

Environmental survey

Verge vegetation – 17 Burton Rd Darlington

5 January 2023

Photos 1-3 (above): Vegetation along the verge at 17 Burton Rd, Darlington. The area is dominated by watsonia weeds, with some small grass trees and *Corymbia calophylla* (Marri) saplings approximately 10-15cm DBH. No significant vegetation found within the clearing permit area and the alignment should be able to avoid the majority of native vegetation.

Photos 4 & 5 (above): Vegetation on the southern side of Burton Rd, surrounding power pole S186623. The vegetation that would be impacted by the clearing for the utility installation is weedy grasses, watsonia and polygala. No significant vegetation identified.
