the guideline.
- Two Black cockatoos were observed foraging within the site and Black Cockatoos were heard passing over the Site at the time of survey.
- There were eight potential dreys and twelve Western Ringtail Possums observed within the Site.
- 1284 Significant trees with a DBH greater than 500mm, 14 with observable hollows and 44 with potential hollows were recorded in the Site. These should be prioritised for conservation wherever possible.

Using the flow chart and criteria it is determined that there is a low risk of actions resulting in an impact upon Black Cockatoos and Western Ringtail Possums within the Site.

7 Summary and Recommendations

Based on the results of the analysis of Site, the following conclusions and recommendations are made.

- It is likely the Site contains areas of the Threatened Ecological Community (Vulnerable) *Corymbia calophylla woodlands on heavy soils of the Swan Coastal Plain* (SCP1b). The TEC is known to occur <1km from the Site and some associated species of this TEC have been observed within the Site. Confirmation of the TEC presence and TEC boundaries are outside the scope of this report so cannot be confirmed at this time.
- One Priority 3 species, *Loxocarya magna* was observed during the flora surveys.
- Two new populations likely to be *Loxocarya magna* (Priority Three) were identified within the road reserves of North Jindong Road. (Figure 7).
- Two Black cockatoos were observed foraging within the Site and Black Cockatoos were also heard passing over the Site at the time of survey (Figure 19). There were no signs of nesting or roosting within the Site.
- A total of 1284 Significant trees with hollows or sufficient diameter at breast height (DBH) to develop future hollows suitable for Black Cockatoos were identified within the Site. It is recommended the trees with hollows or potential hollows (Figures 11 - 22, Appendix E) be retained where possible.
- Under Table 3: Referral guidelines of the currently endorsed Black Cockatoo Guidelines (2012), a referral under the EPBC Act is not required.
- Under Commonwealth Significant Impact Guidelines for Threatened Species (2013), it is determined that there is a low risk of actions resulting in an impact upon Western Ringtail Possums, a referral under the EPBC Act is not required.
- Should any disturbance of the vegetation within the site be required, an authorised Fauna Spotter with a Section 40 Authorisation under the Biodiversity Conservation Act 2016 should be on site to manage any fauna that may be present to ensure their effective and safe management during the disturbance.

Conservation Codes
 T - Rare or likely to become extinct
 X - Presumed extinct
 IA - Protected under international agreement
 S - Other specially protected fauna
 1 - Priority 1
 2 - Priority 2
 3 - Priority 3
 4 - Priority 4
 5 - Priority 5

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

Appendix B EPBC Act Protected Matters Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about [Environment Assessments](#) and the EPBC Act including significance guidelines, forms and application process details.

Report created: 02/09/21 15:21:04

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	4
Listed Threatened Species:	63
Listed Migratory Species:	43

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	1
Commonwealth Heritage Places:	None
Listed Marine Species:	62
Whales and Other Cetaceans:	13
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	9
Regional Forest Agreements:	1
Invasive Species:	25
Nationally Important Wetlands:	None
Key Ecological Features (Marine)	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar)	[Resource Information]
Name	Proximity
Vasse-wonnerup system	Within 10km of Ramsar

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Name	Status	Type of Presence
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area
Shrublands on southern Swan Coastal Plain ironstones	Endangered	Community likely to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community may occur within area

Listed Threatened Species [Resource Information]

Name	Status	Type of Presence
Birds		
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area
Calyptorhynchus baudinii Baudin's Cockatoo, Long-billed Black-Cockatoo [769]	Endangered	Breeding known to occur within area
Calyptorhynchus latirostris Carnaby's Cockatoo, Short-billed Black-Cockatoo [59523]	Endangered	Species or species habitat known to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat may occur within

Name	Status	Type of Presence area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Critically Endangered	Species or species habitat likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area
Phoebastria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Crustaceans		
Engaewa reducta Dunborough Burrowing Crayfish [82675]	Critically Endangered	Species or species habitat known to occur within area
Fish		
Nannatherina balstoni Balston's Pygmy Perch [66698]	Vulnerable	Species or species habitat known to occur within area
Mammals		

Name	Status	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Dasyurus geoffroi Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat likely to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Congregation or aggregation known to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
Pseudocheirus occidentalis Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Breeding known to occur within area
Other		
Westralunio carteri Carter's Freshwater Mussel, Freshwater Mussel [86266]	Vulnerable	Species or species habitat known to occur within area
Plants		
Banksia nivea subsp. uliginosa Swamp Honeypot [82766]	Endangered	Species or species habitat known to occur within area
Banksia squarrosa subsp. argillacea Whicher Range Dryandra [82769]	Vulnerable	Species or species habitat known to occur within area
Brachyscias verecundus Ironstone Brachyscias [81321]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia busselliana Bussell's Spider-orchid [24369]	Endangered	Species or species habitat known to occur within area
Caladenia hoffmanii Hoffman's Spider-orchid [56719]	Endangered	Species or species habitat may occur within area
Caladenia huegelii King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat may occur within area
Caladenia procera Carbunup King Spider Orchid [68679]	Critically Endangered	Species or species habitat known to occur within area
Caladenia viridescens Dunsborough Spider-orchid [56776]	Endangered	Species or species habitat known to occur within area
Chamelaucium sp. S coastal plain (R.D.Royce 4872) Royce's Waxflower [87814]	Vulnerable	Species or species habitat known to occur within area
Daviesia elongata subsp. elongata Long-leaved Daviesia [64883]	Vulnerable	Species or species habitat known to occur within area
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area

