

Red: Extent of works (Plan of Kyowa Rockbag installation) - Area 44 sq-m (**0.0044 Hectares**)

Green: Actual area of vegetation to be removed - Area 09 sq-m (**0.0009 Hectares**)

Identification of species present within destroyed revetment geocells.

A: Spinifex longifolia – Compromised overhanging along length.

B: Olearia axillaris – single plant,

C: Leucocyphyta Brownii – single plant

All native 'not threatened' species - Approximate total area = 9 sq-m

The installation of the Kyowa rockbags is within, and replaces, the footprint of the failed geocells.

All vegetation above the geocell installation (1,6m high in four layers) will be retained.
