

### **Arboriculture advice for WA Country Builders**

**Date:** 23<sup>rd</sup> of June 2022

**Location:** Lot 67, 42 Pardalote Road VASSE WA 6280

**Tree Species:** Corymbia calophylla(Marri)

Tree Height: 14m

Tree DBH: 1.28m

#### **Reason for Assessment**

In accordance with your instructions, I confirm that you have employed this consultant to carry out a ground-based tree assessment of a mature Corymbia calophylla located at the front left-hand side of a newly constructed dwelling. The tree was retained during the development process due to the native cockatoo's inhabiting the area. The main reason for the assessment is to assess the trees defects and level of risk to the assets/residents that reside below.

This consultant has been to site (23<sup>rd</sup> June 2022) and has photo evidence attached to this document, of the condition of the tree at the time of this submission.

## **Observations**

- This mature species of Corymbia calophylla has had a severe trunk failure in its past.
- Weakened regrowth of around 9m high has occurred from this trunk failure.
- Trunk has a lean of approximately 70 degrees north towards the asset
- Trunk has severe decay from ground level to approximately 4.5m high on the tension side of the tree, ranging from 400mm wide to 805mm wide.
- Evidence of white ants present, but no living insects found at the time of inspection
- Marri canker present
- Some damage to bark and cambium which is consistent with machine collision.
- The asset below a high target area with occupancy being "constant".
- Useful life expectancy is limited due to the main trunk failure and large portion of decay present.

## Recommendations

Remove to ground level and replant same species in a more appropriate location. This
consultant cannot find any grounds for tree retention on this occasion due to target
occupancy and tree health.

# **Photos:**

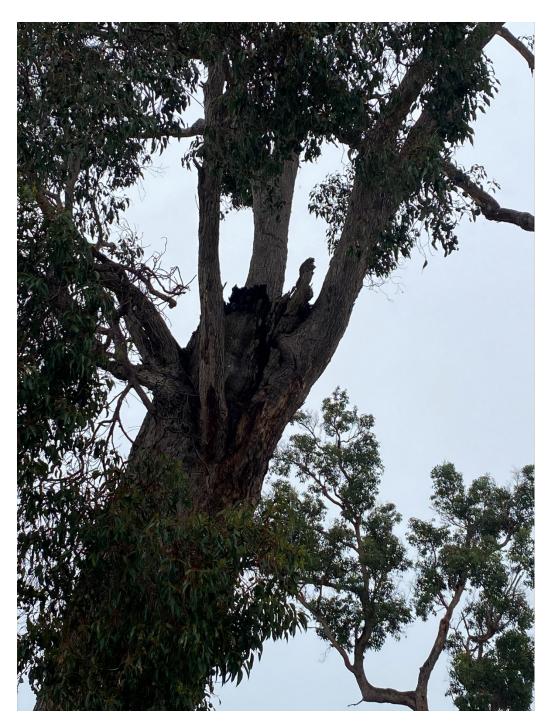

Photo 1: Evidence of major failure to trunk. Weak connections on regrowth also present.

Photo 2: Photo showing the lean towards the North.

Photo 3: Showing the large section of decay on tension side of tree.

Photo 4: Closer photo showing the large section of decay and depth on tension side of tree.

Photo 5: Patches of Marri canker present.

Photo 6: Overall photo of tree from western side of property. Slightly uneven canopy.

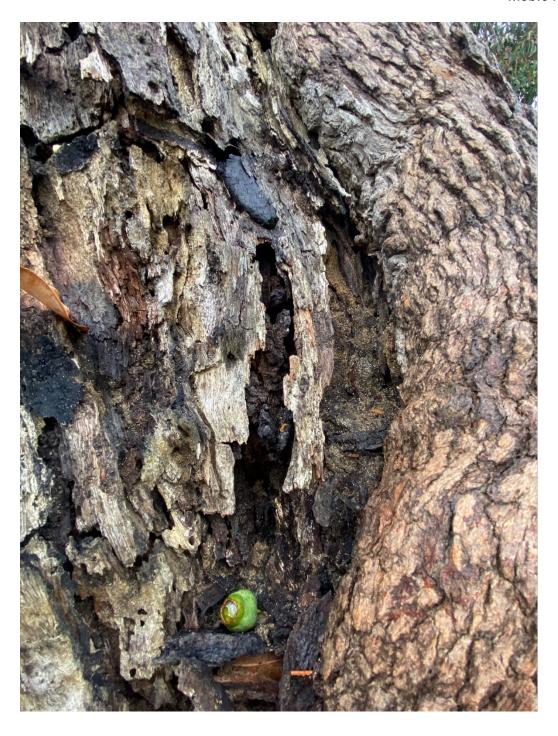

Photo 6: White ant damage

Sincerely,

Mitchell Howlett - Cert III & V Arborist

Norcape Tree & Contracting Services Pty Ltd

#### Limitation of liability

Trees can be managed, but they cannot be controlled. To live or work near a tree involves a degree of risk.

This report only covers identifiable defects present at the time of the inspection. Norcape Tree & Contracting Services accepts no responsibility and cannot be held liable for any structural defect or unforeseen event/situation or adverse weather conditions that may occur after the time of inspection. Norcape Tree & Contracting Services cannot guarantee that the tree/s contained within this report will be structurally sound under all circumstances and is not able to detect every condition that may possibly lead to the structural failure of a tree. Norcape Tree & Contracting Services cannot guarantee that the recommendations made will categorically result in the tree being made safe. Unless specifically mentioned their report will only be concerned with above ground inspections, as such all observations have been visually assessed from ground level. Trees are living organisms and as such cannot be classified as safe under any circumstances. Trees fail in ways that the arboriculture industry does not fully understand. The recommendations are made on the basis of what can be reasonably identified at the time of inspection therefore Norcape Tree & Contracting Services accepts no liability for any recommendations made.