Name	Status	Type of Presence
Drakaea elastica Glossy-leaved Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat may occur within area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat known to occur within area
Eucalyptus x phylacis Meelup Mallee [87817]	Endangered	Species or species habitat may occur within area
Gastrolobium papilio Butterfly-leaved Gastrolobium [78415]	Endangered	Species or species habitat may occur within area
Grevillea brachystylis subsp. grandis Large-flowered Short-styled Grevillea [85001]	Critically Endangered	Species or species habitat known to occur within area
Lambertia echinata subsp. occidentalis Western Prickly Honeysuckle [64528]	Endangered	Species or species habitat likely to occur within area
Petrophile latericola Laterite Petrophile [64532]	Endangered	Species or species habitat likely to occur within area
Synaphea sp. Fairbridge Farm (D. Papenfus 696) Selena's Synaphea [82881]	Critically Endangered	Species or species habitat may occur within area
Tetraria australiensis Southern Tetraria [10137]	Vulnerable	Species or species habitat likely to occur within area
Verticordia densiflora var. pedunculata Long-stalked Featherflower [55689]	Endangered	Species or species habitat likely to occur within area
Verticordia plumosa var. ananeotes Tufted Plumed Featherflower [23871]	Endangered	Species or species habitat known to occur within area
Verticordia plumosa var. vassensis Vasse Featherflower [55804]	Endangered	Species or species habitat likely to occur within area
Reptiles		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sharks		
Carcharias taurus (west coast population) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat known to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area

Name	Status	Type of Presence
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Listed Migratory Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Migratory Marine Birds		
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat may occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Foraging, feeding or related behaviour known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Foraging, feeding or related behaviour likely to occur within area
Phoebastria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Name	Threatened	Type of Presence
Migratory Marine Species		
Balaena glacialis australis Southern Right Whale [75529]	Endangered*	Breeding known to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Caperea marginata Pygmy Right Whale [39]		Species or species habitat may occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat may occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Manta alfredi Reef Manta Ray, Coastal Manta Ray, Inshore Manta Ray, Prince Alfred's Ray, Resident Manta Ray [84994]		Species or species habitat may occur within area
Manta birostris Giant Manta Ray, Chevron Manta Ray, Pacific Manta Ray, Pelagic Manta Ray, Oceanic Manta Ray [84995]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Congregation or aggregation known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Migratory Wetlands Species		

Name	Threatened	Type of Presence
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat likely to occur within area
Other Matters Protected by the EPBC Act		
Commonwealth Land		[Resource Information]
The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardea ibis Cattle Egret [59542]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat likely to occur

Name	Threatened	Type of Presence within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat may occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Phoebastria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area

Name	Threatened	Type of Presence
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area
Puffinus carneipes Flesh-footed Shearwater, Fleishy-footed Shearwater [1043]		Species or species habitat likely to occur within area
Sterna anaethetus Bridled Tern [814]		Foraging, feeding or related behaviour likely to occur within area
Sterna caspia Caspian Tern [59467]		Foraging, feeding or related behaviour known to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thinornis rubricollis Hooded Plover [59510]		Species or species habitat may occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat likely to occur within area
Fish		
Acentronura australe Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area
Campichthys galei Gale's Pipefish [66191]		Species or species habitat may occur within area
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Hippocampus subelongatus West Australian Seahorse [66722]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Lissocampus fatiloquus Prophet's Pipefish [66250]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys meraculus Western Crested Pipefish [66259]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammals		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat may occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
Reptiles		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known

Name	Threatened	Type of Presence to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Whales and other Cetaceans		[Resource Information]
Name	Status	Type of Presence
Mammals		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Caperea marginata Pygmy Right Whale [39]		Species or species habitat may occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Congregation or aggregation known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area

Name	State
South West WA RFA	Western Australia

Invasive Species [\[Resource Information \]](#)

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resources Audit, 2001.

Name	Status	Type of Presence
Birds		
Anas platyrhynchos Mallard [974]		Species or species habitat likely to occur within area
Columba livia Rock Pigeon, Rock Dove, Domestic Pigeon [803]		Species or species habitat likely to occur within area
Streptopelia senegalensis Laughing Turtle-dove, Laughing Dove [781]		Species or species habitat likely to occur within area
Sturnus vulgaris Common Starling [389]		Species or species habitat likely to occur within area
Mammals		
Bos taurus Domestic Cattle [16]		Species or species habitat likely to occur within area
Canis lupus familiaris Domestic Dog [82654]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Felis catus Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur within area
Feral deer Feral deer species in Australia [85733]		Species or species habitat likely to occur within area
Mus musculus House Mouse [120]		Species or species habitat likely to occur within area
Oryctolagus cuniculus Rabbit, European Rabbit [128]		Species or species habitat likely to occur within area
Rattus rattus Black Rat, Ship Rat [84]		Species or species habitat likely to occur within area
Sus scrofa Pig [6]		Species or species habitat likely to occur within area
Vulpes vulpes Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
Asparagus asparagoides Bridal Creeper, Bridal Veil Creeper, Smilax, Florist's Smilax, Smilax Asparagus [22473]		Species or species habitat likely to occur within area
Brachiaria mutica Para Grass [5879]		Species or species habitat may occur within area
Cenchrus ciliaris Buffel-grass, Black Buffel-grass [20213]		Species or species habitat may occur within area
Chrysanthemoides monilifera Bitou Bush, Boneseed [18983]		Species or species habitat may occur within area
Chrysanthemoides monilifera subsp. monilifera Boneseed [16905]		Species or species habitat likely to occur within area
Genista monspessulana Montpellier Broom, Cape Broom, Canary Broom, Common Broom, French Broom, Soft Broom [20126]		Species or species habitat likely to occur within area
Genista sp. X Genista monspessulana Broom [67538]		Species or species habitat may occur within area
Lycium ferocissimum African Boxthorn, Boxthorn [19235]		Species or species habitat likely to occur within area
Olea europaea Olive, Common Olive [9160]		Species or species habitat may occur within area
Pinus radiata Radiata Pine Monterey Pine, Insignis Pine, Wilding Pine [20780]		Species or species habitat may occur within area
Rubus fruticosus aggregate Blackberry, European Blackberry [68406]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Tamarix aphylla Athel Pine, Athel Tree, Tamarisk, Athel Tamarisk, Athel Tamarix, Desert Tamarisk, Flowering Cypress, Salt Cedar [16018]		Species or species habitat likely to occur within area

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

Appendix C Conservation Codes for Western Australian Flora and Fauna (DBCA, Jan 2018)

CONSERVATION CATEGORY
CODE

Threatened species (T)

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under Section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

Threatened fauna is that subset of ‘Specially Protected Fauna’ listed under Schedules 1 to 3 of the Wildlife Conservation (Specially Protected Fauna) Notice 2018 for Threatened Fauna.

Threatened flora is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the Wildlife Conservation (Rare Flora) Notice 2018 for Threatened Flora.

The Assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below

Critically endangered species (CR)

Threatened species considered to be **“facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the criteria set out in the ministerial guidelines”**.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

Endangered species (EN)

Threatened species considered to be **“facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines”**.

Listed as endangered under Section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

CONSERVATION CODE	CATEGORY
-------------------	----------

Vulnerable species (VU)	<p>Threatened species considered to be “facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines”.</p> <p>Listed as endangered under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i> for vulnerable fauna or the <i>Wildlife Conservation (Rare Flora) Notice 2018</i> for vulnerable flora.</p>
Extinct species (EX)	<p>Species where “there is no reasonable doubt that the last member of the species has died”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).</p> <p>Published as presumed extinct under schedule 4 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i> for extinct fauna or the <i>Wildlife Conservation (Rare Flora) Notice 2018</i> for extinct flora.</p>
Extinct in the wild species (EW)	<p>Species that “is known only to survive in cultivation, captivity or as a naturalised population well outside its part range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).</p> <p>Currently there are no threatened fauna or flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.</p>
<u>Specially protected species</u>	<p>Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.</p> <p>Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.</p>

CONSERVATION CATEGORY
CODE

Migratory species (MI)	<p>Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (Section 15 of the BC Act).</p> <p>Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and the Republic of Korea (ROKAMBA), and fauna subject to the <i>Convention on the Conservation of Migratory Species of Wild Animals</i> (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements of treaties, excluding species that are listed as Threatened species.</p> <p>Published as migratory birds protected under an international agreement under schedule 5 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i>.</p>
Species of special conservation interest (conservation dependent fauna) (CD)	<p>Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).</p> <p>Published as conservation dependent fauna under schedule 6 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i>.</p>
Other specially protected species (OS)	<p>Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).</p> <p>Published as other specially protected fauna under schedule 7 of the <i>Wildlife Conservation (Specially Protected Fauna) Notice 2018</i>.</p>

CONSERVATION CATEGORY
CODE

Priority species (P) Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1 - Poorly-known species - Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases, or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2 - Poorly-known species - Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

CONSERVATION CATEGORY
CODE

Priority 3 - Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4 - (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.

Rare, Near Threatened and other species in need of monitoring (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.

(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.
